Evolution of BRICS

The leaders of BRIC (Brazil, Russia, India, and China) countries met for the first time in St. Petersburg, Russia, on the margins of the G8 Outreach Summit in July 2006. Shortly afterwards, in September 2006, the group was formalized as BRIC during the 1st BRIC Foreign Ministers' Meeting, which met on the sidelines of the General Debate of the UN Assembly in New York City. After a series of high-level meetings, the 1st BRIC summit was held in Yekaterinburg, Russia on 16 June 2009.

The BRIC group was renamed as BRICS (Brazil, Russia, India, China, South Africa) after South Africa was accepted as a member at the BRIC Foreign Ministers' Meeting in New York in September 2010. Accordingly, South Africa attended the 3rd BRICS Summit in Sanya, China on 14 April 2011.

BRICS is an important grouping bringing together the major emerging economies of the world, comprising 41% of the world population,¹ having 24% of the world GDP¹ and over 16% share in the world trade.¹ BRICS countries have been the main engines of global economic growth over the years. Over a period of time, BRICS countries have come together to deliberate on important issues under the three pillars of political and security, economic and financial, and cultural and people-to-people exchanges.

BRICS Joint Statistical Publication (JSP)

A strong need was felt to put all the important data of BRICS countries on a single platform and disseminate it for the mutual benefit of all these countries during the Foreign Ministers Meeting of Brazil, Russia, India and China held at the 64th General Assembly of the United Nations, 2009. The first edition of the BRICS Joint Statistical Publication (BRICS JSP) was released in 2010. Since then, every year one of the BRICS countries brings out this publication. The release of the publication is essential and fundamental to develop the statistical cooperation mechanism among the BRICS countries. The publication is the result of annual joint efforts of the NSOs of Brazil, Russia, India, China and South Africa.

The JSP provides comprehensive statistical data of main socio-economic indicators of five countries. To date, 13 issues of the BRICS JSP have been released by NSOs of BRICS countries.

BRICS JSP – Snapshot

During the 12th Meeting of Heads of BRICS National Statistical Agencies held on 14 December 2020 in virtual format under the Russia chairship, a proposal was moved by ROSSTAT, Russia to develop a new format of statistical publication (mini JSP version) that could engage a wider range of users. All the BRICS member countries agreed on the proposal.

¹ Based on World Bank data (2019).

A shorter version of the JSP was developed in 2021 by the National Statistical Office of Ministry of Statistics & Programme Implementation, Government of India under India's chairship of BRICS 2021. The shorter version of the BRICS JSP – Snapshot was discussed in the 12th Technical Meeting of National Statistical Offices of BRICS held on 24 February 2021. Based on the agreed content and format, NSO, India released a shorter version of the BRICS JSP (BRICS JSP – Snapshot 2021) along with BRICS Joint Statistical Publication, 2021 at the 13th Meeting of Heads of NSOs of BRICS Countries held in October 2021. This was continued in the subsequent year as well under the chairship of China for BRICS 2022.

BRICS NSO Cooperation

To bring out the Joint Statistical Publication and JSP – Snapshot of BRICS Countries, it has been a practice to hold the following two meetings by the NSOs of BRICS chairship.

- **“Technical Meeting of National Statistical Offices of BRICS Countries”** is held first to finalize the timelines of various activities and statistics pertaining to the JSP. It is generally held in the first half of the year.
- As per the agreed timelines, NSOs of the BRICS countries would provide the requisite data/inputs to the host country for compilation of the JSP. Based on the inputs and vetting done by the respective BRICS NSOs, the BRICS JSP and BRICS JSP Snapshot are released in **“Meeting of Heads of NSOs of BRICS Countries”** which is held during the second half of the year.

Themes of Heads of NSOs of BRICS Countries Meetings

Every year, a theme is decided by the host country for the meeting of Heads of NSOs of BRICS Countries. The purpose of the meeting is to share best practices and experiences, challenges amongst the member countries as well as to explore the feasibility to enhance the capacity building of the member countries through cooperation. Year-wise themes of meetings of Heads of NSOs of BRICS Countries held to date are given below:

S. No.	Year	Host Country	Themes
1	2010	Brazil	Current state and trends of official statistics development
2	2011	China	Households surveys
3	2012	India	Sampling approach in statistical surveys
4	2013	South Africa	Small areas estimation
5	2014	Brazil	Review of social indicators system
6	2015	Russia	Capacity of the countries to produce indicators for measurement of sustainable development
7	2016	India	Industrial Statistics
8	2017	China	Digital and new economy

9	2018	South Africa	Building of statistical capabilities to support SDG indicators and Planning for 2020 round of Census
10	2019	Brazil	Meeting not held
11	2020	Russia	Digital agenda for Official Statistics
12	2021	India	Efforts of NSOs on monitoring of SDGs
13	2022	China	Applications of Big Data in Official Statistics
14	2023	South Africa	Statistics for the Future

Publication Chapters

The BRICS JSP comprises 15 chapters, which are given below. The first chapter of the BRICS JSP contains a comparison of member countries on selected indicators/statistics on various domains like population, labour force, national accounts, industry, trade, etc. Thereafter, the remaining chapters contain a summary of selected indicators of member countries and also contain the country sheet of detailed statistics/indicators. The chapterization of the BRICS JSP is given below:

- (i) General Information, Economic and Social Indicators Comparison of BRICS Countries
- (ii) Population
- (iii) Labour Force
- (iv) National Accounts
- (v) Price Indices
- (vi) People's Living Standard
- (vii) Resources and Environment
- (viii) Industry
- (ix) Energy
- (x) Agriculture, Forestry, Animal Husbandry and Fishery
- (xi) Transport
- (xii) Information and Communication Technology
- (xiii) Finance
- (xiv) External Economic Relations
- (xv) Tourism

Towards the end of the publication, a brief overview of the statistical systems of all the BRICS countries and status of the monitoring framework of SDGs Indicators are provided.

The BRICS JSP is a public document and is an important tool in furthering the spirit of BRICS partnership amongst the people of BRICS countries.

Chapter 1

General information, economic
and social indicators comparison
of BRICS countries

Table 1.1 - General Information on BRICS Countries – 2022

	Area of territory (1000 sq. km)	Capital city	Mid-year population (million persons)	Population density (persons per sq. km)	National currency
Brazil	8 510 ⁽¹⁾	Brasília	214.8	25.2	Real - R\$
Russia	17 125	Moscow	146.7 ⁽²⁾	8.6 ⁽²⁾	Rouble - Rub
India	3 287	New Delhi	1 379.7 ⁽³⁾	419.7 ⁽³⁾	Rupee - ₹
China	9 600	Beijing	1 412.2	147.1	Renminbi - RMB
South Africa	1 221	Pretoria	60.6	49.6	Rand - ZAR

Footnotes

Specific footnotes and sources of data may be seen from the respective chapters of the indicators. Some data are provisional (P) and budget estimates (BE).

Brazil

- (1) Information about the mid-year population and demographic indicators were obtained by a projection of the population by sex and age groups by the component method for the period 2000–2060.
- (6) Population 15 years old and older. Brazilian Institute of Geography and Statistics - IBGE.
- (13) Data are derived from quarterly GDP results.
- (15) Gross domestic expenditure on R&D as percentage of GDP. Data are from UIS database.

Russia

- (2) Based on the All-Russian Population Census 2020 results.
- (7) Before 2017 data on population 15–72 years, since 2017 on population 15 years and older.
- (11) According to ILO methodology.
- (19) The aggregate index by economic activities “Mining and quarrying”, “Manufacturing”, “Electricity, gas, steam and air conditioning supply”, “Water supply, water removal, waste management and activity on liquidation of pollution”.
- (20) Proportion of internal research and development expenditure to GDP.
- (24) Calculations of Gini Index are based on household budget sample surveys and macroeconomic average per capita monetary income data.
- (28) Since 2017 – steel production including unalloyed, stainless, alloyed other steel in ingots or other primary forms and semi-finished products from the above types of steel are taken into account.
- (30) Since 2020 – dewatered, demineralized and stabilized petroleum, including natural gas liquids.
- (32) Since 2010 – including natural and associated gas.
- (35) Fruits (excluding nuts), berries and grapes.
- (36) Livestock and poultry for slaughter.
- (38) Catch of fish and other live wild aquatic organisms.
- (40) Length of public paved roads in operation (including highways). At the end of the year.
- (44) Before and including 2013 – the aggregate index by economic activities “Mining and quarrying”, “Manufacturing”, “Electricity, gas and water production and supply”; since 2014 – by economic activities “Mining and quarrying”, “Manufacturing”, “Electricity, gas, steam and air conditioning supply”, “Water supply, water removal, waste management and activity on liquidation of pollution”.
- (P) Preliminary data.

India

- (3) Projected population as on 1st July 2022 based on Census 2011.
- (4) For the period 2018–20.
- (5) For the period 2016–20.
- (8) Share of labour force that belong to the population of the age group 15 years and older.
- (9) Estimates are based on PLFS. July 2021 – June 2022.
- (14) GDP in US\$ is computed using average Real Exchange Rate taken from RBI's website (link: <https://dbie.rbi.org.in>). The average is based on the data for the period April 1st to March 31st of the FY. Data relate to new base year (2011–12).
- (18) The Consumer Price Index of India pertains to Combined Sector. Information for 2014–2021 is based on the current series of CPI with Base (2012 = 100).
- (21) Information as on 1.4.2021.
- (27) Provisional Data. Information is as per financial year.
- (29) Data pertain to calendar year. Figures are provisional.
- (31) Provisional data.
- (33) The period of agricultural year is from July (of the year indicated in the table) to June (next year).
- (34) As per third advance estimates 2022–23.
- (37) The data pertain to March (of the year indicated in the table) to February (next year).
- (39) Estimated figure.
- (41) The information is as on 31st March of the year indicated in the table. The information on highways includes both national and state highways (excluding rural roads, project roads, urban roads, etc.).

- (42) Reference period is financial year, i.e. April of the year indicated in the table to March of the next year. International operations were carried as per DGCA circular dated 26-03-2020.

China

- (10) Share of number of employed persons to national population.
(12) Urban Surveyed Unemployment Rate.
(15) GDP and Per Capita GDP in US dollars are converted using the annual average exchange rates.
(16) Data of GDP are calculated at producers' prices.
(17) Preliminary data.
(22) Government appropriation for education to GDP.
(23) Total expenditure on health as percentage of GDP.
(25) Data of Gini coefficient are based on per capita annual disposable income.
(30) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.

South Africa

- (26) Gini is per capita expenditure excluding taxes.
(43) This includes gold.

Footnotes

Brazil

(1) Data derived from Population Projection by Sex and Age for the Period 2000–2060 and 2010–2060. Review 2013 and 2018.

(4) Urban percentage estimated by linear interpolation for the intercensal period 2000–2010 and designed by the methodology of the United Nations from 2010. These results are not derived from population projection.

Russia

(7) Based on the All-Russian Population Census 2020 results.

India

(2) For 2000, information pertains to projected population as on 1st July based on the Report of Population projections for India and States 1991–2016 based on Census 1991. For 2011–2022, the information pertains to projected population is as on 1st July based on Report of Population projections for India and States 2011–2036 based on Census 2011.

China

(3) Data in 2000 and 2020 are estimated from National Population Census respectively. Data in 2015 are estimated from the National 1% Population Sample Survey. The other data are estimated from annual national sample survey on population changes. Data 2012–2019 are revised according to the data of 2020 census. For historical data, please refer to the new version. Statistical discrepancies on totals and relative figures due to rounding are not adjusted here.

South Africa

(5) Population estimation series not active in 2000. Population figures cannot be verified.

(6) Population estimation series does not split population into rural/urban.

Statistics South Africa.

Footnote

(1) For South Africa, Natural Increase is expressed as a percentage year on year and not per 1000.

Explanatory Notes

General Notes

Total population (Mid-Year): Information about the population in half of the year was obtained by a projection of the population by sex and age groups by the component method. This method consists of working out separately each component of population dynamics of the population: fertility, mortality and migration.

Sex ratio: Expressed as the number of males for every 100 females. It is obtained from the ratio of the male and female populations by age group.

Crude marriage rate: The nuptiality rate is obtained by dividing the number of marriages of spouses 15 years of age or older by the population of this same age group multiplied by a thousand.

Total fertility rate: The total fertility rate expresses the number of children who, on average, would be born to a woman belonging to a hypothetical cohort of women during their fertility life (15–49 years) that had their children according to the fertility rates by age study period, and were not exposed to the risk of mortality from birth to the end of the fertile period.

Infant mortality rate: The infant mortality rate is defined as the number of deaths of infants under one year of age (per thousand live births) in a given geographical area and time period, and is interpreted as the estimated risk of a born live to die during their first year of life.

Natural Increase Rate of Population: The rate of natural increase is obtained by the difference between the crude birth rates and mortality.

Crude Birth rate: Number of Births per 1000 population in a given year. This definition excludes foetal deaths.

Crude Death Rate: Number of Deaths per 1000 population in a given year.

Expectation of life at birth: Average number of years a newborn child is expected to live under current mortality conditions.

Under-five mortality rate: (according to WHO methodology): The probability of dying of a child born in a specific year before reaching the age of five, expressed per 1000 live births.

Crude divorce rate: Refers to ratio of divorced couples to the annual average population for the reference year. The formula is:

Crude divorce rate = (Number of couples divorced for the reference year × 1000) / Annual Average Population

Dependency rate: number of people aged 0–15 and 60 and older to the population 15–59.

Census: A canvass of a given area, resulting in an enumeration of the entire population and often the compilation of other demographic, social and economic information pertaining to that population at a specific time.

Russia

The information on births, deaths, marriages and divorces is received on the basis of annual processing of data contained in the records of Civil Registrar Offices.

Mortality rate for children under 5 years of age (according to WHO methodology) is the probability of death of a child born in a certain year before reaching 5 years of age. Determined per 1000 live births.

India

Neonatal Mortality Rate: Number of infant deaths less than 29 days of life per thousand live births.

Number of victims of intentional homicide: Number of victims registered under murder (Section 302 IPC).

Footnotes

Brazil

- (1) Population 15 years old and older.
- (6) Industry activities: manufacturing, mining and quarrying, electricity, gas and water supply.

Russia

- (2) Before 2017 data on population 15–72 years, since 2017 on population 15 years and older.
- (7) Including: Agriculture, forestry, animal husbandry and fishery. Data are provided according to NACE Rev. 2, data for 2000 – according to NACE Rev.1.
- (10) Including: Mining and quarrying, manufacturing and electricity, gas and water supply, construction. Data are provided according to NACE Rev. 2, data for 2000 – according to NACE Rev.1.
- (11) Other economic activities not included in the primary and secondary sectors of the economy. Data are provided according to NACE Rev. 2, data for 2000 – according to NACE Rev.1.

India

- (3) Share of Labour Force belong to the population of the age group 15 years and older.
- (8) The information is based on usual activity status taking into account both principal and subsidiary activity.
- (9) Primary: industry includes Agriculture, forestry and fishing, Mining & Quarrying; Secondary: Industry includes Manufacturing, Construction, Electricity Gas & Water, etc.; Tertiary industry includes Trade, hotel and restaurant, Transport, storage and communication and Other services.

China

- (4) Share of number of employed persons to national population.
- (5) The total number of employed persons since 2011 is revised according to the *7th National Population Census*.

Source

Ministry of Statistics and Programme Implementation. NSS Survey Reports: Employment and Unemployment Situation in India (various issues) for the estimates corresponding to the periods 2000, 2012. For 2018, 2019, 2020, 2021 and 2022, the estimates are obtained from the Annual Report, Periodic Labour Force Survey (PLFS, 2017–18, 2018–19, 2019–20, 2020–21 & 2021–22). These results are not comparable to the earlier estimates on account of a change in sampling methodology.

Footnotes

The information is based on Sample Surveys conducted by National Sample Survey Office & pertains to the Survey Period July (Previous Year) to June (Year Indicated in the table). For example, information for the year 2000 pertains to survey period July 1999 to June 2000. The information is based on Usual Activity Status taking into account both Principal & Subsidiary activity.

(1) There is some population in the age group of 0–14 (especially in the age group of 10–14) which is also employed.

(2) For 2018, 2019, 2020, 2021 and 2022 figures are estimated on the basis of PLFS 2017–18, 2018–19, 2019–20 & 2020–21, 2021–22 and Report of Technical Committee on Population Projections for the States of India, 2011–2036. Office of Registrar General of India.

Statistics South Africa. Labour Force Survey (Statistical release P0210) and Quarterly Labour Force Survey (Statistical release P0211).

Footnotes

- (1) 2000 data are for the September wave only (not annual figures) since the March wave was a pilot.
(2) 2015 estimates are from the 2013 Master Sample.

Explanatory Notes:

General notes

1 Labour Force: Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. This is for a particular reference period.

2 Unemployment Rate (UR): UR is defined as the number of persons unemployed per 1000 in the labour force (which includes both employed and unemployed).

3 Workers (or employed persons): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reasons of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers.

4 Activity status, Labour Force, Employment, Unemployment: It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during the reference period:

(i) Working or being engaged in economic activity.

(ii) Being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available.

(iii) Being not engaged in any economic activity (work) and also not available for work. Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in the labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employed' and 'unemployed' respectively.

Primary Sector: of industries includes Agriculture, Forestry & Fishing and Mining & Quarrying.

Secondary Sector: of industries includes Manufacturing, Electricity, Gas & Water Supply and Construction.

Tertiary Sector: of industries includes other industries of national economy.

Brazil

Reference Week is the last complete week of September each year.

Work

It was considered as work in the exercise of economic activity:

a) Occupation paid in cash, products, goods or benefits (housing, food, clothes, etc.) in the production of goods and services.

b) Occupation paid in cash or benefits (housing, food, clothes, etc.) in domestic services.

c) Occupation without pay in the production of goods and services, performed at least one hour per week:

– Helping a member of the household who had work as: employee in the production of primary goods (which includes the activities of agriculture, forestry, livestock, vegetable or mineral extraction, hunting, fishing and fish farming); or own account or employer in any activity;

– Helping in a religious, charitable or cooperative institute; or

– As apprentice or trainee; or

d) Occupation developed for at least one hour per week:

– In the production of goods of the branch that includes the activities of agriculture, forestry, livestock, vegetal extraction, fishing and fish farming, for own consumption or for the consumption of at least one member of household; or

– In construction of buildings, private roads, wells and other improvements (except only repairs work) for their own use or for the use of at least one member of the household.

Employed person: A person who performed some work during all or part of the reference week. It is also included as employed persons who have not exercised their paid work during the reference week due to vacation, leave, strike, etc.

Unemployed person: A person without work which had taken specific action to seek work (getting in touch with employers; enrolling or going for official examination for a government job; registration at employment agency, union or similar body, placing or answering job advertisement; seeking assistance of relative, friend or colleague to find a job; taking an action to start a business; etc.) in the reference week.

The New Household Sample Survey of IBGE (PNAD Continuous)

The National Household Sample Survey: PNAD was an annual survey and was discontinued in 2015. The PNAD was replaced with updated methodology by the Continuous National Household Sample Survey — PNAD Continuous.

PNAD Continuous is a quarterly survey and started in 2012. There are important methodological differences between PNAD and PNAD Continuous. Therefore, the results of these two surveys are not comparable. Thus, the results of the PNAD were erased and replaced by those of PNAD Continuous. PNAD Continuous started with the labour force investigation, associated with basic demographic and educational information. Gradually other supplementary themes and topics were aggregated.

According to the rotation scheme adopted by PNAD Continuous, a housing unit stays in the sample for five quarters; it is then withdrawn from the sample. Some supplementary themes and topics are surveyed in the determined interviews in all four quarters of the year, and others are concentrated in the determined quarter of the year.

Housing characteristics are investigated in housing units which are being interviewed for the first time in each of the four quarters of the year, and information and communicating technologies characteristics are concentrated in the fourth quarter of the year. So, both themes started being surveyed in 2016.

Data on the labour force are presented in accordance with Resolution 1 of the 19th International Conference of Labour Statisticians. The numbers of the labour force include data on employed and unemployed persons based on the results of the quarterly household sample survey.

Until 2019, the annual results of the PNAD were generated with information from the interviews carried out in dwellings that were in the sample for the first time in each of the four quarters of the year. Between 2020 and 2022, these results were generated with information from the interviews carried out in dwellings that were in the sample for the fifth time in each of the four quarters of the year.

Russia

Data on the labour force are presented in accordance with the standards of the International Labour Organization. The number of the labour force includes data on employed and unemployed persons based on the results of labour force surveys. Before 2017 the monitoring of the labour force was carried out for persons 15–72 years old, since 2017 it is carried out for persons 15 years and older.

India

The National Sample Survey Office, Ministry of Statistics & Programme Implementation carries out surveys on the subject of employment and unemployment and labour force characteristics at National and State levels.

The survey was earlier conducted quinquennially, along with some annual surveys in between. Considering the importance of availability of labour force data at more frequent time intervals, the National Statistical Office launched the Periodic Labour Force Survey (PLFS) in 2017. The survey is conducted on a quarterly basis. The reference period is usually July–September, October–December, January–March and April–June. The report includes status based on Usual Activity (Reference Period 365 days), Current Weekly Status (Reference Period 7 days).

Usual principal activity status: The usual activity status refers to the activity status of a person during the reference period of 365 days preceding the date of the survey. The activity status on which a person spent relatively longer time during the 365 days is considered as the usual principal activity status of the person.

Usual subsidiary economic activity status: A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person.

Usual activity status considering principal and subsidiary status taken together: The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during the 365 days preceding the date of survey.

