

BRICS

Joint Statistical Publication

2013

Brazil . Russia . India . China . South Africa

FOREWORD

BRICS as it is known globally, is a group of leading emerging economies playing a key role in the world development platforms. It consists of Brazil, Russia, India, China and South Africa. The Group has received overwhelming global attention since its inception in 2009 and it has been playing a critical role across the globe. This statistical report is the fourth joint statistical publication by the National Statistics Offices of the BRICS Group. The publication is one of the many channels to disseminate statistical data about the member countries and it is aimed at harmonizing BRICS statistical information.

South Africa is the host nation of the Fifth Summit of the BRICS Countries in 2013; hence Statistics South Africa has assumed the role of compiling, printing and distribution of this fourth statistical report.

A meeting of technical experts was held in South Africa from 4 to 7 February 2013 with statisticians coming from BRICS countries and maintained close communication.

Contents

Foreword

Chapter One: Economic and Social Indicators Comparison of BRICS Countries

Table 1	Economic and Social Indicators Comparison of BRICS Countries	1
---------	--------------------------------------------------------------------	---

Chapter Two: General Information

Table 2.1	General Information on BRICS Countries (2011)	9
Table 2.2.1	World Heritage Sites and Major Landmark of Brazil	10
Table 2.2.3	World Heritage Sites and Major Landmark of India	11
Table 2.2.4	World Heritage Sites and Major Landmark of China	12
Table 2.2.5	World Heritage Sites and Major Landmark of South Africa	13
	Explanatory Notes	14

Chapter Three: Population

Table 3.1	Summary of Population	17
Table 3.