Unemployed: Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' or unemployed.

China

Employed persons: refer to persons above a specified age who had labour capacity and performed some social work for compensation or business gains. Specifically, it refers to all persons, aged 16 and older, who performed some work for compensation or business gains for one hour or more during the reference period; or who had work units or sites but were temporarily not at work during the reference period.

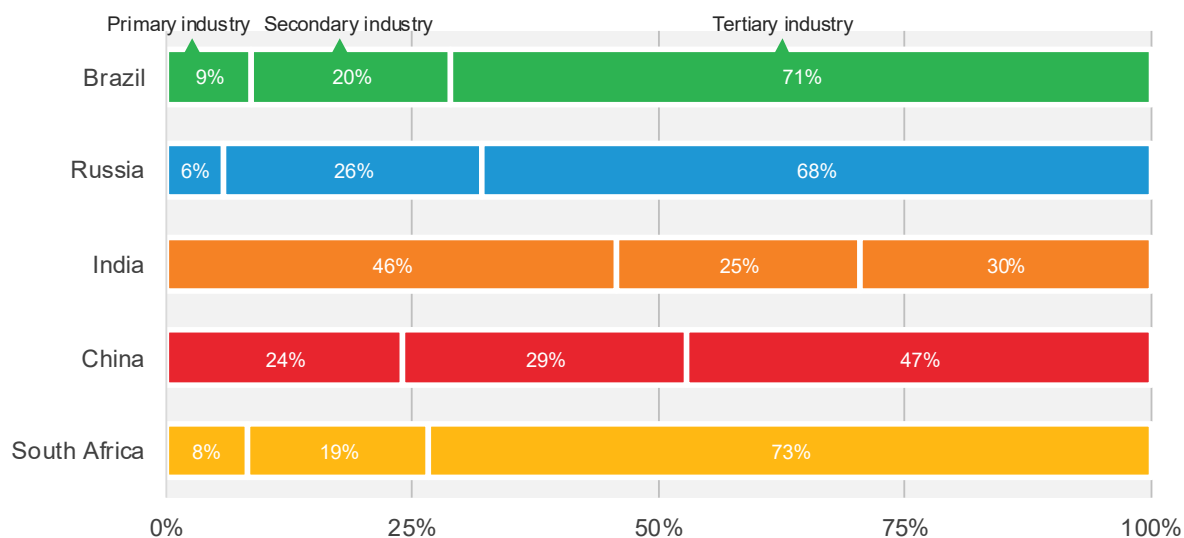

Registered unemployed persons in urban areas: refer to persons with non-agricultural household registration at certain working ages (16 years old to retirement age), who are capable of working, unemployed and willing to work, and have been registered at the local employment service agencies to apply for a job.

Surveyed unemployment rate in urban areas: refers to the ratio of the number of unemployed persons in urban areas to the sum of the number of employed persons and unemployed persons in urban areas, calculated on the basis of the Labour Force Survey.

3.1 Share of Labour Force to population 15 years and over (%)

3.2 Share of employed persons in the primary, secondary and tertiary industry (2022) to total employed persons (%)

Primary Sector: involved in the mining/growing/farming of raw materials
 Secondary Sector: involved the processing & packaging of raw materials
 Tertiary Sector: Includes the distribution of processed goods (& occasionally raw goods) for sale, as well as the sale of the goods. It also includes the service sector.

Footnotes

(1) Data contain changes due to: implementation of an international methodology for the evaluation of housing services produced and consumed by homeowners; estimation of fixed capital consumption based on its current market value; harmonization of data on exports and imports with balance of payments data; updating of data on the development of the "Input-output" base tables for 2011 and 2016 and on the results of Agricultural Census of 2016; including the assessment of services for domestic workers, as well as the implementation of the 2008 SNA statements on estimation of research and development results and weapons systems and use of the services of the Central Bank of the Russian Federation.

(2) Gross value added by economic activity at basic prices. Before 2011, year data are presented according to NACE 1 Classification of economic activities, since 2011 according to NACE 2 Classification.

Sources

National Bureau of Statistics of China.

Footnotes

(1) GNI in US dollars are converted using the annual average exchange rates.

(2) The components of GDP by production approach are calculated at producers' prices.

(3) China economic activities are categorized into three strata of industries according to the "Three Strata of Industries Classification Regulations" enacted by NBS in 2018, and historical data are revised accordingly. Three strata of industry in China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery industries (except support service activities to agriculture, forestry, animal husbandry and fishery industries). Secondary industry refers to mining and quarrying (except auxiliary activities of mining and quarrying), manufacturing (except repairs for metal products, machinery and equipment), production and supply of electricity, steam, gas and water, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

Footnotes

(1) Data for 2022 are derived from quarterly GDP results.

(2) Base year 2015 = 100.

(3) Primary industries = Agriculture, forestry and fishing, and Mining and quarrying.

(4) Secondary industries = Manufacturing; Electricity, gas and water, and Construction.

(5) Tertiary industries = Wholesale, retail and motor trade, catering and accommodation; Transport, storage and communication; Finance, real estate and business services; General government; and Personal services.

General notes

National product by definition is a measure in monetary terms of the volume of all goods and services produced by an economy during a given period of time, accounted without duplication. The measure obviously has to be in value terms as the different units of production and different measures of services are not directly added. In the case of a closed economy, the measure amounts to domestic product (Gross Domestic Product).

Gross national income (GNI)

GNI = GDP + compensation of employees and property income receivable from the rest of the world – compensation of employees and property income payable to the rest of the world.

Government final consumption expenditure

Government final consumption expenditure comprises the compensation of employees and purchases of goods and services by the government, including purchases abroad. Compensation of employees of general government consists of wages and salaries and social security contribution.

Brazil

The Brazilian System of National Accounts reference 2010, as established by international recommendations, is in accordance with the new manual of the System of National Accounts 2008, SNA 2008.

Expenditure measure of GDP: The expenditure measure of gross domestic product (GDP) is derived as the sum of expenditure on final consumption plus gross capital formation plus exports less imports.

Gross fixed capital formation: in a particular category of fixed asset consists of the value of producers' acquisitions of new and existing products of this type less the value of their disposals of fixed assets of the same type.

Gross fixed capital formation: is measured by the total value of a producer's acquisitions, less disposals of fixed assets during the accounting period plus certain specified expenditure on services that adds to the value of non-produced assets.

Gross capital formation: shows the acquisition less disposal of produced assets for purposes of fixed capital formation, inventories or valuables.

Expenditures on goods and services: are defined as the values of the amounts that buyers pay, or agree to pay, to sellers in exchange for goods or services that sellers provide to them or to other institutional units designated by the buyers.

Goods and services account: The goods and services account shows the balance between the total goods and services supplied as resources to the economy as output and imports (including the value of taxes less subsidies on products not already included in the valuation of output) and the use of the same goods and services as intermediate consumption, final consumption, capital formation and exports.

Final consumption expenditure: is the amount of expenditure on consumption goods and services.

Household final consumption expenditure: consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant and including consumption of goods and services acquired abroad.

General government final consumption expenditure: consists of expenditure, including expenditure whose value must be estimated indirectly, incurred by general government on both individual consumption goods and services and collective consumption services.

Final consumption expenditure of NPISHs consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident NPISHs on individual consumption of goods and services and possibly on collective consumption services.

Inventories: are produced assets that consist of goods and services, which came into existence in the current period or in an earlier period, and that are held for sale, use in production or other use at a later date.

Primary industry: Agriculture, Forestry, Animal Husbandry and Fishery.

Secondary industry: Mining, Manufacturing, Electricity, Gas and Water and Construction.

Tertiary industry: The other industries of national economy.

Russia

Primary industry: Agriculture, Forestry, Animal Husbandry and Fishery. Before 2011, year data are presented according to NACE 1 Classification of economic activities, since 2011 according to NACE 2 Classification.

Secondary industry: Mining, Manufacturing, Electricity, Gas and Water Supply and Construction. Before 2011, year data are presented according to NACE 1 Classification of economic activities, since 2011 according to NACE 2 Classification.

Tertiary industry: the other industries of national economy. Before 2011, year data are presented according to NACE 1 Classification of economic activities, since 2011 according to NACE 2 Classification.

Gross domestic product (GDP): at market prices is the final result of the production activity of all producer units within a country area. It may be estimated using three methods: production, use of incomes (or expenditure method) and GDP formation by income sources. GDP, measured by production method, is defined as the difference between total output of goods and services for the whole economy on the one hand, and intermediate consumption on the other, or otherwise as a sum of value added in the sectors of the economy. GDP, measured by the method of use of incomes, represents a sum of expenditures of all the institutional units – residents for final consumption, gross capital formation and net exports. GDP calculated on the basis of income sources reflects primary incomes accumulated in the process of production by all institutional units grouped by sectors of the economy.

Final consumption expenditures: comprise final consumption expenditures of households, final consumption expenditures of public administration on individual goods and services and collective services, final consumption expenditures of non-profit institutions serving of households.

Gross capital formation: indicates net acquisition by resident units of goods and services produced in the current period or imported, but not consumed in that period. Gross capital formation includes gross fixed capital formation, changes in inventories, as well as net acquisition of valuables.

Net exports of goods and services: are calculated as a difference between exports and imports and include trade turnover of Russia with foreign countries.

India

The National Statistical Office (NSO) in the Ministry of Statistics and Programme Implementation compiles estimates of various macro-economic aggregates and publishes them in its annual publication called National Accounts Statistics. The estimates are based on performance during the financial year (April–March [of the next year]). NSO brings out Provisional Estimates for a particular financial year in May each year, with a time lag of two months. Besides, the NSO also brings out First Revised Estimates in February for the preceding year along with revision of estimates for two previous financial years using detailed and more comprehensive data. The NSO also compiles Advance Estimates for the current financial year and releases it two months before the close of the year. Various aggregates brought out by the NSO include GDP, NDP, GNI, and NNI, Product and Production taxes and subsidies, Consumption of Fixed Capital, Net National Disposable Income, Personal Disposable Income, Private Final Consumption Expenditure (PFCE), Government Final Consumption Expenditure (GFCE), exports and imports, Gross & Net Capital Formation, Savings, etc.

The economy of India is not closed as there are transactions with the rest of the world in the form of exports, imports, loans, etc. This gives rise to the concept of national or domestic. Gross Domestic Product refers to production of all resident units within the borders of a country, which is not exactly the same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad.

Conversely, some production taking place within a country may be attributed to temporary and seasonal foreign labour.

Net Domestic Product (NDP) = Gross Domestic Product (GDP) - Consumption of Fixed Capital (CFC)

GNI = GDP + compensation of employees and property income receivable from the rest of the world – compensation of employees and property income payable to the rest of the world

Net National Income (NNI) = Gross National Income (GNI) - Consumption of Fixed Capital (CFC)

Final consumption expenditure: includes both Private Final Consumption Expenditure & Government Final Consumption Expenditure.

Private final consumption expenditure: The household consumption expenditure referred to as private final consumption expenditure (PFCE) in National Accounts Statistics (NAS) consists of expenditure by households and non-profit institutions serving households on durable, semi-durable and non-durable consumer goods and services.

Government final consumption expenditure: Government final consumption expenditure comprises the compensation of employees paid and purchases of goods and services by the government used for production of non-market services. Compensation of employees of general government consists of wages and salaries.

Final consumption rate: is the total Final Consumption expenditure expressed as a per cent of Gross Domestic Product at Market Prices (Current Prices).

Gross capital formation Rate: is the total Gross Capital Formation expressed as a per cent of Gross Domestic Product at Market Prices (Current Prices).

Valuables are produced goods of considerable value that are not used primarily for purposes of production or consumption, but are held as stores of value over time.

The following categorization has been used for industry-wise estimates in the case of India:

Primary Sector: of industries includes Agriculture, Forestry & Fishing and Mining & Quarrying.

Secondary Sector: of industries includes Manufacturing, Electricity, Gas & Water Supply and Construction.

Tertiary Sector: of industries includes other industries of the national economy.

China

Gross domestic product (GDP): refers to the final products at market prices produced by all resident units in a country (or a region) during a certain period of time. In the practice of national accounting, GDP is calculated from three approaches, namely production approach, income approach and expenditure approach, which reflect GDP and its composition from different angles.

Per capita GDP = GDP / annual average population.

Three strata of industry: in China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery industries (except support service activities to agriculture, forestry, animal husbandry and fishery industries). Secondary industry refers to mining and quarrying (except auxiliary activities of mining and quarrying), manufacturing (except repairs for metal products, machinery and equipment), production and supply of electricity, steam, gas and water, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

Indices of GDP: measure the change of GDP at constant prices. GDP at constant prices converts GDP based on the current price into a value based on the price of the base period. When adjusted for price changes, the values of two different periods can be compared to reflect changes of both products and production activities.

GDP by expenditure approach: refers to the method of measuring the final results of production activities of a country (region) during a given period from the perspective of final uses. It includes final consumption expenditure,

gross capital formation and net export of goods and services. The formula for computation is: GDP by expenditure approach = final consumption expenditure + gross capital formation + net export of goods and services.

Final consumption expenditure: refers to the total expenditure of resident units for purchases of goods and services from both the domestic economic territory and abroad to meet the needs of material, cultural and spiritual life. It does not include the expenditure of non-resident units on consumption in the economic territory of the country. The final consumption expenditure is broken down into household consumption expenditure and government consumption expenditure.

Gross fixed capital formation: refers to the value of acquisitions less those disposals of fixed assets during a given period. Fixed assets are the assets produced through production activities with unit value above a specified amount and which could be used for over one year. Natural assets are not included.

Gross fixed capital formation can be categorized into total tangible fixed capital formation and total intangible fixed capital formation. Total tangible fixed capital formation includes the value of the construction projects and installation projects completed and the equipment, apparatus and instruments purchased (less those disposed) as well as the value of land improved, the value of draught animals, breeding stock and animals for milk, for wool and for recreational purposes and the newly increased forest with economic value. Total intangible fixed capital formation includes the prospecting of minerals and the acquisition of computer software minus the disposal of them.

Changes in inventories: refer to the market value of the change in the physical volume of inventory of resident units during a given period, i.e. the difference between the values at the beginning and at the end of the period minus the gains due to the change in prices. The changes in inventories can have a positive or a negative value. A positive value indicates an increase in inventory while a negative value indicates a decrease in inventory. The inventory includes raw materials, fuels and reserve materials purchased by the production units as well as the inventory of finished products, semi-finished products and work-in-progress.

Net export of goods and services: refers to the exports of goods and services subtracting the imports of goods and services. Exports include the value of various goods and services sold or gratuitously transferred by resident units to non-resident units. Imports include the value of various goods and services purchased or gratuitously acquired resident units from non-resident units. Because the provision of services and the use of them happen simultaneously, the acquisition of services by resident units from abroad is usually treated as import while the acquisition of services by non-resident units in this country is usually treated as export. The exports and imports of goods are calculated at FOB.

Final consumption rate: refers to final consumption expenditures as percentage of gross domestic product by expenditure approach.

Gross capital formation rate: refers to gross capital formation as percentage of gross domestic product by expenditure approach.

South Africa

Base year 2010=100.

Primary industries = Agriculture, forestry and fishing; and Mining and quarrying.

Secondary industries = Manufacturing; Electricity, gas and water; and Construction.

Tertiary industries = Wholesale, retail and motor trade, catering and accommodation; Transport, storage and communication; Finance, real estate and business services; General government; and Personal services.

Footnotes

- (1) The information for 2013–2022 is based on current series of CPI (Combined sector) with Base (2012 =100).
- (2) Food and Beverages group comprise the following 12 subgroups of CPI viz. "Cereals and products", "Meat and fish", "Egg", "Milk and products", "Oils and fats", "Fruits", "Vegetables", "Pulses and products", "Sugar and confectionery", "Spices", "Non-alcoholic beverages" and "Prepared meals, snacks, sweets, etc."
- (3) Miscellaneous group comprise the following 6 subgroups viz. "Household goods and services", "Health", "Transport and communication", "Recreation and amusement", "Education", "Personal care and effects".
- (4) General index corresponds to all the six group indices of CPI for combined sector.
- (5) The consumer price index numbers for industrial workers for the year 2000 is based on base year 1982 and from 2006 to August. 2020 is based on base year 2001. The series was updated with new base year 2016 w.e.f. September 2020.
- (6) Annual average for 2020 and 2021 have been worked out by converting index from September, 2020 onwards to base 2001 using linking factor of 3.00 (Food), 2.41 (Fuel & Light), 4.01 (Housing), 1.98 (Clothing & Footwear), 2.28 (Medical care), 1.79 (Education, recreation and amusement), 2.51 (Transport & Communication) and 2.88 (General) for All-India. In the new series, items have been classified based on COICOP classification, Food and Clothing, Bedding & Footwear groups have been renamed as Food & Beverages and Clothing & Footwear groups respectively. Similarly, Medical care has been renamed as Health and Education, recreation and amusement has been made two distinct subgroups namely Recreation & Entertainment and Education.
- (7) The information for the year 2000 relates to base year 1993–1994 and for the year 2005 to 2012 relates to base year 2004–2005 and index for the year 2013 onwards relate to base year 2011–12.

Footnotes

(1) Data on components of CPI of 2000 are not available since the classification of CPI was revised in 2001. Due to the revision of the components of CPI in 2016, some of the names and contents of the CPI classification have been changed and the related data are incomparable with the historical data.

(2) Producer price indices of industrial products refer to the prices of industrial products when they leave factories.

(3) Price indices for agricultural products refer to that for food processing industry of agricultural products.

(4) Price indices for raw materials refer to the purchasing price indices for raw materials, fuels, and power.

Footnotes

- (a) CPI – Consumer price indices.
- (b) PPI – Producer price indices.
- (c) Break in series, all indices prior to 2008 not official indices. Linking factors used to calculate continuous time series. Linking factors: Consumer Price Indices (all items, preceding year = 100); Consumer Price Indices Grouped by Urban Area; Consumer Price Indices Grouped by Rural Area; Housing Indices; Food Indices; Electricity; Clothing Indices; Rent Indices.
- (1) December 2016 = 100.
- (2) All items headline measure from 2000 to 2008 based on primary areas, currently based on primary and secondary areas.
- (3) Includes all housing, i.e. rental, owners' equivalent rent, utilities and maintenance. Electricity excluded (2000–2007). Change in method of calculation in owner-occupied housing from 2008.
- (4) Food only (does not include non-alcoholic beverages).
- (5) Includes electricity and other solid and liquid fuels.
- (6) Year 2020 = 100.
- (7) Discontinued in December 2012.
- (8) Introduced in January 2013, history starts from January 2012. Base month December 2020 = 100.

Explanatory Notes

General notes

The retail price is defined as money cost to the consumer of a specified unit of sale which is inclusive of all rebates and discounts, etc.

Consumer price index (CPI): It indicates time fluctuations of retail prices of goods and services purchased by the consumers for non-production consumption within a specified period of time. It is a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing price changes in retail trade and service establishments and also in commodity, mixed and food market as well as on data of actual structure of consumer expenditures of households for the previous year.

Producer price index: It measures the average changes in producers' prices over a period of time. It represents bulk transaction generally at the early stage of trading. The price pertaining to bulk transactions may have divergent nomenclatures, e.g. farm harvest prices, wholesale prices, procurement prices, support prices, administered prices, import prices, forward prices, etc. Wholesale price index relates to the transactions at the primary stage which broadly correspond to producer prices.

Brazil

The Brazilian Institute of Geography and Statistics (IBGE) is the government organisation responsible for the computation of the Extended National Consumer Price Index (IPCA), which is the official and main inflation indicator of the country. IPCA is used by the Central Bank to monitor objectives set in the inflation targets system. The index is computed on a monthly basis and refers to families inhabiting in urban localities, with monthly income, from any source, ranging from 1 (one) to 40 (forty) minimum wages. The geographical coverage of the index encompasses 16 areas. The indicator ensures a coverage of approximately 90% of urban areas in the geographical scope of the research.

The index tracks the movement of prices of a fixed basket of goods and services consumed by households, conceived from the Household Budget Survey (Pesquisa de Orçamentos Familiares – POF), which depicts the consumption habits of Brazilian families. The weights applied to the calculation of the current consumer price indices of IBGE are based on the Household Budget Survey (POF) conducted in 2017/2018.

Apparel includes clothing (female, male and child); footwear and accessories; jewels and trinkets; fabrics and haberdashery.

Russia

Consumer price indices: (CPI) indicates time fluctuations of prices on goods and services purchased by the consumers for non-production consumption within a specified period of time. It measures a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing level of prices in retail trade, service and catering establishments and markets as well as on data of actual structure of consumer expenditures of households for 2 previous years.

CPI is computed for the urban population and it is diffused for the whole population.

Producer price indices: (PPI) for industrial goods are compiled on the basis of recording prices for representative goods (services) produced by 10 thousand basic (key) organisations covered by the survey. Average prices and price indices are calculated for more than 1200 representative goods (services) since 2020. Producer prices are actual prices for produced and shipped goods (services rendered) provided for selling on the domestic market (except indirect taxes). PPI calculated for representative goods (services) shall be gradually aggregated into indices of corresponding types, kinds, classes and divisions of economics activities. Data on the volume of shipment in value terms of the base period are being used as the weight factors.

India

Consumer Price Index: measures a change over time in prices of a fixed basket of goods and services consumed by a household. CPI is widely used as a macroeconomic indicator of inflation, as a tool by governments and central banks for inflation targeting and for monitoring price stability, and as deflators in the national accounts. The Price Statistics Division (PSD) of the National Statistical Office (NSO, Ministry of Statistics and Programme Implementation [MoSPI]), has been compiling and disseminating Consumer Price Index for Rural, Urban & Combined Sector since its inception in 2011.

The Price Statistics Division (PSD): of the National Statistical Office (NSO), Ministry of Statistics and Programme Implementation (MoSPI) started compiling Consumer Price Index (CPI) separately for rural, urban, and combined sectors on a monthly basis with Base Year (2010=100) for all India and States/UTs with effect from January 2011. It revised the Base Year of the CPI from 2010=100 to 2012=100, incorporating many methodological improvements in consonance with the international practices with effect from January 2015. Monthly price data are collected from 1114 markets in 310 selected towns and from 1181 selected villages by the Field Operations Division, NSO. The prices are being collected through Web Portals. The CPI for the Rural, Urban & Combined sector is released monthly with a time lag of 12 days (on the 12th working day of the following month or on the next working day of the following month, if the 12th is a holiday).

Index number of wholesale prices: in India is compiled by the Office of Economic Adviser, Ministry of Commerce & Industry. The present series has 2011–2012 as the base year and the data are released monthly. It is the most commonly used index as a measure of inflation in India. Item basket and the weighting diagram are based on Gross Value of Output as obtained from National Accounts Statistics, 2007. Seasonal items have also been included and when they disappear, their weight is distributed over remaining items in the sub-group on a pro rata basis. Unlike the 1993–94 series, in the new series, instead of Public Distribution System prices of paddy and wheat, their procurement prices have been included to correctly represent the first point of sale.

The existing series is based on ex-factory/ex-mine prices in respect of the manufactured items. In the case of Agricultural commodities, however, the prices as quoted in primary wholesale markets are used. The collection of price data is through correspondence & self-filing of information. Various units submit the prices electronically through online forms.

The index is compiled on the principle of weighted arithmetic mean according to the Laspeyre's formula, which has fixed base year weights operating through the entire life span of the series up to 2016, and from 2017, the index is compiled on the principle of weighted average method.

China

Consumer price indices: reflect the trend and degree of changes in prices of consumer goods and services purchased by urban and rural households during a given period. They are obtained by combining consumer price indices of urban household and consumer price indices of rural household. The indices enable the observation and analysis of the degree of impact of the changes in the prices of retail goods and services on the actual living expenses of urban and rural residents.

Producer price indices: for Industrial Products reflect the trend and degree of changes in general exfactory prices of all industrial goods during a given period, including sales of industrial goods by an industrial enterprise to all units outside the enterprise, as well as sales of consumer goods to residents. It can be used to analyze the impact of ex-factory prices on gross output value and value-added of the industrial sector.

South Africa

Break in series, all indices prior to 2008 not official indices. Linking factors used to calculate continuous time series. Linking factors: All items; Urban Area; Rural Area; Housing Indices; Food Indices; Electricity; Clothing Indices; Rent Indices.

Footnotes

Brazil

- (5) The data for Brazil refer to vehicles per 100 persons.
- (6) Estimated data.
- (12) Revised data, according to the last population estimate.
- (13) Employed population 15 years and older with work income.
- (14) In 2020, the indicators were calculated with information from the households visited for the first time in each of the four quarters of the year.
- (16) The expenditure on R&D activities on the surveyed units typically results from their own production, with estimative based on the sum of cost approach (intermediate consumption, employees' compensation, consumption of fixed capital). The total expenditure on R&D activities is complemented with those units that produce for the market. The units can be public or private for own production, while R&D market producers are all private.
- (17) Gross domestic expenditure on R&D as percentage of GDP. Data are from UIS database.
- (18) The following groups of Nature of Expenditure were considered: Active Personnel and Social Costs; Other Current Expenditures; Investments and Financial Inversions; 2 – This information does not include the following expenses: Retirement and reforms, pensions, scholarship resources and financing student, expenses with interest and debt burdens, educational burdens amortizations, current and capital transfers to the private sector.
- (19) Government expenditure on education as % of GDP. Data from UIS database.
- (24) The indicators were calculated with information of the second quarter of the year.
- (27) Domestic general government health expenditure as % of GDP. Data from WHO database.
- (31) Gini Index of Household Income.
- (32) Data from World Bank Poverty and Equity database.

Russia

- (7) Personal passenger cars.
- (20) Calculations on the base of the data of the Federal Treasury. Since 2005 including budgets of the state non-budget funds.
- (25) School Life Expectancy from primary to tertiary education. Data from UNESCO Institute for Statistics (UIS) database.
- (28) In 2000 – expenditures on health and physical culture.
- (33) Calculations of Gini Index are based on household budget sample surveys and macroeconomic average per capita monetary income data.
- (P) Preliminary data.

India

- (p) Preliminary data.
- (2) Figures are estimates indicating number of households having TV per 100 households as on 31 March of the year indicated in the table.
- (8) Figures have been derived by dividing the number of registered vehicles as on 31 March of the year indicated in the table (except for 2000 where the data are as on 31 March 2001).
- (21) Information pertains to financial year (i.e. April of year indicated in the table to March of the next year) and it relates to Expenditure of general government (i.e. Central Government & State Governments Combined).

(34) Gini coefficient of household consumption has been calculated on the basis of National Sample Survey Periods (i.e. July 1999 – June 2000, July 2004 – June 2005 & July 2009 – June 2010 to July 2011 – June 2012) and is based on Mixed Recall Period.

(37) Information pertaining to Full Time Equivalent collected for 2017–18 as on 1.4.2018.

(38) Revised Estimate.

(39) Budgetary Estimate.

China

(3) In the fourth quarter of 2012, the National Bureau of Statistics of the People's Republic of China conducted the integrated survey of urban and rural households, unifying the names, classification and statistical standards of urban and rural households. On its basis, we got the ownership data of residents in China, including the number of colour TV sets, cars and personal computers, etc.

(10) In rural household survey of China, cars refer to the automobiles for living use, including vans.

(15) Average annual wage of staff and workers refers to the average wage level in monetary terms per staff and worker during a year of time.

(22) Government appropriation for education to GDP.

(26) Average years of education attained for people aged 15 and older.

(29) Total expenditure on health as percentage of GDP.

(35) Data of Gini coefficient are based on per capita annual disposable income.

South Africa

(4) Information based on data from the General Household Survey (GHS) in which households were asked to indicate whether the household contained at least one television set. Not asked whether it was colour. Calculation: Total number of sets/total population x k.

(11) Data from the GHS in which households were asked to indicated whether the household contained at least one vehicle in working condition. Calculation: Total number of households with a working vehicle/total population x k.

(23) General government expenditure on education as a percentage of GDP.

(30) General government expenditure on health as a percentage of GDP.

(36) Gini is per capita expenditure excluding taxes.

Footnotes

- (1) Pertains to National Sample Survey Rounds (i.e. Period July of the previous year to June of the year mentioned in the table). The information on quintile groups and nutritional intakes pertains to uniform reference period whereas that for poverty lines pertains to mixed recall period as per Tendulkar Methodology.
- (2) Information pertains to financial year (i.e. April of year indicated in the table to March of the next year). Public expenditure on health & education relates to Expenditure of general government (i.e. Central government & State governments combined).
- (3) As at the end of December of the year indicated in the table. The data relate to number of doctors and include Government Allopathic Doctors and Dental Surgeons & Average Population Served in India (Provisional). Number of beds in Government Hospitals only.
- (4) Includes deaths due to Air crash, Ship Accidents, Collapse of Structure, Drowning, Electrocution, Accidental Explosion, Falls, Factory/Machine Accidents, Accidental Fire, Firearm, Mines or Quarry Disaster, Traffic Accidents, Stampede, Sudden Deaths, Deaths of Women during Pregnancy, Deaths due to Consumption of Illicit/Poisonous Liquor, Killed by Animals, Poisoning, Suffocation, Drug Overdose, Causes not known and causes other than forces of nature.
- (5) Information under the column for 2000 is based on Census 2001 and is as on 31 March 2001.
- (6) Pertains to Survey period July – December 2012.
- (7) Information on expenditure pertains to mixed reference period.
- (8) Illiteracy rate pertains to age 7 years and older for 2018, 2019, 2020, 2021 and 2022. Illiteracy rates are as per PLFS 2017-18, PLFS 2018–19, PLFS 2019–20, PLFS 2020–21 and PLFS 2021–22.
- (9) Pertains to Survey period July – December 2012. Figures under tap water for the year 2012 include piped water/public taps, but exclude bottled water.
- (10) Revised estimates.
- (11) Budgetary estimates.
- (12) The figures are as on 31 March.
- (13) Provisional.
- (14) Up to Dec 2022.
- (15) Until Oct 2021.

- (4) Individuals who were unable to read or who could not write a letter in at least one language. Figures were revised.
- (5) Figures were revised using the question which asks if the household toilet is connected to a public sewage system.
- (6) Fully or partially owned.
- (7) Refers to fully or partially owned dwelling units.
- (8) Piped or tap water in the house or yard, for total population, not only cities.

Explanatory Notes

General Notes

Population below international poverty line (1.25\$ a day PPP) as % of total population: percentage of the population living on less than 1.25\$ a day at 2005 international prices (according to Purchasing Power Parity exchange rates).

Percentage share of income or consumption by 20% subgroups of population: share that accrues to 20% subgroups (quintiles) of population.

Income quintile ratio: ratio of the average income (or consumption) of the highest (richest) 20% of population to the average income (or consumption) of the lowest (poorest) 20% of population.

Proportion of population 25 years and older with completed tertiary education: percentage share of the population aged 25 years and older with completed tertiary education (according to ISCED 5 or 6) to the total population.

Brazil

The Continuous National Household Sample Survey of IBGE.

The National Household Sample Survey – PNAD was an annual survey and was extinguished in 2015. The PNAD was replaced, with updated methodology, by the Continuous National Household Sample Survey – PNAD Continuous.

PNAD Continuous is a quarterly survey and started in the 2012. There are important methodological differences between PNAD and PNAD Continua. Therefore, the results of these two surveys are not comparable. Thus, the results of the PNAD were erased and replaced by those of PNAD Continuous.

More information about PNAD Continuous can be found at:
https://biblioteca.ibge.gov.br/visualizacao/livros/liv101561_notas_tecnicas.pdf

PNAD Continuous started with the labour force investigation, associated with basic demographic and educational information. Gradually other themes and topics supplementary were being aggregated.

According to the rotation scheme adopted by PNAD Continuous, a housing unit stays in the sample for five quarters, then it is withdrawn from the sample. Some themes and topics supplementary are surveyed in determined interview in all four quarters of the year and others are concentrated in determined quarter of the year.

Housing characteristics are investigated in housing units which are being interviewed for the first time in each of the four quarters of the year and information and communication technology characteristics are concentrated in the fourth quarter of the year. So, both themes started being surveyed in 2016.

Household's per capita disposable income (R\$): Household's gross disposable income divided by the estimated resident population on 1st July of the respective year.

Household's per capita savings balance (R\$): Household's gross savings divided by the estimated resident population on 1st July of the respective year.

Wage: it was considered the monthly wage usually received in the reference month (September of each year).

a) **Employees:** the wage was the gross monthly income that would normally be entitled to the whole working month and, when the income was variable, it was the average monthly income for the month of reference of the survey year. 13th salary (14th salary and 15th salary, etc.) and profit-sharing paid by the enterprise to their employees was not included. The amount received in benefits (housing, food, clothing, transport, meal or food stamps, etc.) was not included in the calculation of the income of the employees.

b) **Employers and own account:** The income was the withdrawal usually made monthly or, when the gains were variable, the average monthly withdrawal for the month of reference of the survey year. The withdrawal was the gain (gross income less expense incurred with the enterprise, such as paying employees, raw material, electricity, telephones, etc.). It was not included the value of the production of the enterprise used for own consumption.

Research and development expenditure (% of GDP): The expenditure on R&D activities on the surveyed units typically results from their own production, with estimative based on the sum of cost approach (intermediate consumption, employees' compensation, consumption of fixed capital). The total expenditure on R&D activities is complemented with those units that produce for the market. The units can be public or private for own production, while R&D market producers are all private.

Average years of schooling (Year): refers to the average of total years of academic education by adults aged 15 years and older (including general education and adult academic education, excluding various non-academic education).

Explanatory note: this indicator is one of the most important indicators to reflect the educational attainment or national quality in a country or a region.

Formula: Mean years of schooling (of adults) = (sum of years of academic educational years by adults aged 15 years and older/population aged 15 years and older) x 100, of which, the criteria of various educational levels converted into years of schooling is: never go to school = 0 year; primary school = 6 years; junior middle school = 9 years; senior middle school = 12 years; tertiary education = 16 years.

Russia

Growth rate (Index) of real wages: relative indicator which is calculated by dividing the indices of accrued wage by consumer price indices for respective period of time. Average nominal accrued wage are compiled by dividing accrued wages fund of employees by average annual payroll number of employees. The accrued wages fund of employees includes sums of payments added to employed in the monetary and not monetary forms for fulfilled and unfinished time, the compensatory payments connected with working conditions, surcharges and extra charges, bonuses, occasional incentive payments and also payments of meal and residing, having regular character. Benefits granted to the employees from the state social extra-budget funds are not included in the wages fund.

Population below international poverty line (\$1.90 a day PPP) as % of total population: percentage of the population living on less than \$1.90 a day at 2011 international prices (according to Purchasing Power Parity exchange rates).

The ratio of income quintile groups is the ratio of the average incomes (or consumer expenditures) of 20% of the population with the highest incomes and 20% of the population with the lowest incomes.

Gini index characterizes the level of deviation of the actual distribution of total income of the population from equal distribution. The value of the coefficient can vary from 0 to 1 (or from 0% to 100%), while the higher the value of the indicator, the more unevenly income is distributed in society.

Area of parks and green land: includes area of the common using green plantations (parks, gardens, squares and parkways), forest parks and city gardens, area of gardening of local roads.

Proportion of R & D expenditure to GDP (%): proportion of internal research and development expenditure to GDP.

School life expectancy: (according to the UNESCO methodology) – number of years a person of school entrance age can expect to spend within the specified level of education.

Number of physicians: include all doctors with the higher medical education engaged in the treatment and sanitary organizations, social security establishments, research institutes, polyclinics, pre-school establishments, schools, orphanages and others.

Hospital beds: are the beds equipped with the required appliances and ready to receive patients.

India

Gini coefficient: Gini Coefficient in case of India is calculated by NITI Aayog of India on the basis of Consumer Expenditure data (expenditure is used as proxy for income to measure inequality) compiled by National Sample Survey Office. The Gini Coefficient is produced both for uniform reference period and mixed reference period. The information included is based on mixed reference period, i.e. different recall periods for different items.

Tertiary education: According to Indian Standard Classification of Education (InSCED) 2014, Ministry of Human Resource Development, Department of Higher Education, Government of India, definition of Tertiary Education is as follows:

Tertiary education builds on senior secondary education, providing learning activities in specialised fields of education. It aims at learning at a high level of complexity and specialisation. Tertiary education includes what is commonly understood as academic education but also includes advanced vocational or professional education. In NSS surveys on Employment and Unemployment and on Education 'tertiary education' is not defined. However, for the purpose of this document, those with general educational level 'graduate and above' has been considered as having completed 'tertiary education'.

China

Government appropriation for education: refers to state budgetary fund for education, taxes and fees collected by governments at all levels that are used for education purpose, education fund for enterprise-run schools, income from school-run enterprises, work-study programme and social services that are used for education purpose.

Percentage of urban population with access to gas: refers to the ratio of the urban population with access to gas to the total urban population at the end of the reference period.

Public recreational green space per capita: refers to the ratio of the urban public recreational green space to the total urban population. Public recreational green space refers to the green areas open to the public for amusement and rest with the facilities of amusement, rest and services. Its function also includes improving ecology, beautifying landscape, education and preventing and reducing disaster.

Regular institutions of higher education: refer to educational establishments set up according to the government evaluation and approval procedures, recruiting graduates from senior secondary schools as the main target by National Matriculation TEST. They include full-time universities, colleges, institutions of higher professional education, institutions of higher vocational education, institutions of higher vocational education and others (non-university tertiary, branch schools and undergraduate classes), including total enrolment in full undergraduate courses and in specialized courses.

Regular secondary schools: are classified into regular senior secondary schools and junior secondary schools, including: Regular Senior Secondary School referring to education establishment providing senior secondary education service to graduates of junior secondary school; Regular Junior Secondary School referring to education establishment providing fundamental secondary education service to graduates of primary school;

Vocational secondary schools: include vocational junior secondary school and vocational senior secondary school, referring to education establishment ratified by education authority at county level or above to enrol graduates of primary school and junior secondary school and provide junior or senior vocational education service.

Regular primary schools: refer to education establishments ratified by education authority at county level or above to children of school age and provide primary education service.

Special schools: refer to regular or vocational primary or secondary education institutions enrolling children with physical or intellectual disabilities and other special children and teenagers that have demand for special education.

Pre-primary education institutions: include kindergarten and preschool class. Kindergarten enrolls three-year-old (and older) preschool children and provides care and education service. Establishment of kindergarten shall be approved by education authority at county level or above or town government, and shall be registered in file. In those regions without the resources of providing three-year preschool education to preschool children, one-year preschool class can be set up to provide one-year preschool education service to preschool children.

Physicians: refer to licensed (assistant) doctors. Licensed assistant doctors refer to the medical workers who have obtained the licenses of qualified (assistant) doctors and are employed in medical treatment, disease prevention or healthcare institutions, excluding the licensed (assistant) doctors engaged in management job. The classification of licensed (assistant) doctors is clinician, Chinese medicine, dentist and public health.

Number of licensed (assistant) doctors per 1000 population: The formula is: Number of Licensed (Assistant) Doctors per 1000 Population = (Number of Licensed Doctors + Number of Licensed Assistant Doctors) / Population *1000. The population is the figure of household registration from the Ministry of Public Security.

Number of beds of hospitals and health care per 1000 population = (Number of Beds of Hospitals + Number of Beds of Health Care) / Population *1000. The population is the figure of household registration from the Ministry of Public Security.

South Africa

Documents on higher education include: Higher diploma, Post higher diploma, Bachelors degree, Honours degree, Higher degree.

Footnotes

Brazil

- (9) Data in concentration (g/m³) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.
(12) Urban area. Data are from United Nations Global SDG Database.

Russia

- (1) Total Freshwater Use.
(3) Year-end data.
(7) By data of Rosgidromet. Data on emissions of carbon dioxide, with the account of land use, changing in land use and forestry, are taken from the Russian national inventory of anthropogenic emissions by sources and absorption by absorbents of greenhouse gases not regulated by Montreal Protocol for 1990–2021 years.
(13) Data are from United Nations Global SDG Database.

India

- (4) Data (except for 2013 and 2014) relate to agricultural year (i.e. July of the year indicated in the table to June next year) and is based on Land Use Statistics. Information for 2013 and 2014 are based on Estimation by Forest Survey of India. 2019 data are from India State of Forest Report.
(5) Perennial crops include most of the fruit crops and plantation crops such as cashew, areca nut, cocoa, coconut and some spice crops. Data relate to agriculture year (i.e. July of the year indicated in the table to June next Year) and pertains to perennial horticultural crops. Data for 2021 are based on 1st Advance Estimates.
(8) Per Capita Carbon Dioxide Emission pertains to emission by fuel combustion only. Emissions are calculated using the IEA's energy balance and the Revised 2006 IP-CC Guidelines. The figure including Land Use Change & Forestry was 0.7 MT in 2000 and 1.08 MT in 2007 as per 'India Second National Communication to the United Nations Framework Convention on Climate Change'. Ministry of Environment & Forests.

China

- (2) Total freshwater use.
(6) Data are from World Bank WDI Database, calculating by using "permanent cropland (% of land area)" multiply "land area of China".
(11) Data of sulphur dioxide emissions per capita refer to the ratio of the volume of sulphur dioxide emission to the average population of the year. Since 2016, sulphur dioxide emissions per capita have been adjusted according to the data of the second national census of pollution sources.
(15) Data are the figures of the Sixth National Forestry Survey (1999–2003), the Eighth National Forestry Survey (2009–2013), and the Ninth National Forestry Survey (2014–2018).

South Africa

- (16) Urban area. Data are from United Nations Global SDG Database.

Footnotes

- (1) The data are constant estimates based on studies conducted by Central Water Commission on Reassessment of water resources (MCM=Million m³).
- (2) Includes both terrestrial and marine protected areas.
- (3) Includes National Parks, Wild Life Sanctuaries, Conservation Reserves & Community Reserves.
- (4) As on 31st March/1st April. Protected area as percentage of total geographical area.
- (5) Data from 2009 onwards may not be strictly comparable with earlier years due to change in nomenclature, rationalisation and classification of reporting.
- (6) Provisional data. Reserves position is updated every 5 years.
- (7) Estimated Data.
- (8) Expenditure on environment is as per financial year (i.e. April of the year indicated in the table to March next year) and GDP estimate is based on current market price.
- (9) Expenditure on Environment data for 2013 pertains to expenditure as on 31st March 2014.
- (10) Expenditure on Environment data for 2015 pertains to expenditure as on 31st January 2016 as per sanctions.
- (11) Expenditure on Environment data for 2016 pertains to expenditure as on 31st December 2016.
- (12) Year 2014 stands for 2013/2014; Year 2015 stands for 2014/2015; Year 2016 stands for 2015/2016.
- (13) Revised Estimate.

Footnotes

- (1) Since 2018, the data refer to the number of national nature reserves.
- (2) Since 2018, the data refer to the area of national nature reserves.
- (3) The data for oil and natural gas reserves are remaining proved technically recoverable reserves as per *Classifications for Petroleum Resources and Reserves (GB/T 19492-2020)* since 2020. And before 2020, they are remaining technically recoverable reserves as per *Classifications for Petroleum Resources/Reserves (GB/T 19492-2004)*.
- (4) The data for non-petroleum mineral reserves are the total of proved reserves and probable reserves as per *Classifications for Mineral Resources and Mineral Reserves (GB/T 17766-2020)* since 2020. And they are remaining reserves and resources from 2017 to 2019.
- (5) Data after 2016 are incomparable to that in the previous years.

Explanatory Notes

General Notes

Proportion of population using safely managed drinking water services (%): proportion of population using an improved basic drinking water source which is located on premises, available when needed and free of faecal (and priority chemical) contamination. Improved drinking water sources include: piped water into dwelling, yard or plot; public taps or standpipes; boreholes or tube wells; protected dug wells; protected springs; packaged water; delivered water and rainwater (SDG indicators 6.1.1).

Proportion of important sites for terrestrial and freshwater biodiversity that are covered by protected areas (%): is the mean percentage of each important site for terrestrial and freshwater biodiversity (i.e. those that contribute significantly to the global persistence of biodiversity) that is covered by designated protected areas. It is computed by dividing the total protected area within the country by the total territorial area of the country and multiplying by 100 (SDG indicators 15.1.2).

Brazil

Fresh water resources: Historical Average 214 361 is the best information available until 2012.

Sulphur Dioxide Emissions per Capita: Data in concentration (g/m³) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.

Utilization of perennial crop area: Permanent crops is the land cultivated with long-term crops which do not have to be replanted for several years (such as cocoa and coffee); land under trees and shrubs producing flowers, such as roses and jasmine; and nurseries (except those for forest trees, which should be classified under "forest"). Permanent meadows and pastures are excluded from land under permanent crops.

Carbon dioxide emissions per capita: There has been a modification in the figures due to updating the estimates presented at the 3rd National Communication of Greenhouse Gases. Estimates updated in 2015 cover the GHG emissions in the 1970–2014 period for all sectors, except for change of land use, which covers the 1990–2014 period. The methodological basis for the estimates is the Brazilian Inventory of Anthropogenic Emissions and Removals of Greenhouse Gases, published by Brazilian Ministry of Science, Technology, Innovation and Communication. For agriculture, energy, industry processes and waste sectors the 3rd Inventory methodology has been used. As for land use changes the methodology used was that from the second inventory.

Russia

Perennial crop area: is the part of utilised agricultural area taken up by perennial crops (fruit and berry plantations, grapes, tea, hop, etc.).

Freshwater Resources: include internal renewable freshwater resources (river flows and groundwater from rainfall in the country).

Annual Flows: (annual freshwater using) are water withdrawals, not counting losses from storage basins.

Freshwater use: use of water resources taken from various sources (including seawater) to meet domestic needs. This does not include turnaround water consumption, as well as recycling of sewage and collector-drainage water.

Proportion of wastewater treated: is defined as the ratio of the volume of normatively pure water and water normatively purified at wastewater treatment plants to the total wastewater (sewage) discharge volume into surface water bodies (%).

India

Forest Cover: The Forest Cover of the country has been classified and mapped into three canopy density classes viz. Very Dense Forest (VDF), Moderately Dense Forest (MDF) and Open Forest (OF). In addition to three density classes, scrub areas, which are not part of Forest Cover, have also been classified and mapped.

Per capita carbon dioxide emission: This has been derived by dividing total carbon dioxide emission by mid-year population. Figures indicating net carbon dioxide emission (including removal) with land use change and forestry are occasionally communicated to United Nations Framework Convention on Climate Change by Ministry of Environment & Forests. However, the time series information provided in Table 7.1 relates only to emission by fuel combustion using sectoral approach, as provided by International Energy Agency.

China

Total water resources: refer to total volume of water resources measured as run-off for surface water from rainfall and recharge for groundwater in a given area, excluding transit water.

National reserves: refer to the area that protect typical natural ecosystems, natural concentrated distribution of rare and endangered wild animal and plant species, and natural relics of special significance. It has a large area to ensure the safety of the main protected objects, and to maintain and restore the quantity of rare and endangered wild animals and plants and their habitats.

Investment in the Treatment of Environment Pollution: refers to the fixed assets investment in the treatment of industrial pollution and in the construction of environment infrastructure facilities in cities and towns. It includes investment in treatment of industrial pollution, environment protection investment in environment protection acceptance project in this year, and investment in the construction of environment infrastructure facilities in cities and towns.

Permanent cropland: is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber.

Federal State Statistics Service of the Russian Federation.

Footnotes

(1) Since 2017, in accordance with the All-Russian Classifier of Products by Type of Economic Activity OK 034-2014 (OKPD2).

(2) Since 2010 – including associated gas.

(3) Since 2010 – concentrate of iron ore.

(4) Since 2017 production of steel includes ingots or other primary forms and semis of non-alloy steels, stainless steels and other alloy steels.

(5) Household refrigerators and freezers.

(6) Since 2017 – television receivers, whether or not combined with broadcast radio receivers or equipment for recording or reproducing sound or images. Data are not strictly comparable because of changes in the methodology.

(7) Household washing machines.

(8) In terms of 100% content of nutrients. Since 2010 – mineral and chemical fertilizers.

(9) Including sleepers. Since 2010 – wood, sawn or chipped lengthwise, sliced or peeled, of a thickness exceeding 6 mm; railway or tramway sleepers of wood, not impregnated.

(10) Since 2010 – portland cement, aluminous cement, slag cement and similar hydraulic cements.

(11) Including gauze, except narrow fabrics.

(12) Including rubber and felt.

Explanatory Notes

Brazil

The reported data on Output of Main Industrial Product reflect production by manufacturing units with more than 30 employees.

Production of Mobile Cellular Subscriptions reflects the national production of mobile cellular.

Russia

Index of industrial production: the aggregate index by kinds of economic activities "Mining and quarrying", "Manufacturing", "Electricity, gas and water production and supply" before 2014 year and since 2014 year by kinds of economic activities "Mining and quarrying", "Manufacturing", "Electricity, gas, steam and air conditioning supply", " Water supply, water removal, waste management, activity on liquidation of pollution".

Steel: after the All-Russian Product Classification OK 034-2014 (KPES 2008) – OKPD2 was introduced in January 1, 2017, the following types of products are being developed: unalloyed steel in ingots or in other primary forms and semi-finished products from unalloyed steel; stainless steel in ingots or other primary forms and semi-finished stainless steel; other alloy steel in ingots or in other primary forms and semi-finished products of other alloy steel.

India

Index of industrial production: is a simple weighted arithmetic mean of production relatives, the weights being proportional to gross value of output as available from Annual Survey of Industries (ASI) factory sector. At the industry indicator levels, the weights were allocated in proportion to their gross value of output.

The new series of all India index of industrial production (IIP) with base 2011–12 has a broader coverage of 856 items (clubbed in 407 item groups: Mining – 1, Manufacturing – 405, Electricity – 1) comprising 29 from Mining & Quarrying, 826 from Manufacturing and 1 from Electricity Sector having the weightage of 14.4%. 77.6% and 7.99% respectively in the all-India IIP. National Industrial Classification (NIC)-2008, which is as per ISIC Rev. 4. is being followed.

China

Industrial production index in China: refer to the indices of the PPI-deflated value added of industry (% to the previous year) covering industrial enterprises above the designated size. Industrial enterprises above the designated size refer to those with annual revenue from principal business over 20 million yuan from 2011 on and over 5 million yuan prior to 2011.

Sawnwood: refers to manufactured woods using wood sawing machine or manual tools to process log into formation of wood of certain width and thickness of sectional dimensions along longitudinal direction.

8.1 Indices of industrial production, 2022 (preceding year = 100)

- (7) Energy consumption per capita = total consumption / population.
- (11) Data from Sustainable Development Goals Indicators. UNSD Database.
- (15) Electricity consumption per capita does not include energy consumption in energy sector and losses.

India

Information pertains to Financial Year (i.e. April of the year indicated in the table to March next year). Conversion factors have been used for providing data in Oil Equivalents.

- (2) Primary energy comprises of coal, lignite, crude petroleum, natural gas and electricity. The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data have been updated.
- (3) Provisional data.
- (6) Includes energy from coal, lignite, crude petroleum (Crude oil in terms of refinery crude throughput). Natural gas & Electricity (Hydro, Nuclear & other renewable sources electricity from utilities). The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data have been updated.
- (8) The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data have been updated.
- (9) 1 petajoules = 23880000 kgoe. Mid-year population has been taken as on 1st October from population projection for India and states 2011–2036, report of the technical group on population projection.
- (16) (Gross generation + Net imports) / Midyear population (As on 31st March of the year). The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data have been updated.

China

- (4) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.
- (10) Energy consumption per capita is calculated by annual average population.
- (12) Share of non-fossil energy in total energy consumption, include transformation losses and other losses.

South Africa

- (13) Physical energy flowing out of South Africa as measured by the metering system at the South African borders.
- (14) Physical energy flowing into South Africa as measured by the metering system at the South African borders.

Table 9.2.1 - Summary of Energy - Brazil

	2000	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022

Footnotes

(1) Consumption of crude petroleum — refinery oil input.

(2) Consumption of petrol — only motor gasoline (alcohol and biodiesel not included).

(3) Electricity consumption — not include energy consumption in energy sector and losses.

(4) Energy production from thermal — includes oil products, natural gas, industrial gas, coal and biomass.

(5) Energy consumption — total primary energy supply or gross domestic supply.

b) Central Electricity Authority. Ministry of Power.

Footnotes

- (1) Crude oil in terms of refinery crude throughput.
(2) Kwh means Kilo Watt Hours.
(3) Provisional data.
(4) It includes Utilities and Non-Utilities.
(5) It consists of Renewable, Hydro, Nuclear and Thermal.
(6) Utilities: undertakings of which the essential purpose is the production, transmission and distribution of electric energy. These may be private companies, cooperative organisations, local or regional authorities, nationalised undertakings or governmental organisations.
(7) From 2010 onwards, Renewable Energy Sources have been shown separately.
(8) Non-Utilities: An independent power producer which is not a public utility, but which owns facilities to generate electric power for sale to utilities and end users. They may be privately held facilities, corporations, cooperatives such as rural solar or wind energy producers and non-energy industrial concerns capable of feeding excess energy into the system information pertains to financial year (i.e. April of the year indicated in the table to March of the next year).
(9) Information pertains to financial year (i.e. April of the year indicated in the table to March of the next year). Renewable Energy Sources (RES) include Wind, Small Hydro Project, Biomass Gasifier, Biomass power, Urban & Industrial Waste Power & Solar Power.

Note: Share of renewable energy consumption is provided on the following assumptions that:

- All the renewable energy produced is consumed at the source, i.e. zero transmission and distribution losses for renewable energy.
- Auxiliary Consumption of Renewable Energy projects is zero.

National Bureau of Statistics of China. China Energy Statistical Yearbooks 2000–2022; Statistical Communiqué of the People's Republic of China on the 2022 National Economic and Social Development.

Footnotes

- (1) Share of non-fossil energy in total energy consumption, include transformation losses and other losses.
(2) The GDP is calculated at current price.

Explanatory Notes

Brazil

Consumption of crude petroleum: refinery oil input.

Consumption of petrol: does not include alcohol and biodiesel. It includes only motor gasoline.

Energy production from thermal: includes oil products, natural gas, industrial gas, coal and biomass.

Primary energy production: includes natural gas rejected and non-utilized.

Exports: include bunkers.

Total consumption: includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

Solids: Mineral and Coal Derivatives (other than coke oven gas), Firewood and Charcoal, sugarcane bagasse, liquor, biomass (Other Renewable) and Other Primary remaining.

Liquids: Oil and derivatives, molasses, cane juice, ethanol, vegetable oils (Other Renewable) and NGL (Other Non-Renewable).

Gases: Natural gas, coke oven gas, biogas (Other Renewable) and industrial gas (Other Non-Renewable).

Electricity: Hydraulics and Electricity, Uranium (U308) and Derivatives, Wind and solar.

Share of renewable energy in energy consumption: is the renewable energy divided by the total primary energy supply= final energy consumption + losses in the energy processing and transferring + energy sector consumption + statistical differences

Russia

Electricity production: refers to gross production of electricity.

India

Total primary energy production: Primary energy does not include thermal electricity.

Electricity consumption per capita = (Gross generation + Net imports) / Midyear population

China

Total primary energy production refers to the total production of primary energy by all energy producing enterprises in the country in a given period of time. It is a comprehensive indicator to show the level, scale, composition and pace of development of energy production of the country. The production of primary energy includes that of coal, crude oil, natural gas, hydro-power and electricity generated by nuclear energy and other means such as wind power and geothermal power. However, it does not include the production of fuels of low calorific value, bio-energy, solar energy and secondary energy converted from primary energy.

Total consumption of energy refers to the total consumption of energy of various kinds by the production sectors and the households in the country in a given period of time. It is a comprehensive indicator to show the scale, composition and pace of increase of energy consumption. Total energy consumption includes that of coal, crude oil and their products, natural gas and electricity. However, it does not include the consumption of fuel of low calorific value, bio-energy and solar energy. Total energy consumption can be divided into three parts: end-use energy consumption; loss during the process of energy conversion; and energy loss.

South Africa

General: The figures populated in this table have been derived from the South African Energy Balance for the respective years. The definitions/descriptions of all energy commodities and activities in our energy balances are aligned to international recommendations espoused in the International Recommendations on Energy Statistics (IRES) document and the IEA's Energy Statistics Manual.

Technical clarifications

Electricity, gas and steam production: We assumed that this includes **production of liquid fuels**.

Nuclear: The figures were derived using electricity produced with the assumption of 33% efficiency.

Private consumption: was assumed to be residential + non-specified other under **Other Sectors** and any unspecified consumption.

Manufacturing: calculated as the sum of all industries less commercial and construction.

- (19) Preliminary data, may be reviewed.

Russia

- (2) The data are produced and disseminated by the Federal Service of State Registration, Cadastre and Cartography. At the end of the year.
- (10) Production of livestock and poultry for slaughter.
- (17) Since 2010 – wood in the rough.

India

- (3) The period of agricultural year is from July (of the year indicated in the table) to June (next year).
- (6) As per Third Advance Estimates 2022–23.
- (11) The data pertain to March (of the year indicated in the table) to February (next year).
- (12) Meat production from commercial poultry farm is included from 2007–2008.

China

- (4) Data of area of cultivated land of China before 2016 are from the annual survey of the change of land. Data in 2019 are from the third national land survey.

South Africa

(8) Major cereals (maize/corn, wheat, malting barley, sorghum).

(13) Major meat (beef and veal, mutton, goats, poultry).

(16) Cubic meters derived from figures in tons provided by DAFF in the Report on Commercial timber resources and primary roundwood processing in South Africa.

Figures obtained from the Report on Commercial timber resources and primary roundwood processing.

Table 10.2.1 - Selected Data on Agriculture, Forestry, Animal Husbandry and Fishery - Brazil

Footnotes

- (1) Preliminary data, may be reviewed.
- (2) Structure of farm products area by main species based on Harvested areas of farm crops (Agricultural Municipal Production Survey).
- (3) Fruits production considers the following fruits: orange, banana, grape, pineapple, papaya, watermelon, apple, coconuts, passion fruit, mango, tangerine, lemon, melon, guava, peach, persimmon, avocado, cashew nuts, fig, pear, nut, quince. From 2015 included the production of "açai". Pineapple and coconut data are published in 1000 fruits units. Conversion: 1 pineapple = 1.5 kg and 1 coconut = 1.5 kg.
- (4) Production of meat measured in carcass/dressed weight (Quarterly Animal Slaughter Survey).
- (5) 1 kg corresponds to 1.03 litre.

- (2) Fibre flax, hemp, cotton.
- (3) Since 2011, data are published in weight after processing.
- (4) Fruits (excluding nuts), berries and grapes.
- (5) Before 2012 yield is given per 1 hectare of plants in fruit-bearing age; for 2012–2019 – per 1 ha harvested area.
- (6) Livestock and poultry for slaughter.
- (7) Catch of fish and other aquatic bio-resources. Data by Federal Agency for Fishery.
- (8) Availability of tractors in agricultural organizations (excluding tractors with mounted digging, ameliorative and other machines), since 2008 excluding micro enterprises.
- (9) Availability of harvesters and beet harvesting machines (excluding plant top gathering machines), since 2008 excluding micro enterprises.
- (10) Mineral fertilizers used per 1 ha of crops in agricultural organisations, since 2008 – excluding data on micro enterprises.
- (11) Since 2010 – wood in the rough.
- (12) Fruits (excluding nuts), berries, grapes, vegetables and melons.

Footnotes

- (1) Index numbers, production and yield for the year 2022 are as per third advance estimates 2022–23.
- (2) The period of agriculture year is from July (of the year indicated in the table) to the June (next year).
- (3) Data on Livestock product pertain to March (of the year indicated in the table) to February (next year).
- (4) Meat production from commercial poultry farm is included from 2007–2008 onwards.
- (5) Milk includes cow, buffalo, and goat milk.
- (6) Poultry eggs include eggs from fowls and ducks.
- (7) Data on number of livestock are produced from livestock census which is conducted at a gap of five years. Information from last Census (2019) has been included.
- (8) For 2020: As per 2020–21(Final); For 2021: As per 2021–22(Final); for 2022: As per 2022–23 (First Advance Estimates).
- (9) The data pertain to March (of the year indicated in the table) to February (next year).

Footnotes

(1) Data of indices of agricultural gross output prior to 2003 are calculated at 1990 prices. The new classification for national standard of industry classification has been implemented since 2003 and the gross output value includes the services in support of agriculture, forestry, animal husbandry and fishery.

(2) **Preliminary data.** Preceding year = 100.

(3) Ownership of tractors and harvester-threshers in agriculture at year-end includes large, medium and small-sized tractors, harvesters and threshers. Data from 2014 do not include threshers.

a) Department of Agriculture, Forestry and Fisheries.

Footnotes

(1) Data on commercial agriculture.

(2) Crop products (%) = Volume Index.

Explanatory Notes

General Notes

Cultivated area: This consists of net area sown and current fallows.

Average yield of crops: Average yields per hectare of principal crops have been obtained by dividing the total production by the corresponding total area under each crop.

Brazil

Fruits production: considers the following fruits: orange, banana, grape, pineapple, papaya, watermelon, apple, coconuts, passion fruit, mango, tangerine, lemon, melon, guava, peach, persimmon, avocado, cashew nuts, fig, pear, nut, quince.

Cultivated area: includes only harvested area.

Milk data: obtained in litres were converted to kg (1kg = 1.03 litre).

Major part of 2016 final data will be available only on September 2017.

Catch of fish data: not available after 2011.

Timber production: refers to the volume of timber measured and accepted based on the national timber standards after the procedures of logging, bucking, yarding, and finally transporting to timber depots or defined distribution sites.

Amount of pesticide use: Pesticide data available from IBAMA administrative data. Kg of pesticide expressed in *active ingredient, not final formulation*. Source: <http://www.ibama.gov.br/relatorios/quimicos-e-biologicos/relatorios-de-comercializacao-de-agrotoxicos>, yearly bulletins, file 'sale by class of use' (vendas por classe de uso).

Note: Data for 2020 data will be available on October 2021.

Russia

Agricultural production: is the sum of crop-growing and animal husbandry outputs of all agricultural producers including enterprises of private sector (household enterprises, peasant (farm) enterprises and individual employers) in value terms at actual current prices. To calculate agricultural production index, the indicator of production volume at comparable prices of previous year is used.

India

Ministry of Agriculture is the nodal agency for collection, compilation & dissemination of agriculture statistics in India.

Directorate of Economics & Statistics in Department of Agriculture & Cooperation, Ministry of Agriculture is the agency primarily involved with Crop statistics and the reporting period for the same is agricultural year, i.e. July to June of the next year whereas Department of Animal Husbandry, Dairying & Fisheries, Ministry of Fisheries, Animal Husbandry and Dairying produces & disseminates information on livestock with financial year as the reporting period (i.e. March–February of the next year).

Cultivated area: consists of Net Area sown and current fallows.

China

Indices of agricultural gross output: The development rates of agricultural gross output value deflated by using producer's prices indices.

Timber production: refers to the volume of timber measured and accepted based on the national timber standards after the procedures of logging, bucking, yarding, and finally transporting to timber depots or defined distribution sites.

Amount of pesticide use per unit of cultivated land: refers to the ratio of total volume of pesticides used to the cultivated area in the same period, usually kg/ha. or kg/mu used as measurement unit.

Footnotes

Information on Railways, Civil aviation & Production of vehicles pertains to financial year, i.e. April (year indicated in the table) to March (of the next year) whereas that for registered vehicles/ownership is as on 31st March, and that on accidents, injuries and deaths pertains to calendar year.

- It includes passenger vehicles (PVs), commercial vehicles (CVs), three wheelers, two wheelers.
- Includes Cars, Jeeps, Taxis, Buses and Omnibuses. Data are as on 31st March of the year indicated in the table.
- Figures indicate number of cars registered in India as on 31st March of the year indicated in the table except for 2000 where the data are as on 31st March 2001.
- Figures for Road Transport from 2012–13 to 2019–20 is are estimated by Transport Research Wing (MoRT) on the basis of actual GDP growth rate and elasticity of Passenger movement.
- Figures for Road Transport from 2012–13 to 2019–20 is are estimated by Transport Research Wing (MoRT) on the basis of actual GDP growth rate and elasticity of freight traffic.
- Provisional.

Explanatory Notes

Brazil

Length of highways: Refers to federal, state and municipal highways, excluding planned highways.

Information on federal highways was published in December 2016 at www.dnit.gov.br.

Russia

Passenger traffic (all means): passenger turnover which is determined multiplying the number of passengers for each position of transportation by the length of distance covered in km. Total passenger turnover is the sum of passenger turnover of the railway, bus, passenger taxi, tramway, trolley-bus, subway, maritime, inland water and air transport.

Freight traffic (all means): freight turnover which is calculated multiplying the weight of shipped freight in tons by the length of its shipping in kilometers. Total freight traffic is the sum of freight turnover of the railway, motor, pipeline, maritime, inland water and air transport.

Public Roads: refer to the federal roads of federal property; regional and inter municipal roads of the property of constituent entities of the Russian Federation; local roads of the property municipalities as well as of property of settlements, municipal and city districts.

India

Length of Railways in Operation: This indicates total route kilometres, both electrified and non-electrified.

Length of highways: excludes urban and project roads.

Length of Petroleum Pipelines: includes both onshore & offshore infrastructure.

Civil Aviation: information on air traffic and air operations includes operations of Indian Carriers on scheduled both domestic and international services.

China

Length of Railways in Operation: refers to the total length of the trunk line for passenger and freight transportation (including both full operation and temporary operation).

Length of Highways: refers to the length of highways which are built in conformity with the grades specified by the highway engineering standard [Highways WTBZ-Technical Standard JTJ01-88] formulated by the Ministry of Transport, and have been formally checked and accepted by the departments of highways and put into use.

Length of Petroleum Pipelines: refers to the actual transport distance of oil (or gas) products, which is in general calculated according to the length of single pipeline.

Freight Traffic (passenger traffic): refers to the sum of the product of the volume of transported cargo (passengers) multiplied by the transport distance in a given period of time.

Freight Traffic of Petroleum Pipelines: refers to the total amount of oil (or gas) transported through petroleum pipelines.

Length of Domestic Regular Civil Aviation Routes: refers to the total length of all domestic periodic civil aviation routes during statistical period.

Number of Regular Civil Airports Opened: refers to the total number of areas assigned for civil aviation flights to do take off, landing, taxiing, parking and other actions.

Ownership of Automobiles: refers to the total number of vehicles that are registered and received vehicles license tags according to the Work Standard for Motor Vehicles Registration formulated by the Transport Management Office under the Department of Public Security at the end of the reference period.

Footnotes

Brazil

- (1) Data from ITU database.
- (6) Considering population from 10 years old and older.
- (9) Until 2012, comprised only persons who accessed the Internet by personal computer and from 2013 onwards, by any equipment.

Russia

- (5) Number of user's devices of mobile radiotelephone (cellular) communication.
- (10) Until 2013 – according to the World Bank. Since 2013, based on the sample surveys of the population on the use of ICT.
- (13) Newspapers issued 3 and more times per week (number of titles).

India

- (2) Data are as on 31st December of the year indicated in the table except for 2000 where it is as on 31st March of the year 2001. Data for main telephone lines pertain to wireline whereas that for cellular mobile telephone pertains to wireless subscription in case of India.
- (11) Information for 2000–2012 is as per ITU database whereas data for 2013 onwards are as per Telecom Regulatory Authority of India, Indian Telecom Services Performance Indicator Report (Various Issues) and is on as 31st December of the year indicated in the table.
- (14) Data relate to 31st March of the year indicated in the table except for 2000 where the same is as on 31st December 2000. Data pertain to registered dailies.
- (17) Data for 2021 are up to September 2021.

China

(3) PHS subscribers are also included in those of the main telephone lines.

(7) National Bureau of Statistics of China started a household survey in 2013–2014, including both urban and rural households. The coverage, methodology and definitions used in the survey are different from those used for the separate urban and rural household surveys prior to 2013.

(15) Kinds of newspapers.

South Africa

(1) Data from ITU database.

Household based question:

(4) Does the household have access to a telephone line in the dwelling or household? Calculation: Households with a telephone/total population x 1000. Survey data.

(8) Does the household have access to a computer in the dwelling or household? Question was only asked in 2005, 2012–2019.

(12) Does the household have access to an internet connection in the dwelling or household? Available from 2009.

(16) Number of current daily newspapers, including those not printing on weekends and public holidays.

Explanatory Notes

Brazil

Reference period: in the Brazilian surveys when asking about individual use of ICT refers about last three months according the international recommendation.

Number of Internet Users per 1000 Inhabitants: It was considered the inhabitants 10 years old or older. Internet users — persons 10 years old or older who accessed the Internet somewhere (own home. workplace. center of free or paid access. home of other persons or any other place) by PC desktop or laptop (notebook. palmtop. pocket pc or handheld) at least once in the reference period of the last three months.

Russia

Main Telephone Lines: are telephone sets having independent numbers at the public telephone station as well as telephones with a shared line intended for public use. They switched on the public network and render service of local, inter-cities and international communication. Number of telephone lines (including payphones) of the public telephone network per 100 people is calculated as the ratio of the number of telephone sets of the public telephone network, including payphones of all types, to the total resident population as of January 1 of the corresponding year.

Cellular communication: mobile radio and telephone communication. Mobile communication – complex of technical means (radio and communication equipment, communication lines and structures), which render communication facilities for mobile subscribers and subscribers of public telephone network.

Number of Internet users per 100/1000 inhabitants is calculated as the ratio of the population that used the Internet over the past 3 months to the total population (2013–2017 – for the population aged 15–72 years, from 2017 for the population aged 15–74 years).

Data on organizations using personal computers and other information and communication technologies are given for organization which are under statistical observation (excluding small business).

India

Main telephone line: information relates to wireline connections, i.e. connections with (fixed) telephone line connecting the subscriber's terminal equipment to the network. It includes WLL (fixed line extending up to the base unit).

Subscribers of cellular mobile telephone: includes wireless connections.

Data on Internet user: include information on subscription through both fixed lines as well as wireless (mobile phones) internet subscriptions.

Number of daily newspaper: includes newspapers in all languages & bilingual/multilingual newspapers.

Total Internet subscribers: comprises narrowband subscribers and broadband subscribers. This also comprises wired Internet subscribers & wireless Internet subscribers.

China

Main Telephone Line: refers to a main line which is a (fixed) telephone line connecting the subscriber's terminal equipment to the public switched network and which has a dedicated port in the telephone exchange equipment. The number of ISDN channels are included. PHS subscribers are included.

Subscribers of Cellular Mobile Telephone: refer to number of portable telephone users subscribing to a public mobile telephone service and have access to Public Switched Telephone Network (PSTN) using cellular technology. This includes analogue and digital cellular systems.

Internet Users: refer to the inhabitants aged 6 or older and have connected with Internet at least once in the last 6 months.

Number of Daily Newspapers: includes all kinds of newspapers, with CSSN (China Standard Serial Number).

Fixed Broadband Internet Access: refers to those users registered accessing to the public internet through xDSL, FTTx+LAN, FTTH/O and other broadband access methods at the end of the reference period. By the administrative area, the internet broadband access users can be divided into urban and rural broadband access users. Breaking down by customers, they can be divided into household broadband access users and office broadband access users.

Time Length Accessed to Fixed Broadband Internet: refers to the actual time use by the fixed broadband Internet access users in the enterprise connected to the public Internet through the fixed broadband network at the end of the reference period.

Flow Volume Accessed to Mobile Internet: refers to the flow volume occurred by the mobile phone users (including wireless LAN users) in the enterprise accessing to the public internet or WAP site through the mobile communication network. including uplink and downlink flow.

Length of Optical Cable Lines: refers to the sum of the length of the trunk line of the local network, the length of the cable line of the access network, and the length of the long distance optical cable line at the end of the reference period.

Length of Long Distance Optical Cable Lines: refers to the actual length of the long distance optical cable used to realize the transmission of optical signals. Overhead cable length is calculated by the actual length of rod road; cable length buried in the underground, underwater, submarine pipelines is based on the channel or pipe length.

Base Stations of Mobile Telephones: refer to all the sets of facilities that provides service for wireless receiving and transmitting apparatus for residence, processing the mobile wireless communication between base station and the mobile station, playing relay function between the mobile switching and the mobile stations, monitoring the quality of wireless transmission at the end of the reference period.

Broadband Internet Access Ports: refer to all kinds of broadband internet access ports actually installed and operated for the access of the internet users, and do not include narrowband dial-up access ports. According to the main technical modes at present used for the broadband internet access, the xDSL port, LAN port and FTTH/O port are used.

Number of Websites: refers to the websites with the domain name or "WWW.+ domain name" as their site addresses, of which, including China's country websites of the top-level domain name (CN) and category top level domain name (gTLD). These domains are registered within the territory of China.

South Africa

Household-based question.

Does the household have access to a telephone line in the dwelling or household?

Does the household have access to a cellphone in the dwelling or household?

Does the household have access to a computer in the dwelling or household? Question was only asked in 2005, 2012 and 2013.

Does the household have access to an internet connection in the dwelling or household? Question was asked in 2005, and then again in 2009, 2010. Available 2009–2013.

Not access to outside sources, just whether they have access in the household.

Footnotes

Brazil

- (1) The general government includes federal government, state governments, and local governments, and excludes Central Bank of Brazil and public enterprises.
- (2) Nominal result.
- (7) Share of taxes on income, profits and capital gains to Total General Government Revenue. Data compiled according to the Government Finance Statistics Manual 2014. Data Subject to change.
- (10) The Annual average exchange rates used is available in Tables 13.2.1 and 14.1.

Russia

- (3) Share of deficit/surplus of Federal budget to GDP. The calculation carried out on the basis of data of the Federal Treasury.
- (8) Share of profit (income) tax of organisations and income tax of individuals to revenue.
- (11) The calculation is according to the data of Bank of Russia.

India

- (4) For all information, reference year is financial year (i.e. April of the year indicated in the table to March of the next year). For example, figure given for year 2000 here is virtually for financial year 2000–01, which means April 2000 to March 2001. This is applicable for each other figure in the row.
- (5) The data relate to Revenue Deficit of General Government, i.e. Central Government & State Governments combined. For 2011 to 2015, figures given are based on GDP figures relating to new series (i.e. Revised Base year 2011–12=100) and worked out at current market price.
- (9) Revenue pertains to General Government & includes both revenue & capital receipts. Income Tax includes Personal Income Tax & Corporation Tax only. Income Tax is collected by Central Government only.
- (12) Includes Currency with public, deposit money of the public and post office saving bank deposit. M2 supply (year End) in million US \$ has been calculated on the basis of year end exchange rate of the concerned financial years.
- (15) Revised Estimate.

China

- (13) M2 is calculated using the year-end exchange rates released by State Administration of Foreign Exchange.

South Africa

- (6) Fiscal year: year begins on 1 April to 31 March of the following year.
- (14) Calendar year: year begins on 1 January to 31 December (year-end). Year-end exchange rates are used.

M2 comprises:

- * Notes and coins in circulation outside monetary sector.
- * Cheque and transmission deposits.
- * Other demand, short- & medium-term deposits up to 6 months.
- * Monthly average exchange rates at year end.

Footnotes

(1) The data consists of Central Government finance statistics and is compiled according to the methodology established by the Government Finance Statistics Manual (GFSM 2014), developed by the International Monetary Fund (IMF). The presented data follows the COFOG – Classification of Functions of Government. The COFOG was developed by the Organisation for Economic Cooperation and Development and published by the United Nations Statistical Division as a standard methodology of classification of the purposes of government activities.

(2) Data from IMF database.

Footnotes

(1) In 2000 – data are provided excluding the budgets of state extra-budgetary funds.

(2) In 2000 – personal income tax.

(3) In accordance with the budget classification of expenditures in force in 2000, national expenditures include expenditures on public administration and local self-government, the activities of financial and tax authorities. From 2005 to 2010, expenditures on national issues included expenditures on servicing state and municipal debt. Since 2011 (as well as in 2000) the cost of servicing state and municipal debt is an independent position. Since 2005 expenditures on national issues include expenses on the judicial system, international relations and international cooperation, fundamental research, etc. (in addition to expenses on state and municipal administration).

(4) In 2000 – expenditures on health care and physical education.

(5) In 2000 – expenditure on agriculture and fisheries, forestry and water resources.

(6) By data of Bank of Russia.

(7) The calculation is according to the data of Bank of Russia.

(8) According to IMF data.

Footnotes

For all information, reference year is financial year (i.e. April of the year indicated in the table to March of the next year). With regard to Foreign Exchange Reserves, they are given as at the end of the financial year, i.e. 31st March (of the next year). Foreign Exchange Reserves data for 2017 pertain to week ending 30th March 2018 (latest available data). Month-end data of March will be available with a lag of one month.

For all information, reference year is financial year (i.e. April of the year indicated in the table to March of the next year). With regard to Structure of Interest Rates, they are given as at the end of the financial year, i.e. March (of the next year). E.g. data on deposit and lending rates for 2022 pertain to the last week of March 2023.

- (1) Data pertain to Central Government only.
- (2) This data is not comparable with previous year's data as past data consist of consolidated Receipts and Expenditures of Central and State Governments. Revenue receipts consist of tax receipt and non-tax receipts.
- (3) The information relates to expenditure (both Plan and Non Plan) by Ministries/Departments of Centre and Union Territories including Plan expenditure of States.
- (4) Data source for the structure of interest rates is the Reserve Bank of India. Data on deposit and lending rates pertain to five major Public Sector Banks up to 2003–04 and to five major banks for the subsequent years.
- (5) Savings deposit rates from 2011–12 onwards relates to balance up to INR 1 Lakh.
- (6) Data on lending rates relate to either Prime Lending Rate (PLR) for the period up to 2002, Benchmark Prime Lending Rate (BPLR) for the period 2003 to 2009, Base Rate for the period 2010 to 2015 and Marginal Cost of Funds Based Lending Rate (MCLR) (overnight) since 2016. BPLR system introduced effective November 2003 was replaced by the Base Rate System effective from July 1, 2010, which was in turn replaced by the MCLR System effective April 1, 2016.

Note: M1, M2, M3 and M4 as on 31st March for all years. Figures in foreign reserve as on 31st March for all years.

- b) The People's Bank of China.

Footnotes

- (1) Since 2009, there have been some changes on the classification of expenditure, so the data cannot be compared with the previous years.
- (2) Currency issued on million US\$ is calculated using the year-end exchange rates released by State Administration of Foreign Exchange.
- (3) Deposit rates and lending rates refer to the one-year official interest rates of deposits and loans of financial institutions.

Source

South African Reserve Bank.

Footnotes

Fiscal years – year beginning April 1 to March 31 of the following year.

- (1) No definition available for some of the tax categories. Total net tax revenue minus the detail of all available categories. This also includes the adjustments made for South African Customs Union transfers and VAT refunds.
- (2) Data for excise duties on cigarette and cigarette tobacco only from 2001.
- (3) Consolidated General government refers to Central, provincial and local government.
- (4) M3 is the broadly defined money supply aggregate officially used in South Africa.
- (5) The prime overdraft rate serves as a market reference or benchmark rate for interest rates, but does not determine interest rates. Note: This table can be listed respectively for BRICS countries in country tables if available.

Explanatory Notes

Brazil

Share of Deficit (-)/Surplus of General Government to GDP: The general government includes federal government, state governments, and local governments, and excludes Central Bank of Brazil (Bacen), and public enterprises. Nominal result.

Share of Income Tax to Revenue: Total tax revenue corresponds to the fiscal load.

M2 Supply (End of the Year): The Annual average exchange rates used is available in Tables 13.2.1 and 14.1.

Expenditure: Data cover Federal Government only.

Other expenditure: is the single largest item because it comprises transactions such as transfers to states and municipalities and debt management expenditure.

Russia

Budget Revenues: monetary funds coming to the budget, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources of financing the budget deficit.

Budget Expenditures: monetary funds paid from the budget funds, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources financing the budget deficit.

Deposit Rate: average rate on deposits (in national currency) of individuals in credit institutions for up to 1 year.

Lending Rate: average rate on loans (in national currency) to legal entities (companies and organizations) in credit institutions up to 1 year.

Annual rates: are calculated as the average of monthly data.

India

General Government includes both Central Government and State Governments.

Income Tax: Income Tax Act, 1961 imposes tax on the income of the individuals or Hindu undivided families or firms or cooperative societies (other than companies) and trust (identified as bodies of individuals associated of persons) or every artificial juridical person. The inclusion of a particular income in the total incomes of a person for income-tax in India is based on his/her residential status. There are three residential statuses. viz. (i) Resident & Ordinarily Resident (Resident) (ii) Resident but not Ordinary Resident and (iii) Non Resident. There are several steps involved in determining the residential status of a person. All residents are taxable for all their income, including income outside India.

$M1 = \text{Currency with the Public} + \text{Deposit money of the Public}$
 $M2 = M1 + \text{Post Office savings banks deposits.}$

$M3 = M1 + \text{Time deposits with banks.}$

$M4 = M3 + \text{Total Post Office Deposits.}$

China

Revenue of Consolidated Budget: refers to income for the government finance through participating in the distribution of social products. It is the financial guarantee to ensure government functioning. The contents of government revenue have been changed several times.

Expenditure of Consolidated Budget: refers to the distribution and use of the funds which the government finance has raised, so as to meet the needs of economic construction and various causes.

Share of Deficit/Surplus of General Government to GDP: = (Revenue of consolidated budget - Expenditure of consolidated budget)/GDP.

The Contents of Government Revenue include the following main items:

a) **Various Tax Revenues:** including domestic value added tax (VAT), domestic consumption tax, VAT and consumption tax from imports, VAT and consumption tax rebate for exports, corporate income tax, individual income tax, resource tax, city maintenance and construct tax, house property tax, stamp tax, urban land use tax, land appreciation tax, tax on vehicles and boat operation, ship tonnage tax, vehicle purchase tax, tariffs, farm land occupation tax, deed tax, and tobacco leaf tax, environment protection tax, etc.

b) **Non-Tax Revenue:** including special program receipts, charge of administrative and institutional units, penalty receipts and others non-tax receipts.

The Contents of Government Expenditure: include the following main items: a) Expenditure for general public services; b) Expenditure for foreign affairs; c) Expenditure for national defence; d) Expenditure for public security; e) Expenditure for education; f) Expenditure for science and technology; g) Expenditure for culture, sports and media; h) Expenditure for social safety net and employment effort; i) Expenditure for medical and health care; j) Expenditure for environment protection; k) Expenditure for urban and rural community affairs; l) Expenditure for agriculture, forestry and water conservancy; m) Expenditure for transportation; n) Expenditure for commerce and services, etc.

South Africa

M0 = Deposits of monetary institutions with the central bank and banknotes and coin in circulation outside the central bank.

M1 = Notes and coin in circulation plus cheque and transmission deposits and other demand deposits of domestic private sector with monetary institutions.

M2 = M1 plus other short-term deposits held by the domestic private sector.

M3 = M2 plus long-term deposits held by the domestic private sector.

Footnotes

Brazil

- (1) According to IMF data.
- (11) Cash concept.
- (16) Since April 2015, Brazilian Direct Investment (DI) data are presented in accordance with the sixth edition of Balance of Payments and International Investment Position Manual (BPM6), edited by IMF, which uses the principle of assets and liabilities instead of the directional principle. Additionally, new sources of information enabled the inclusion of flows of reinvested earnings from 2010 onwards. As of BPM6, the expression "FDI" was replaced by "Direct Investment - Liabilities".

Russia

- (5) According to the Bank of Russia.
- (12) At the end of the year. The calculation is according to the data of Bank of Russia.
- (17) At the beginning of the year.
- (18) Data are presented in accordance with the 6th version of the IMF's Balance of Payments and International Investment Position Manual.

India

- (2) All information in case of India pertains to financial year (i.e. from April 1 of the year mentioned in the table to March end of next year).
- (4) GDP estimates used are at Current Market Prices (with Base Year revised 2011–12=100).
- (6) Provisional Data.
- (13) Figures are as on 31st March of the year indicated in the table.
- (19) Figure is up to February 2023.
- (20) Inflows of FDI (million US\$) is Gross FDI Inflow to India and Outflows of FDI (million US\$) is Net FDI abroad.

China

- (3) Data of imports and exports of goods and commercial services come from the State Administration of Foreign Exchange.
- (7) Data of FDI come from the Ministry of Commerce of the People's Republic of China.
- (9) Outflows of FDI from 2000 did not include financial intermediation, data for 2012 onwards included all sectors.
- (15) In accordance with the Special Data Dissemination Standard (SDDS) of the IMF, China adjusted the statistical coverage of external debt and disseminated the full-scale data on China's external debt in 2015, including RMB-denominated external debt, which was classified into medium-and long-term external debt and

short-term external debt by contractual maturity. Outstanding external debt at the end of 2014 was adjusted to the full-scale data on the base of comparable coverage. No adjustments were made for previous years.

South Africa

(8) These indicate on a net basis an increase in liabilities and a decrease in assets.

(10) These indicate on a net basis a decrease in liabilities and an increase in assets.

(14) This includes gold.

South African Reserve Bank.

Footnotes

(1) Public customs figures adjusted for balance-of-payment purposes.

(2) Investments by foreigners in undertakings in South Africa in which they have individual or collectively in the case of affiliated organisations or persons, at least 10% of the voting rights.

(3) Investments by South African residents in undertakings abroad in which they have at least 10% of the voting rights.

(4) Transactions on the current, capital transfer and financial accounts.

(5) Commodity gold. Prior to 1981 net gold exports comprised net foreign sales of gold plus changes in gold holdings of the South African Reserve Bank and other banking institutions.

(6) Liabilities related to foreign reserves include all foreign liabilities of the South African Reserve Bank and short-term foreign loans to the central government by international organisations.

Explanatory Notes

Brazil

Since April 2015, Brazilian Direct Investment (DI) data are presented in accordance with the sixth edition of Balance of Payments and International Investment Position Manual (BPM6), edited by IMF, which uses the principle of assets and liabilities instead of the directional principle. Additionally, new sources of information enabled the inclusion of flows of reinvested earnings from 2010 onwards. As of BPM6, the expression "FDI" was replaced by "Direct Investment - Liabilities".

The title of the Table 14.3.1 has been changed because the new balance of payments methodology (BPM6).

Table 14.4.1 has been adjusted to the new balance of payments methodology (BPM6).

Russia

Export of goods: removal of goods (commodities) from the Russian Federation territory without a guarantee of the return them back. Export includes the removal of domestically produced goods and re-export of goods as well. Domestically produced goods include also foreign manufactured goods imported into the country and significantly reprocessed and as a result changed their qualitative and technical characteristics. Re-exports – goods imported to the territory of the Russian Federation and then removed from its territory without payment of customs dues, taxes and application of embargo of economic restrictions. Recording of the exports of goods is realised by FOB prices or border prices of the exporting country.

Import of goods: importing of goods into the Russian Federation territory without a guarantee of the return then removed back. Imports include the brought goods for consumption in the economy and goods imported into the country territory in according to the reimport system. Re-imported goods are those moved out from the Russian Federation territory and then moved in this territory without payment of custom dues, taxes and application of embargo or economic restrictions. Recording of the goods import is realised by in franco-border prices of the importing country (CIF), i.e. prices of goods include expenditures on the insurance and transportation to the border of the importing country.

Balance of payments: data are presented in accordance with the 6th version of the IMF's Balance of Payments and International Investment Position Manual.

In Table 14.2.2.1, data on import and export of Russia are presented about the major trade partners and BRICS countries.

India

Exports: are credited to the country of final destination as declared by exporters in the shipping bill whether that country possesses a seaport or not. The country of final destination is defined as that to which goods exported from India are intended to pass whether by sea and land or by sea only or by air without interruption of transit, save in the course of transshipment or transfer from one means of conveyance to another.

Imports: are classified with reference to the countries whence they were consigned to India and not with reference to the countries whence they were shipped directly to India. The country of consignment is defined as that from which the goods have come whether by land or sea or by sea only or by air, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. Thus, the countries where goods are consigned are not in all cases the countries of actual origin; goods produced in one country may be purchased by a firm in another country and then dispatched after an interval to India.

The data for imports, exports and re-exports: given are according to the Indian Trade Classification (based on harmonized Commodity description and coding system).

External debt to GDP: includes long-term debts such as multilateral loans, bilateral loans, International Monetary Fund's Trade Credit, external commercial borrowings; non-resident Indian deposits, rupees debts and short-term deposit.

Under current account of the BoP, transactions are classified into merchandise (export and imports) and invisibles. Invisible transactions are further classified into three categories, namely a) Service – travel, transportation, insurance, Government not included elsewhere (GNIE) and miscellaneous (such as, communication, construction, financial, software, news agency, royalties, management and business services); b) Income; and c) Transfers (grants, gifts, remittances, etc.) which do not have any quid pro quo. Under the Capital Account, capital inflows can be classified by instrument (debt or equity) and maturity (short or long term). The main components of the capital account include foreign investment, loans and banking capital. Foreign investment, comprising Foreign Direct Investment (FDI) & portfolio investment consisting of Foreign Institutional Investors (FIIs) investment, American Depository Receipts, Global Depository receipts, Global Depository receipt (ADRs/GDRs) represents non-debt liabilities, while loans (external assistance, external commercial borrowings and trade credit) and banking capital, including non-resident Indian (NRI) deposits are debt liabilities.

China

Foreign Trade statistics and Coverage: China's official external trade statistics is implemented by General Administration of Customs of the Peoples Republic of China. It's compiled from the declarations, which are made to the Customs by imports, exports or their agents and subject to verification by customs officers at the time of customs clearance. External Statistics comprise all merchandise passing through China's Customs territory (with the exceptions mentioned below). Including: goods from abroad entering customs warehouses, bonded areas or special economic zones (SEZ) and goods leaving abovementioned areas to abroad; goods for inward or outward processing or assembling and subsequent re-exportation or re-importation; goods on lease for one year or more; goods imported or exported by foreign-invested enterprises; international aid or donations, etc. Excluding: Customs statistics do not cover temporary imports or exports; goods on lease for less than one year; travellers' personal effects; ships and aircraft' bunkers and stores obtained abroad; monetary gold and coins being legal tender; goods in transit through China.

Import and Export Valuation: Imports are valued on a CIF basis, which is based on the transaction value and all freight, insurance and other charges incurred before discharging the goods at the first port of entry of China. Exports are valued on a FOB basis, which is based on the transaction value at China's port of shipment equivalent of the actual price at which the goods are sold. The statistical value is expressed in RMB and USD respectively. Any transaction value in terms of a currency other than RMB or USD shall be converted into RMB or USD at the exchange rate issued by the State Administration of Foreign Exchange.

Trading Partner: The country of origin is recorded for imports while the country of final destination for exports. The country of origin refers to the country or region where the imported goods have been grown, mined or manufactured. If two or more countries (regions) were involved in the manufacture of the products, the place where the last substantial working or processing was carried out will be recorded as the country (region) of origin. However, where the countries (regions) of origin of the imported goods are not quite clear will be recorded as "country unknown". The country of final destination refers to the country or region where the exported goods are to be consumed, utilized or further processed or manufactured. In instances where the country of final destination cannot be ascertained, the exports will be credited to the final country (region) dispatched to as known at the time of exportation.

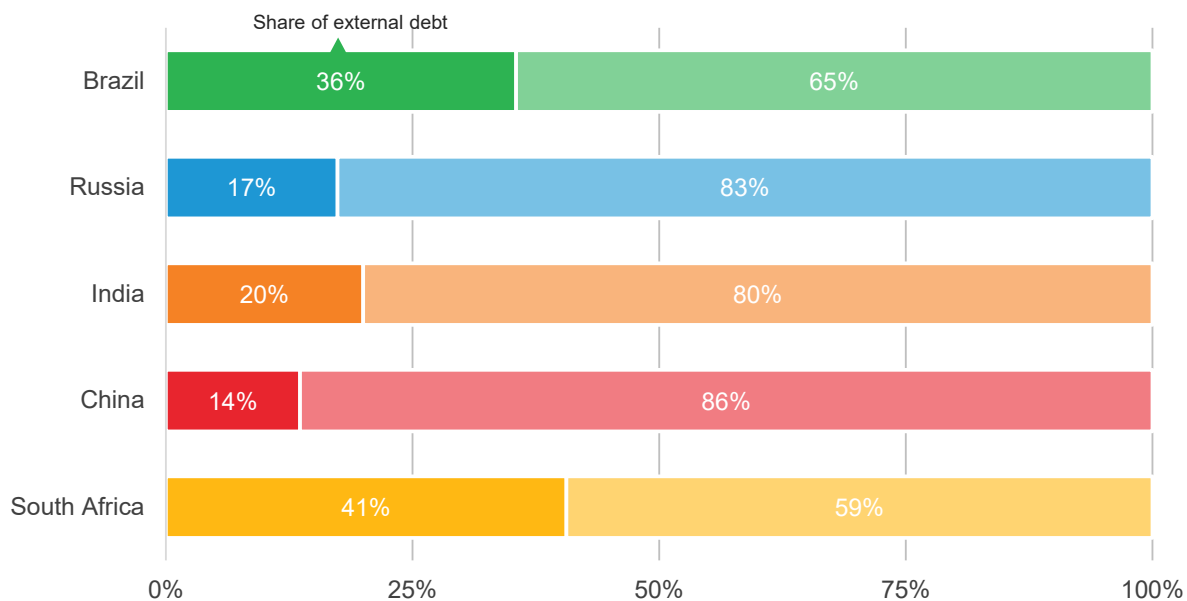

Inflows of FDI: refer to the investments inside China by foreign enterprises and economic organizations or individuals (including overseas Chinese, compatriots from Hong Kong, Macao and Taiwan, and Chinese enterprises registered abroad), following the relevant policies and laws of China, for the establishment of ventures exclusively with foreign own investment, Sino-foreign joint ventures and cooperative enterprises or for cooperative exploration of resources with enterprises or economic organizations in China. It includes the reinvestment of the foreign entrepreneurs with the profits gained from the investment and the funds that enterprises borrow from abroad in the total investment of projects which are approved by the relevant department of government.

Outflows of FDI: refer to investment made by domestic enterprises and organizations (referred to as domestic investors) in foreign countries and Hong Kong, Macao and Taiwan regions in the form of cash, in-kind, intangible assets and other ways, and the economic activities centering on controlling the operation and management of those foreign enterprises.

The Balance of Payments (BOP): is a statement that summarizes economic transactions between residents and non-residents during a specific time period.

The International Investment Position (IIP): shows at a point in time the value of: financial assets of residents of an economy that are claims on non-resident or are gold bullion held as reserve assets; and the liabilities of residents of an economy to non-residents.

14.1 Percentage share of external debts to GDP (2022)

14.2 Annual average exchange rates per US\$ (2000–2022)

Footnote

(1) Includes Australia, New Zealand, the Island of New Guinea, and neighbouring islands in the Pacific Ocean.

Explanatory Notes

General Notes

Tourism, Rome 1963:

International Visitor: An international visitor to a country is any person visiting that country on a foreign passport and the main purpose of whose visit is other than the exercise of an activity remunerated from within the country or establishment of residence in the country. This definition covers two segments of visitors: "Tourists" and "Same Day Visitors".

Brazil

Foreigner Tourist Arrival: Arrivals of non-resident persons across international borders of Brazil classified as a tourist (or overnight visitors), and with a stay for less than a year for any main purpose: 1 – Personal (Holidays, leisure and recreation, visiting friends and relatives, education and training, health and medical care, religion and pilgrimages, shopping and others); and 2 – Business and professional.

They are not counted as visitors/tourists if: employed by a resident entity, border workers, seasonal workers, other short- and long-term workers, nomads and refugees, transit passengers not entering the economic and legal territory, crews on public modes of transport, persons entering the country to establish there as their country of residence, long-term students and patients and their family, diplomats, consular staff, military personnel and their dependants, armed forces on manoeuvre.

Russia

A tourist: is a person who visits a country (place) of temporary stay for medical and treatment, recreational, cognitive, sports, professional, business, religious and other purposes without engaging in activities related to obtaining income from sources in the country (place) of temporary stay, for a period from 24 hours up to 6 months or at least one night in the country (place) of temporary stay.

Foreign (Inbound) Tourist Visit: is the visitor's travel from the moment of entry into the country to the moment of departure.

India

A "foreign tourist" is a person visiting India on a foreign passport, staying at least 24 hours in the country, the purpose of whose journey can be classified under one of the following headings:

- (i) Leisure (recreation, holiday, health, study, religion & sport).
- (ii) Business, family, mission, meeting.

China

Foreign Tourists Arrivals: refer to foreign visitor arrivals who come to China (mainland) for sight-seeing, vacation, visiting relatives, medical treatments, shopping, attending conferences or to engage in activities of economic, cultural, sports and religious. In compiling statistics, each time of entering China (mainland) is counted as one person-time.

Annexures

ANNEXURE 1 – A brief overview of the statistical system of Brazil

1. Organizational structure of the IBGE

The Brazilian Institute of Geography and Statistics (IBGE) is ruled according to the Law No. 5.878, of May 11th, 1973, and the Statute-Decree No. 11.177, of August 18th, 2022. It is linked to the Ministry of Economy, with the role of coordinating the Brazilian Statistical System and being the main producer of official statistics in Brazil.

Brazilian official statistics are produced by IBGE, Central Bank, ministries and statistical state agencies. IBGE is the official statistics bureau responsible for the production, analysis and dissemination of statistical information (demographic, economic and social), as well as geographical, cartographic and geodetic information and those related to natural resources and environment.

Besides its functions in the Statistical System, IBGE is also the main producer of geoscientific information and has the role of coordinating the National Cartographic System. One of the main projects of the production of geoscientific information is the construction of the National Spatial Data Infrastructure – INDE. The purpose of the INDE is to catalogue, integrate and harmonize geospatial data from Brazilian institutions, producers and sponsors of this kind of data, so that the data can be easily located, accessed and used for several uses and for any user who has internet access.

IBGE is responsible for the construction, provision and operation of the Brazilian Geospatial Data Site – SIG Brazil, as well as for the management of the Brazilian Directorate of Geospatial Data – DBDG. It is also responsible to prepare the proposal for obtaining the necessary resources for the implementation and maintenance of INDE.

The programs carried out by IBGE are fundamental for both the government and the society. Several public policy actions are based on the information produced by IBGE on the Brazilian reality.

In order to produce statistical and geoscientific information, IBGE is present countrywide, with units at headquarters, in Rio de Janeiro, and in state and municipal levels, with the following composition: Collegiate bodies of senior direction: Technical Council, Board of Trustees, Board of Directors; Channels of direct and immediate assistance to the President: Cabinet, Attorney General; Sectional bodies: Internal Audit, Executive Board; Specific individual organs. Directorate of Surveys, Directorate of Geosciences, Directorate of Information Technology, Centre for Documentation and Information Dissemination, National School of Statistical Sciences, 27 State Units (26 state and Federal District), with 566 agencies to collect and disseminate data.

The production of statistics and geoscientific information is carried out by the Directorate of Geosciences and Directorate of Surveys.

These directorates are supported by the Directorate of Information Technology, which ensures the infrastructure of computer hardware and software and data communication. The Centre for Documentation and Information

Dissemination is in charge of the dissemination policy for the results of all surveys carried out by the institution, publicizing them online, including micro data, free of charge.

The Executive Board is accountable for planning, budget and overall coordination of IBGE's work.

The Directorate of Surveys is responsible for the production of social, economic and demographic statistics as well as for the production of synthesis to the System of National Accounts and Social indicators. It is also responsible for coordinating the National Statistical System, systematically calling meetings with users and other producers of statistical information.

The Directorate of Geosciences is responsible for the production of geographical, geodetic and cartographic information, as well as those related to environmental and natural resources. It also coordinates the fundamentals Geodetic and Basic Cartography plans.

IBGE maintains the National School of Statistical Sciences, which offers the following courses: Bachelor of Science degree in Statistics, Post Graduate Diploma in Environmental Analysis and Land Management, Masters in Population Studies and Social Research, and training programs for IBGE technicians.

The units of IBGE at headquarters are responsible for the design of surveys, analysis of results and coordination of the teams working at the national level.

The units of IBGE located throughout the national territory are responsible for the collection, review and submission of primary statistical data to headquarters.

These units also conduct field activities related to geodesy and cartography.

2. Work program for the production of statistics

In 2017, IBGE has updated its Strategic Plan 2017–2027 in order to set goals and targets for the future.

Thus, the Strategic Plan is the main instrument of governance of the institution.

The program of work and its schedule are discussed by all technical and infrastructure areas before being consolidated into IBGE'S Strategic Plan. This is submitted to the Planning Board, composed by IBGE's President and directors, which evaluates and approves it.

IBGE's Strategic Plan subsidizes the preparation of the Federal Government Multi-Year Plan (PPA, in Portuguese) for the same period. The PPA covers all areas of government and describes the main objectives and goals for various organizations and ministries.

The institutional goals to be met in a semester have been set at the beginning of each semester. Institutional goals encompass the full range of publications planned for the period. These goals are approved by the Board and broadly disseminated, both internally and on the internet. They are an item in the objective evaluation of the institution's performance in accomplishing its mission.

IBGE's work program is presented to various Advisory Committees, which are composed of renowned members in the area, who discuss methodological issues and assist in setting priorities.

The Advisory Committees cover the following areas: Population Census, Agriculture Census; National Index of Consumer Prices; Mortality Statistics; Planning Control and Evaluation of Agricultural Statistics; Brazilian Regional Accounts.

As the demands for information not included in the predetermined work program cannot be satisfied with the resources available, they are met through agreements with the concerned governmental entities, which fund additional surveys. Examples of additional surveys are those demanded by the Ministries of Health, Education and Social Development.

IBGE also cooperates with various ministries, such as the Ministry of Finance, and the Central Bank for the preparation of National Accounts.

Annually, the Ministry of the Economy provides IBGE with the Annual List of Social Information (RAIS) and the General Register of Employed and Unemployed Persons (CAGED), which consist of the set of administrative records used to update the Central Business Register (CEMPRE) joining information from Annual Enterprises Surveys of IBGE. CEMPRE is used to select the sample of enterprises for the economic surveys, which has replaced the Economic Censuses since the 1990s. To set its long-term lines of work, IBGE holds regular meetings with producers and users of social, economic and territorial information. These meetings aim at preparing the revision and expansion of the General Plan of Statistical and Geographical Information, based on mobilization and consultation to producers and users of information, including governmental institutions, survey institutes, NGOs, scientific associations, as well as technicians and researchers interested in the production, dissemination and use of information.

This action resulted in the preparation of a diagnosis about information production in the scope of public services and the mapping of gaps, identifying opportunities for improvement and demands for new information.

The growing demand for socioeconomic and demographic information, as well as the inclusion of new issues, requires research in shorter time intervals.

In 2020 IBGE created the Pulse Enterprises Survey COVID-19 in order to get answers about the effect of the pandemic in the enterprises. It aims to estimate the impacts of the COVID-19 pandemic on the Brazilian economy, having as its survey unit the non-financial companies representing the activities of Industry, Construction, Trade and Services.

One solution to fit the statistical offices to this new reality has been the adoption of models that address a systematic conception, with the production of integrated information sources and databases.

The Integrated System of Household Surveys (SIPD) is integrated by the Continuous National Sample Survey of Household (PNAD Continuous), the Household Budget Survey (POF) and National Healthy Survey (PNS). SIPD requires intensive contact with users and producers of information. In this sense, the steps in the development of SIPD have been presented in seminars and conferences sponsored by IBGE.

In 2020 IBGE created the National Sample Survey of Household PNAD COVID-19 to estimate the number of people with reported symptoms associated with the flu syndrome, and to monitor the impacts of the COVID-19 pandemic on the Brazilian labour market.

Despite the pandemic, it is important to highlight that IBGE guaranteed the maintenance of its statistical production.

3. Social and Economic Statistics

The following Ministries and Institutions are part of the Social and Economic Statistics partnership:

- a. Ministry of Education;
- b. Ministry of the Economy;
- c. Ministry of Health;
- d. Institute of Applied Economic Research – IPEA;
- e. Ministry of Justice and Public Security;
- f. Ministry of Citizenship;
- g. National Institute of Educational Studies and Research Anísio Teixeira – INEP;
- h. Brazilian Institute of Geography and Statistics – IBGE;
- i. Central Bank of Brazil; and
- j. National Treasury Secretariat.

One of the main goals of the partnership on social and economic statistics is to integrate the various databases of social and economic information derived from surveys and administrative records, in order to promote the effective coordination and governance of the national statistical system.

4. Technical cooperation

The following nationwide technical cooperation may be highlighted:

- a. Ministry of the Economy;
- b. Ministry of Health;
- c. Ministry of Education;
- d. Ministry of Agriculture, Livestock and Supply;

- e. Ministry of Women, Family and Human Rights;
- f. Ministry of Justice and Public Security;
- g. Ministry of Citizenship;
- h. Ministry of Culture; and
- i. National Justice Council (CNJ).

Regarding international technical cooperation agreements, the following work may be highlighted: Specialized Meeting on Statistics of MERCOSUR – the Cooperation Project in Statistics towards the integration of MERCOSUR and the strengthening of its national and regional institutions through the development, improvement, harmonization and integration of the production and dissemination of statistics.

In the period 2010–2021, IBGE has been conducting international technical cooperation agreements on technology and methodology on population and agricultural censuses; social, demographic and economic statistics with many countries.

Brazil integrates the UN Global Platform. The Regional Hub in Brazil is based at IBGE and aims to contribute to the advancement in the use of Big Data and Data Science to improve the production of official statistics, promoting the sharing of knowledge and the development of innovative initiatives in Latin America and the Caribbean.

5. Interaction with the international community

IBGE has extended its participation in the international Statistical community with United Nations Statistics Division — UNSD, Statistical Conference of the Americas — SCA, Conference of European Statistics — CES, Organization for Economic Cooperation and Development — OECD, World Tourism Organization — WTO, International Labour Organization — ILO, World Bank, Inter-American Development Bank, the Community of Portuguese Speaking Countries — CPLP, BRICS, among others.

6. Courses and conferences for the press and general users

In the last two decades, IBGE has expanded the role of communication and the relationship with the press as an alternative way of publicizing its work and building its image and credibility before the public.

In press conferences, the release is available for participants at the beginning of the event. At the same time, indicators and commentary on survey results are published on the IBGE's website.

Besides structural surveys, IBGE publishes about ten short-term data on a monthly basis. Thus, approximately 100 press conferences are held at IBGE per year.

The publication of the so-called short-term data is regulated by Decree No. 355, issued on November 5, 2007, and signed by the Ministry of Planning. According to the decree, survey results must be sent to government officials at 7 a.m., i.e. two hours in advance of public access to the data, which happens at 9 a.m. As to access

to information, IBGE releases, on this website, the list of state officials who have precedence over the public, a fact that ensures transparency of the procedure.

Qualifying journalists is essential to improve the reports they write on IBGE surveys. In recent years, the Coordination of Social Communication (CCS) has organized several courses for journalists. Courses on more complex information were held (e.g. national accounts and census) as well as training for the use of digital tools that allow quick access to statistical information.

7. Access to the internet and other access

IBGE provides several ways for accessing the information it produces, so that the public is better served: publications (books and periodicals); free telephone consultation; a Central Library, located at the Centre for Documentation and Information Dissemination in Rio de Janeiro; a connection with the Department of Documentation and Information Dissemination at the IBGE State Units, located in all Brazilian capital cities.

IBGE provides electronic products and services that are the main media through which information such as specific files with data on population, economy, cartography, geodesy, natural resources and environment are accessed for free on the website. Besides the electronic publications, the IBGE web page has two important databases to stand out: Aggregated Statistical Tables (SIDRA in Portuguese) — Database with information grouped in territorial level that allows the users to construct their own tables and compare data to selected information; and Statistical Multidimensional Database (BME in Portuguese) — Database with microdata information that allows users to construct tables according to selected information and confidentiality constraints. This one requires internet subscription.

ANNEXURE 2 – A brief overview of the statistical system of Russia

Since 2017, according to the decree of the President of the Russian Federation, the Federal State Statistics Service (Rosstat) has been subordinated to the Ministry of Economic Development of the Russian Federation. Adoption of the new structure aims to align and delimit the spheres of Rosstat and the Ministry of Economic Development in matters of reconciling official statistical methodology.

Rosstat is the authority responsible for production of the official statistics on social, economic, demographic, ecological and other dimensions of society.

The national statistical system in the Russian Federation is based on the principles of centralized structure. The main task of the national statistical system is to provide timely, comprehensive and objective information on the socio-economic development of Russia, its regions and economic sectors to the governmental authorities at all levels, media, scientific community, business entities, population and international organizations. In order to achieve this aim, the Federal plan of statistical works has been developed. It defines the main directions of statistical monitoring of socio-economic and demographical processes in the country. The Federal plan is worked out by Rosstat in cooperation with other governmental agencies and adopted by the Government of the Russian Federation.

Rosstat main functions:

- To submit the official statistics in accordance with the established regulations to the President and the Government of the Russian Federation, Federal Assembly of the Russian Federation, other governmental entities, including regional authorities, media, legal entities and individuals, and also to international organizations;
- To develop and approve within its power the official statistical methodology for the federal statistical observation and official statistics production in accordance with the established regulations; to ensure that methodology complies with international standards and the UN Fundamental Principles of Official Statistics;
- To approve federal statistical observation forms and instructions on their completion;
- To coordinate activities in the field of official statistics while developing Federal plan of statistical works, proposals on its updating;
- To maintain, provide methodological support and conduct federal statistical observations and to process collected data;
- To develop and maintain national classifications of technical, economic and social data in accordance with the established regulations;
- To ensure within its power protection of confidential information received as a result of statistical observation;
- To provide users with official statistical and other information in accordance with established regulations; and
- To implement internationally adopted statistical practices, gained from the membership of the Russian Federation in international organizations.

1. Statistical system: Principles of organization

The national statistical system is a network of interacting governmental entities and bodies that collect, process and disseminate statistics, describing the pace of socio-economic and demographic development of the country. The system is developed in accordance with the administrative territorial division of the country in order to ensure provision of comprehensive and objective statistics on socio-economic development of the Russian Federation, its regions, industries and economic sectors to the public authorities and all levels of government, the media, scientific community, business entities, public and international organizations.

The system comprises two organizational levels: federal, represented by Rosstat Head Office, and regional level, represented by Rosstat regional offices.

2. Federal level of the state statistics

The Federal level of the state statistics involves Rosstat Head Office, Main interregional center for processing and dissemination of statistical information, and Rosstat Research and Development Institute of Social and Economic Statistics.

3. Regional level of state statistics

The Russian Federation is divided into 89 constituted entities (regions). Rosstat has its regional offices in 70 constituent entities, 12 of which are interregional.

Rosstat regional and interregional offices collect and process statistics, provide data to the republic, provincial and regional authorities and other users.

4. Legal basis of the official statistical activities

Federal State Statistical Service activities are regulated by the Constitution of the Russian Federation, federal laws, Decrees of the President and the Government of the Russian Federation, and international treaties of the Russian Federation.

The basis of the statistical activities in Russia is the Federal Law "On official statistical accounting and the system of national statistics in the Russian Federation" of 2007 (as amended). Carrying out of major statistical surveys, such as the Population Census and Agricultural Census, is supported by the specific federal laws.

In order to provide Rosstat with all necessary data aimed at creating national information resources, the Government of the Russian Federation issued an act on obligatory provision of primary statistical and administrative data.

5. Emerging challenges

Timely, accurate, reliable official statistics on social, economic, demographic, ecological and other dimensions of the society is vital for the country's socio-economic development and governance.

Nowadays the Russian statistical system is being developed in the environment of significant socio-economic changes, implementation of the international standards of financial data reporting. This transition defines the demand for new approaches in official statistics as well as creation of a flexible statistical information system, responding to changes occurring in the society.

Development of the statistical system is based on further technological modernization, implementation of new planning and decision-making methods, and improvement of human resources.

The principal aspect of Russian statistics modernization is higher transparency of statistical methodology and broader access to official statistics for all users.

In 2020 Rosstat introduced the 2024 Rosstat Development Strategy. It determines goals, objectives and measures for the implementation of the state regulatory policy in the field of official statistics, the development of the Federal State Statistics Service (Rosstat) and the system of official statistics of the Russian Federation until 2024. It also defines the main directions and measures for the improvement of the performance of Rosstat and the development of statistics in the Russian Federation.

The Strategy key focuses are:

- Digitalization of the statistical production process;
- Reducing the reporting burden on respondents;
- Better coordination of statistical activities;
- Meeting user needs and improving confidence in official statistics;
- Improving statistical methodology;
- Intensification of international cooperation;
- New approaches to human resource management;
- Optimization of the administrative processes in Rosstat; and
- Implementation of the projects of a national value.

ANNEXURE 3 – A BRIEF OVERVIEW OF THE INDIAN STATISTICAL SYSTEM

India, consisting of a number of States and Union Territories (UTs), has a federal structure of Government and the Indian Statistical System functions within the overall administrative set-up of the country. The division of responsibility for administration between the Union Government and the State Governments is on the basis of three-fold classification of all subjects, namely the Union List, the State List, and the Concurrent List. The Concurrent list represents the subjects where both the Union and State Governments can operate, and it includes the subject "Statistics". There is a further division of responsibility by subjects or groups of subjects among the different Ministries/Departments of the Union Government and among the Departments of State Government, on the basis of their administrative functions.

The Indian Statistical System functions on the overall pattern of the federal structure of the Government. Large-scale nation-wide censuses/surveys viz. Population Census, Economics Census, Agricultural Census and Livestock Census, various socio-economic sample surveys including the Annual Survey of Industries are centrally conducted. Compilation of National Accounts, preparation of all-India industrial production indices and Consumer Price Indices for State/UT and all-India are also centrally undertaken. The State statistical organizations collect and generate data on a number of variables focusing on the State Government's priorities. Ministry of Statistics and Programme Implementation (MoSPI) at Central level and State Directorates of Economics and Statistics (DESSs) at State level coordinate the overall statistical activities in their respective domains.

1. Statistical System at the Centre

The Ministry of Statistics and Programme Implementation (MoSPI) is the nodal agency for planning and facilitating the integrated development of the statistical system in the country, including laying down norms and standards in the field of official statistics, evolving concepts and definitions, suggesting methodologies of data collection, processing and dissemination of results. The Ministry has two wings viz. the National Statistical Office (NSO), commonly called 'Statistics Wing' and the 'Programme Implementation (PI) Wing'.

2. National Statistical Office (NSO)

The NSO is headed by the Secretary and Chief Statistician of India, assisted by three Director Generals. The National Statistical Office is responsible for coordination of statistical activities in the country, and evolving and maintaining statistical standards and has 12 major Divisions under the three Director Generals: (i) National Accounts Division (NAD), Economic Statistics Division (ESD), Price Statistics Division (PSD), and Social Statistics Division (SSD) are under Director General (Statistics); (ii) Intra, Inter and International Coordination Unit (IIICU), Policy Implementation & Monitoring Division (PIMD), Computer Centre (CC) and Training Division are under Director General (Coordination & Administration); and (iii) Survey Design and Research Division (SDRD), Field Operations Division (FOD), Data Quality Assurance Division (DQAD) and Survey Coordination Division (SCD) are under Director General (National Sample Survey).

NSO has a premier training institute called the National Statistical Systems Training Academy (NSSTA), which has been conducting national/international statistical training programmes since its inauguration in February 2009 for capacity building in the area of official statistics.

3. Programme Implementation Wing

The Programme Implementation Wing is headed by the Secretary and Chief Statistician of India assisted by an Additional Secretary. This Wing has two divisions viz. Infrastructure Project Monitoring Division (IPMD), and Member of Parliament Local Area Development Division (MPLAD). IPMD compiles report on on-going Central Sector Infrastructure Projects costing Rs. 150 crore and above on time and cost overruns to provide an overview of the performance with a view to highlight slippages, if any, in respect of Power, Coal, Steel, Railways, Telecommunications, Ports, Fertilizers, Cement, Petroleum & Natural Gas, Roads, and Civil Aviation. MPLAD scheme provides a mechanism for Members of Parliament to recommend works of developmental nature for creation of durable community assets based on the local needs. The scheme addresses locally felt development and infrastructural needs of the community and bridges the gap for developmental works.

MoSPI, both NSO and PI wings, generate a lot of statistical information that is used by policy planners, researches and other users. Besides the NSO, most of the Ministries/Departments in the Union Government dealing with different subjects such as Agriculture, Water, Health, Education, Labour & Employment, Rural Development sectors, etc. have their own statistical establishments to perform statistical activities for the respective Ministries/ Departments, and they are generally headed by senior level statistical functionaries to facilitate proper coordination with NSO. Most of these Departments bring out respective statistical data/publications.

4. National Statistical Commission

The National Statistical Commission (NSC) was constituted on 12 July 2006 to serve as a nodal and empowered body for all core statistical activities of the country and to evolve, monitor and enforce statistical priorities and standards and ensure statistical co-ordination. The NSC has four Members besides a Chairperson, each having specialization and experience in specified statistical fields. The functions of the commission consist of identifying the core statistics, which are of national importance and are critical to the development of the economy; constituting professional committees or working groups to assist the Commission on various technical issues, exercising statistical coordination between Ministries, Departments and other agencies of the Central Government, monitoring and reviewing the functioning of the statistical system in the light of laid down policies, standards and methodologies and recommending measures for enhanced performance.

5. Indian Statistical Institute

The MoSPI also has an autonomous Organization under its domain, viz. the Indian Statistical Institute (ISI), which is a premier statistical institute of international repute, devoted to research and teaching, and the applications of Statistics in the Natural and Social Sciences. Founded by Professor P.C. Mahalanobis in Kolkata on 17 December, 1931, the institute gained the status of an Institution of National Importance by an act of the Indian Parliament in 1959. The Headquarters of ISI is located in Kolkata with four centres located in Delhi, Bangalore, Chennai and Tezpur and a branch in Giridih.

6. Statistical System in the States

The Directorates of Economic and Statistics (DESs) in the States/UTs act as the nodal agencies for coordination of all statistical activities in the States/UTs. Most of the States/UTs have District Statistical Offices (DSOs) which act as the field offices for collection and compilation of statistical data for the districts. The DESs perform almost the same functions in the States/UTs as the NSO at the Centre, viz., bringing out some key statistics, coordination with the Central and State statistical agencies, dissemination of statistics, etc.

7. Legal support for collection of data

Data collection in India is largely based on a voluntary response. However, a legal framework is also available in the form of the Collection of Statistics Act 2008, Census Act 1948. The Collection of Statistics Act 2008 is administered by the Ministry of Statistics and Programme Implementation while another Act viz. Census Act 1948 is administered by the Office of the Registrar General and Census Commissioner of India under the Ministry of Home Affairs, to collect population and other demographic data. Besides the two important Acts, there are a number of other Acts, Rules and Procedures administered by concerned line Ministries/Departments for collecting statutory administrative returns, which generate data on the related subject.

8. Initiatives

A Unified Data Platform for management and dissemination of key Indicators of key data products of MoSPI is at the conception stage.

For adoption of best practices in the field of Big Data and alternative data sources in official statistics, India has recently acquired the official membership in United Nations Global Working Group on Big Data for Official Statistics.

MoSPI has developed and implemented e-SIGMA platform for conducting surveys through Mobile Devices. This facilitates real-time data collection, validation and processing of data and also helps in reducing the time lag in releasing the survey results.

9. Emerging challenges

In the face of rapid major technological and socio-economic changes, the official statistical landscape is becoming more complex, expectations of policy makers are increasing exponentially, and the system is expected to deliver the best possible statistics in more efficient and innovative ways.

As a result of increased penetration of digital technologies, the amount of information available is rapidly increasing exponentially with improved access to the public. The central and state governments are tremendously intensifying their efforts to harness these new sources of data. These developments provide a new challenge for the national statistical system to align and converge the information flow across varied sources so that an integrated picture emerges for more effective and timely policy interventions.

Monitoring of progress on Sustainable Development Goals (SDGs) also places new demands on the need for quality data and statistics, disaggregated by location, sex, age, income group and other dimensions of development. The NSO is taking the lead to respond to these demands by harnessing administrative sources and surveys.

There is a need to evolve innovative techniques for exploiting new data sources (big data sources, etc.) and will require involvement of research and other institutions so that new ideas can be crowd sourced, incubated and developed for use in the national statistical system.

ANNEXURE 4 – A BRIEF OVERVIEW OF THE STATISTICAL SYSTEM OF CHINA

Since its establishment, the National Statistical System of the People's Republic of China has been developed and improved in over 70 years' process of reform and adjustment to meet the new demands for the new conditions and situation. The Statistical Law of the Peoples Republic of China stipulates that the State shall establish a centralized and unified statistical system, with a statistical administrative structure under unified leadership and with each level assuming responsibility for its own work. The Statistical System of Chinese Government organizes and undertakes statistical surveys, collects, compiles and releases statistical data, and provides high-quality statistical services for economic and social development based on laws.

1. Government Statistical System

The government statistical system comprises the government comprehensive statistical system and the government departmental statistical system. The government comprehensive statistical system consists of the statistical institutions established through a top-down model and relevant statistical staff from all the administrative levels. The National Bureau of Statistics is established under the Central Government, and independent Bureau of Statistics are established in local governments at and above the county level. Governments of townships and towns are staffed with full-time or part-time statisticians, who are responsible for the statistical work.

1.1 National Bureau of Statistics of China

As an organ directly under the State Council, the National Bureau of Statistics of China (NBS) is responsible for directing and coordinating the statistical work throughout the country. In the entire national statistical system, the NBS is a main provider of national statistical data and an organizer, leader and coordinator of the government departmental statistics and local statistics. Pursuant to the Statistics Law of the People's Republic of China and other national regulations, the main function of the NBS is to be responsible for organizing, directing and coordinating the statistical work throughout the country, to formulate statistical policy and plan, basic national statistical systems and unified statistical standards, approve the statistical standards of departments; to draw up a plan or scheme for important general surveys of the national conditions and strength jointly with the government departments concerned; to organize and conduct the major surveys on national conditions and strength such as Population Census, Economic Census and Agricultural Census; to organize and conduct statistical surveys of key industries of the economy, collect, aggregate, collate and provide the statistical data related to the surveys, and synthetically collate and provide the basic national statistical data; and to check, administer and publish the basic national statistical data, and administer the departmental and local statistical survey programs by law.

The NBS internally sets up 19 functional departments and 12 institutions directly under the NBS, responsible for integrated coordination, construction of statistical laws and regulations, formulation of statistical systems and standards, organization and implementation of statistical surveys, national accounts, economic analysis, data dissemination and development, etc.

The NBS of China also establishes Survey Offices in each province (autonomous region, municipality) and a survey team in each city (prefecture, autonomous prefecture and league) and in one-third of counties (cities at county level, districts and banners), which are as agents detached by the NBS and vertically administrated under the NBS, and are mainly responsible for the surveys of key statistical data required for the macroeconomic control and national accounts assigned by the NBS mainly through sampling surveys.

1.2 Local Bureau of Statistics

Independent Statistical institutions are established in local governments at and above the county level, and statistical stations are established or statisticians are staffed in governments of townships and towns, who are responsible for carrying out tasks of national statistical surveys and for organizing, guiding and coordinating the statistical work in their respective administrative areas. The statistical institutions of local governments at various levels are subordinated to the dual leadership of the governments at their level and the statistical institutions at higher level, in terms of statistical work, mainly under the leadership of the statistical institutions at higher level.

1.3 Departmental Statistical System

According to the needs of statistical work, other ministries of the Central Government and departments of local governments at various levels establish statistical institutions or recruit statisticians, forming the departmental statistical system. Its main function is to organize and govern in accordance with laws and regulations the statistical work within the departments, and execute the tasks of national statistical surveys; to draw up and carry out statistical survey plans of the departments and to collect, compile and provide statistical data required by the departments and the society; to make statistical analysis and exercise statistical supervision over the development of the departments and of the industries under their jurisdiction.

2. Statistical Laws

Government agencies (mainly statistical agencies) and statistical respondents must comply with the statistical laws, and organize or support statistical surveys according to the statistical standards and statistical survey methodologies formulated based on the laws.

The Statistics Law of the People's Republic of China was initially formulated in 1983 and revised twice in 1996 and 2009 respectively by the Standing Committee of the National People's Congress of China. Based on the reality of the economic and social development and statistical work, the Statistics Law embodies the basic spirits of the Fundamental Principles of Official Statistics of the United Nations and is the basic guidance for undertaking statistical work.

In order to implement the Statistics Law, a series of statistical laws and regulations were formulated, such as Regulations for the Implementation of the Statistics Law of the People's Republic of China, Regulations for National Economic Censuses, Regulations for National Population Census and Measures for Survey Programs of Departmental Statistics, etc. Statistical surveys are categorized as national, departmental and local surveys as per the Statistics Law, and strict approval and management procedures are formulated accordingly.

3. Statistical Surveys

The NBS collects statistical data mainly through periodical censuses and regular statistical surveys, and sorts out statistical data through ad hoc surveys and administrative records. At present, the NBS organizes and conducts major surveys on national conditions and strength such as Population Census, Agricultural Census and Economic Census; around 70 regular statistical surveys are also undertaken in areas like agriculture, industry, energy, investment, construction, trade and external economy, services, urban and rural households, price, society and science and technology, labour force, wages and salaries, etc. The contents of both the censuses and surveys basically cover all the aspects concerned with economy, society, population, environment and resources.

The government departmental statistics involve traffic, tourism, finance, banking, import and export in customs, utilization of foreign capital, culture, education, health, science and technology, household registrations, social development, etc.

4. Release of Statistics and Provision of Statistical Products

In order to provide the official statistics and products on China to the whole society more in quantity, shorter in time lag, and better in quality, the NBS releases statistical survey data and provides processed statistical products via various channels and forms. For the time being, a mechanism of regular releases of statistical information has been established, with forms like press conference, internet, public database, "Statistics Info" through WeChat, official mobile information service platform, and paper publications (mainly yearbooks) combining and complementing each other. This mechanism ensures that the release and provision of statistical data and products is more efficient in time, richer in contents and available to wider users. The NBS has set up micro data laboratories for the development and utilization of micro data by experts from government departments under the State Council, relevant institutions of higher learning and research institutions. In addition, the statistical institutions in 31 provinces, autonomous regions and municipalities (excluding Hong Kong Special Administrative Region, Macao Special Administrative Region and Taiwan Province), as well as in many cities and counties have also established their own mechanism for regular data release, which contributes to forming a hierarchical and widely covered layout for statistical data release and products provision in China.

5. The Reform and Development of China's Statistics

China's economy is at an important stage of structural transformation and upgrade. The fast development and profound change in China's society and economy have posed newer and higher demands on the statistical system in China. Since 2012, with its great efforts on reform of the statistical production modes, the NBS has basically established a business register of establishments featuring authenticity, completeness and timeliness, a standardized and uniform questionnaires system for business surveys, the convenient and applicable software for data collection and processing, and a safe and efficient online direct reporting platform for business statistics across China. With an open attitude and the courage to innovate, the National Statistical System in China is actively seeking reform on national accounts, exploring and promoting statistical monitoring on the new economy (new industries, new business forms and new business models), and developing and improving relevant statistical standards to better

serve the socio-economic development. Meanwhile, the National Statistical System in China is also actively advancing interdepartmental information sharing, tapping the potential of big data by taking advantage of administrative records and survey data from other departments, and gradually enhancing the role of big data in terms of assessment, supplement and substitution of regular statistics. In 2021, the NBS formulated the Reform Plan for Statistical Modernization during the 14th Five-Year Plan Period, to accelerate the reform of statistical modernization. China will continue to improve the statistical institutions and mechanism with unremitting efforts, reform the statistical systems and methodologies, improve the statistical production mode, strengthen the role of statistics-based oversight, improve the statistical services, enhance the statistical guarantee capacity, and accelerate the construction of a modern statistical survey system that meets the modernization requirements of the national governance system and governance capability.

ANNEXURE 5 – A BRIEF OVERVIEW OF THE STATISTICAL SYSTEM IN SOUTH AFRICA

Notwithstanding that the South African statistical system is over a 100 years old, for many years it only served the needs of a section of the population. The entire nation was brought into the data ecosystem only after the dawn of democracy in 1994; the democratic dispensation has provided the opportunity for the transformation of the statistical system to serve all South Africans.

New statistical legislation, the Statistics Act (Act No. 6 of 1999), was promulgated in 1999. The Act specifically provided for a Statistician-General as executive head of Statistics South Africa (Stats SA) as well as coordinator of statistics produced by other organs of state. It was a landmark for the production of statistics in the country because it defined a new direction for the strategic and work programmes of Stats SA, as well as defining the role of other organs of state in the production of statistics.

Stats SA has, over the past 28 years, worked tirelessly to build a world-class organisation which is part of the national system of statistics.

External disruptions, including the COVID-19 pandemic and the digital and data revolution, are changing the world. Revolutionary advances in technology are reshaping the way data and information are sourced, generated and disseminated. User needs for data and information to address the socio-economic challenges in the country are growing exponentially. The system of national statistics in South Africa is not fully responding to the country's diverse and wide-ranging information needs. The system must seek opportunities that will capitalise on these diverse and new data sources as a solution to the country's information gap, but it will necessitate extraordinary intervention and investments. The data ecosystem provides an opportunity for statistical systems to redefine their business models, embracing new participants that are more agile than current conventional data producers.

Stats SA's 2020–2025 strategic plan builds on the gains made in the past while setting out an ambitious path of embracing an evolving data ecosystem that will transform the way the organisation works, and the way it leads the statistical system in the country to be responsive to growing user demands for sustainable development.

The following four strategic outcomes are guiding the NSO to achieve its vision:

- **Insightful data** – Data and information are responsive to user demands and bring deeper understanding and insight for informed decisions. Insightful data speaks to the information requirements for the development and sustainability concerns of humankind, at a level that is within the grasp of the nation's people and global citizens.
- **Agile operating model** – The business operations are lean, efficient and flexible. An Agile operating model enables flexibility and responsiveness to the use of innovative development practices to deliver statistical products and services to users better, faster and more cost efficient.
- **Interconnected statistical systems** – People, systems and technology are interconnected through collaboration, partnerships and platforms. An Interconnected statistical system is a network of various data

systems, institutions, technological resources, human resources and partnerships based on shared principles that are interoperable and interconnected.

- Transformed capability – The capability (people, systems and technology) of the organisation and statistical system is transformed. Transformed capability refers to a major shift in an organisation’s strategic capabilities in terms of its human, technological and organisational capital so that it can drive business transformation and change in order to remain relevant and deliver better outcomes for its stakeholders.

Throughout the COVID-19 crisis, Stats SA continued to deliver on its core statistical programme, albeit under difficult conditions, to ensure that the best quality data and statistics are available for decision-making. Now, more than ever, our country needs reliable and trustworthy data and statistics to inform critical decisions that will shape our tomorrow and impact generations to come.

We commenced with the Population Census 2022 project as part of the 2020 World Population and Housing Census Programme within a very challenging environment. This population census is the first census ever that will be delivered on a digital platform using new and innovative methodologies and technologies. Households had a choice of completing the questionnaire online (self-enumeration) or with the assistance of a fieldworker either telephonically or face-to-face. We are proud to mention that we are the first African country to run a census on an internally developed application.

As we continue to battle with the effects of COVID-19, the organisation has devised alternatives to deal with the new normal. We have adapted our methods to some degree; however, the pandemic has underscored the need to upscale our efforts to create an agile operating model, particularly in times of crisis and disruption. We will continue our efforts to modernise operations, to upgrade critical infrastructure, to invest in innovative methodologies and technologies, to provide flexibility, and to increase our investment to reskill our staff for the new environment.

In pursuit of our vision of Improving lives through data ecosystems, our strategic focus over the next five years will remain on:

- Sustaining the quality of national indicators to inform evidence-based decisions and bringing new insights to users;
- Driving legislative reform to strengthen statistical coordination in the country; and
- Driving a transformation and change agenda to optimise, innovate and diversify the operations and capability of the organisation in the data ecosystem.

ANNEXURE 6 – SUSTAINABLE DEVELOPMENT GOALS FOR BRICS

The Sustainable Development Goals (SDGs) are the blueprint for achieving a better and sustainable future for all. The United Nations General Assembly during its 70th Session in September 2015, with the aim of taking forward the success of Millennium Development Goals, adopted the document titled "Transforming our World: The 2030 Agenda for Sustainable Development" consisting of 17 Sustainable Development Goals and associated 169 targets. The SDGs came into force with effect from 1 January 2016.

The SDGs are a comprehensive list of global goals integrating social, economic and environmental dimensions of development. Moreover, the SDGs are universal (for all nations – developed, developing and least developed), interconnected and indivisible and hence necessitate comprehensive and participatory approaches in bringing everybody together so that no one is left behind. Countries are primarily responsible for following up and reviewing the progress made in implementing the goals and targets at the national level until 2030.

The Sustainable Development Goals provide an international framework to move by 2030 towards more equitable, peaceful, resilient, and prosperous societies – while living within sustainable planetary boundaries. The SDGs are not legally binding, but have become de-facto international obligations and have the potential to reorient domestic spending priorities of the countries up to 2030. Countries are expected to take ownership and establish a national framework for achieving these goals. Implementation and success will depend on countries' own sustainable development policies, plans and programmes. The 2030 Agenda also underscored the fact that quality, reliable and disaggregated data would be needed for measurement of progress on the targets and for ensuring that "No One is Left Behind".

1. BRAZIL

In Brazil, the national coordination for the SDG Global Framework lies with the Brazilian Institute of Geography and Statistics (IBGE). IBGE responds as the National Statistical Office (NSO) for the country and is an institution of the Federal Government under the Ministry of Planning and Budget (MPO).

IBGE has been working at different levels. At the global level, the Institute is a member of the Inter-agency and Expert Group on SDG Indicators (IAEG-SDGs), representing Brazil, Chile, and Mercosur countries continuously since 2015. Also, the Institute has been taking part in thematic sub-groups (TCG-UNESCO, TOSSD International Task Force, Geospatial Information, SDMX, SDG Indicator 15.4.2 and so on). In line with the United Nations Resolution A/RES/71/313, which stresses that official statistics constitute the basis needed for the global indicator framework, IBGE is the country focal point for the UN Custodian Agencies. At the regional level, IBGE has been participating in the Statistical Coordination Group for the 2030 Agenda, with the leadership by ECLAC – Economic Commission of Latin America and Caribbean.

At the national level, IBGE participates as a permanent technical advisory body of the National Commission for the Sustainable Development Goals, created through Decree nº 11.704/2023. The Commission is a parity collegiate body, of an advisory nature, responsible for contributing to internalize and stimulate the 2030 Agenda within the

country (governments at all levels and civil society). As the coordinator of national official geoscientific data and statistics, IBGE responsibilities include providing guidance on the discussion on global indicators, subsidies for discussions about the definition and monitoring of the national indicators, assessing and producing data, and supporting the preparation of future reports.

Regarding the national coordination mechanisms to produce the SDG Global Indicators, the IBGE Presidency is responsible for the coordination of the Project. There are two coordinators for each SDG and the support of eight Units at IBGE. There are 67 people involved partially at the Institute (SDG coordinators, collaborative personnel, members of the Committee). Also, 17 inter-institutional working groups were created for each SDG under the guidance and coordination of IBGE. These groups collaborate to produce the SDG indicators.

In the pursuit of an increased level of institutionalization, IBGE created in 2023 an internal governance body, the Sustainable Development Goals Indicators Production Committee. The Committee is responsible for coordinating the process of production and dissemination of the SDG indicators for monitoring the targets of the 2030 Agenda. This coordination operates closely with other institutions that produce official data and ensures the use of quality, updated, reliable and disaggregated data. So far, along the production of the SDG indicators, 26 entities of the National Public Administration have collaborated with 65 public employees taking part in working groups. About 60% of the indicators were calculated by other national information producers in collaboration with IBGE.

Along the previous years, IBGE held three conferences with other national data producers to discuss the global SDG indicators and their production (2015, 2017 and 2018). The conferences were important as a venue to convey guidance and share experiences, to reinforce institutional partnerships and the relationship with focal points, to keep the teams motivated and to promote publicity within the public administration. During the third conference (2018), IBGE launched the Brazilian Official Platform of SDG Indicators.

The Brazilian SDG Indicators Platform (<https://odsbrasil.gov.br/>) is the result of a collaborative effort of the national data producers, coordinated by the Brazilian Institute of Geography and Statistics, IBGE. The Platform for dissemination and information sharing is composed of two parts: one is dedicated to the promotion and sharing of SDG information (news, events, videos). The other part, aligned with the Global Indicator Framework, is the core of the Platform and makes available the global SDG indicators and their methodology sheets through a user-friendly interface.

The Platform integrates different IBGE applications, taking the best advantage of the infrastructures in Information Technology and the acquired experience using different resources. Three digital tools for the production, analysis and communication of SDG indicators should be noted: SIDRA database, Interactive Geographic Platform (PGI), and the Statistical Metadata Database.

The SIDRA application allows access to IBGE Statistical Tables Database, which contain tables numerated uniquely regarding the subject investigated and contains the aggregate results of the surveys and census conducted by the Institute. SIDRA allows the user to save the query and can be assessed through an Application Programming Interface (API). For SDGs, the user can assess the indicator Platform and, if needed, move to SIDRA.

The Interactive Geographic Platform (PGI) was developed by IBGE for geospatial information analysis. Once in this Platform, the SDG indicators can be analyzed together with other elements of interest, such as roads, rivers, maps or any geoservice published in the National Spatial Data Infrastructure (NSDI).

The IBGE Statistical Metadata System has a specific section for the SDG metadata where the analysts fills out the standardized methodology sheets (MS), taking into account elements that completes the metadata and avoid duplicate efforts, such as: concepts and definitions, calculation formula, unit of measurement, variables and respective official data sources and data producers, geographical scope, disaggregation, target population, periodicity, temporal series, indicator producer, contact person and references. The methodology sheet has technical specifications of each indicator, enabling comprehension and a good base for analysis.

The Statistical Metadata System allows the participation of other national data producers who can complete the MS as well (previously registered and using a password). This procedure also contributes to the collaborative process of producing SDG indicators and is one of the ways to address quality assurance. In addition, the MS are presented to users in the SDG Platform, giving important technical information, ensuring transparent data accessibility and easier use.

So far, 121 global indicators using national official data are available at the SDG Platform. A total of 42 indicators are presented by Federation Units. IBGE and the public administration partners employ different data sources, mainly a combination of administrative data and survey data. Also, some indicators use geospatial data, monitoring data and non-statistical data. A total of 67 indicators has some type of disaggregation (by sex, age, education level, urban/rural, for example).

The 2030 Agenda and the production of the SDG indicators brings constant challenges and opportunities to the National Statistical Offices. As much as introducing new surveys or including thematic sections in surveys that already exist is no minor task, the SDG Agenda promotes leverage. For example, the Continuous National Household Sample Survey (PNADC), IBGE main household survey, investigated in the 4th quarter of 2021 the sense of public security and crime victimization (theft). The results enabled the publication of indicators 16.1.4 (proportion of population that feel safe walking alone) and 16.3.1 (proportion of victims of violence in the previous 12 months who reported their victimization).

2. RUSSIA

2.1 SDG monitoring at the national level

The active work on SDG monitoring at the national level began in 2016. Rosstat joined the Interdepartmental Working Group under the Presidential Administration of the Russian Federation on issues related to climate change and sustainable development (IWG), which is headed by the presidential adviser.

In February 2017 a special expert group on information and statistical support for monitoring SDGs was established for a detailed elaboration of the SDG indicators. This group is chaired by Rosstat and includes representatives of more than twenty ministries and federal agencies, as well as of the Bank of Russia and the Accounts Chamber of the Russian Federation. The representatives of various Russian scientific institutions and expert community also take part in the work of the expert group.

Taking into account international recommendations to national statistical offices to take a leading role in coordinating data flows in order to report on the SDGs at the national level by order of the Government of the Russian Federation of June 6, 2017 No. 1170-r, Rosstat has been authorized to coordinate the activities on SDG indicators.

In 2017 a special section 2.8 for SDGs, consisted of 87 indicators from the global list of SDG indicators, has been integrated to the Federal Plan of Statistical Works (FPSW), the main document in the Russian Federation, which contains the list of works on the formation of official statistical information. By November 2020 the number of indicators increased to 99. As of 2023 there are 116 global SDG indicators in the 2.8 section of the FPSW, 31 of them are disaggregated by regions of Russia. Along with Rosstat, 24 ministries and federal agencies provide data on SDGs. Further development and increase of the number of global indicators provided to users is one of the most important goals of our work.

In accordance with international recommendations and in order to track progress in achieving the SDGs at the national level, a national set of SDG indicators was approved in 2020, which initially consisted of 160 indicators (88 disaggregated by regions of Russia), distributed across all 17 SDGs. Recognizing the tasks defined by strategic documents of the Government, one of our priorities was to create a national set, which reflects national characteristics, local conditions and statistical capacity. Since the national set of SDG indicators is a flexible tool for tracking progress in achieving the SDGs, in 2022 it was updated, and the number of indicators has increased to 176 (112 of which are disaggregated by regions of Russia).

The Statistical Yearbook “SDGs in the Russian Federation” is also published annually on the Rosstat website in English and in Russian. Every edition includes data for 17 SDGs, as well as some indicators with regional disaggregation (since 2020) and the section of international comparisons. The extended statistical annex to the Yearbook is also published on the website. From year to year, the number of indicators in the Yearbook is growing, including through the new indicators with regional disaggregation. The 5th edition of the Yearbook will be published on the Rosstat website in December 2023.

In order to provide informational support for SDG monitoring process at the national level, a special section was

launched on the Rosstat official website. It contains general information on SDGs, a detailed list of indicators with their current development status and metadata on more than 200 SDG indicators, up-to-date information on activities at the national and international levels, publications on SDGs and references to useful international resources.

2.2 Participation in SDGs monitoring at the international level

From the very beginning (2015–2021) Russia was a member of the Inter-Agency and expert group on SDGs indicators and its working group on Measurement of Development Support (2020–2021), and actively participated in the preparation of international documents related to SDGs, including reviews of indicators methodologies, documents and pilot projects developed by the Group. Despite the mandatory rotation of group members, Rosstat representatives continue to take an active part in open meetings and consultations of the IAEG-SDGs.

Until 2022 Russia was a member of the Steering Group of the Conference of European Statisticians on Statistics for the SDGs and participated in development of the Roadmap for the generation of statistical data for monitoring the SDGs and its subsequent implementation. The first edition of the roadmap was approved in 2017, the second one – in 2022.

To date the Russian Federation continues to be a member of the IAEG-SDGs Working group on SDMX, which brings together representatives from 12 countries and 10 international organizations. SDMX is an international initiative that aims at standardising and modernising (“industrialising”) the mechanisms and processes for the exchange of statistical data and metadata among international organisations and their member countries. The number of SDG indicators sent and successfully validated by the UN via SDMX increased from 53 in 2019 to 86 in 2023.

2.3 Initiatives to fill the data gaps

Identification and elimination of SDG data gaps remain a key priority for Rosstat. To increase the availability and comparability of SDG data at the international level and build statistical capacity, Rosstat actively participates in international consultations and exchange of experience on the development of SDG indicators and introduction of new data collection tools.

Since accurate, high-quality and timely data are necessary to monitor progress towards achieving the SDGs, Rosstat also regularly organizes an internal process of validating the SDG data published for the Russian Federation in the global databases. Based on the results of the validation, inconsistencies, as well as data gaps, in global and national data are identified, and updated statistical information is provided to the custodian agencies.

Since not only country-level monitoring, but also regional data is critical to achieving the 2030 Agenda principle of “Leaving no one behind”, Rosstat strives to provide more detailed statistical information on SDG indicators disaggregated by regions of Russia and to fill gaps in regional data.

Rosstat continues to work on capacity building in the field of monitoring the SDGs, more than 20 ministries and federal agencies are involved in this work. All information about the monitoring process is publicly available for the convenience of users at the Rosstat official website. Rosstat is always ready for cooperation, exchange of experience and implementation of best practices.

3. INDIA

India is committed to implement the SDGs based on the nationally defined indicators responding to national priorities and needs. In this effort, towards integrating SDGs into country's on-going national and sub-national policies and programmes, at national level, NITI Aayog has mapped the SDGs with centrally sponsored programmes of concerned Central Ministries/Departments.

Further, Ministry of Statistics and Programme Implementation (MoSPI), developed a National Indicator Framework (NIF) for SDGs, along with identified data sources and periodicity following due consultation process with concerned Ministries/Departments, UN Agencies and other stakeholders. NIF is the backbone for facilitating monitoring of SDGs at the national level. The NIF, like Global Indicator Framework, is evolving in nature and necessitates refinement time to time and hence, NIF is being periodically reviewed and refined. At present, NIF (2023) consists of 284 indicators out of which data is available on 270 indicators (i.e. data is available for more than 95% of the SDG indicators in NIF). Based on the latest NIF, MoSPI releases annual progress report on SDGs on 29th June, every year. The progress report provides the time series data on the national indicators included in NIF, which are also used for assessing the progress made towards achieving the SDGs.

MoSPI has taken several steps in bridging the data gaps relating to SDG indicators. The Ministry holds regular consultations with line Ministries/Departments and the respective Custodian Agencies. To institutionalize such deliberations, MoSPI, NITI Aayog and the United Nations represented by United Nations Resident Coordinator Office (UNRCO), New Delhi, India have entered into a Tripartite Memorandum of Understanding (MoU) relating to support for Data, Indicators and Statistics for monitoring Sustainable Development Goals (SDGs) in India. The overall purpose of the MoU is to collaborate on issues related to support for statistical monitoring of Goals and Targets of SDGs, including the use of new technologies, capacity development to track SDG related outcomes and any other emerging requirements.

MoSPI also provides technical support to the States/UTs for developing the sub-National Level Indicator Framework considering their priorities. In this context, MoSPI developed the "Guidelines for Development of SDGs State Indicator Framework (SIF)" in July 2019 and further updated these guidelines in March 2022 in its publication "Guidance on Monitoring Framework for SDGs at Sub National Level". This publication is aimed to facilitate and assist State Governments in the development and refinement of the sub-national level monitoring framework by providing comprehensive guidance.

The Government of India has been observing 29 June every year, since 2007, to mark the birth anniversary of late Professor Prasanta Chandra Mahalanobis as 'Statistics Day' in recognition of his valuable contribution in the field of Economic, Planning and Statistics. On each Statistics Day, one particular theme of current national importance is chosen for intensive and focused discussions towards filling the data gaps and improvement of timelines /quality in that area. As a follow-up, several seminars/workshops/trainings are being organized during the year on the theme. Considering the importance of SDGs, the theme for Statistics Day is being set around SDGs since 2019.

4. CHINA

Since the establishment of the "Inter-ministerial Coordination Work Mechanism for 2030 Agenda for Sustainable Development" in 2016, with the promotion of the Ministry of Foreign Affairs of China, annual statistical monitoring results such as China's National Plan on Implementation of the 2030 Agenda for Sustainable Development, China's VNR Report on Implementation of the 2030 Agenda for Sustainable Development, China's Progress Report on Implementation of the 2030 Agenda for Sustainable Development, and Big Earth Data in Support of Sustainable Development Goals have been successively developed and released, especially the Global Development Report released in 2022. Increasingly rich and detailed data are used to display the progress made by China in implementing the sustainable development goals, and present the typical cases and successful experiences of China's implementation of SDGs in areas of targeted poverty alleviation, innovation leadership, ecological civilization, and rural revitalization. Meanwhile, the NBS attaches great importance to capacity building for SDG statistical monitoring. With the China-United Nations Trust Fund Project on Statistical Capacity Development, the NBS promotes national statistical capacity building and statistical systems modernization, and makes positive contributions to statistical capacity building of countries in the Asia-Pacific region and other developing countries. In 2021, the United Nations Global Platform for Big Data China Hub was established to explore new ideas and methods for applying innovative technologies and new data resources in advancing SDG statistical monitoring.

5. SOUTH AFRICA

The advancement of the SDGs in South Africa has taken center stage in all national, provincial and local policies. The development of its citizens are underpinned by the "People, Planet, Prosperity, Peace and Partnership" approach of the United Nation's (UN) global goals.

The development outcomes of the country are therefore described as a comprehensive process in which the government aspires to transform society, the economy, and state of the environment. Such a transformation is expected to result in an improvement in the life circumstances of its citizens. The forgoing development outcomes are described in South Africa's National Development Plan (NDP) and it provides a set of national targets that serve as markers in the transformation process, and inevitably will assist in the realisation of the development outcomes by 2030.

The NDP provides the blueprint through which South Africa hopes to achieve its development objectives. While the NDP is not the only development agenda South Africa is committed to implementing, it is the most critical, as all other development frameworks need to be aligned to it.

Over the past decade, Statistics South Africa (Stats SA) coordinated the reporting process on the Millennium Development Goals (MDGs) and the Sustainable Development Goals (SDGs), and participated in the development and reporting on the African Union (AU) Agenda 2063 development indicators.

To (1) minimise the burden of reporting on the plethora of national, continental, and global development agendas, and to (2) quantify the demand for statistical information, Stats SA compiled a comprehensive set of development indicators. The comprehensive set of development indicators is known as the Integrated Indicator Framework (IIF)

and – among others – assists the country to report on the SDGs. The approach further minimises duplication of reporting and mitigates the existence of contradictory statistical estimates in the public domain.
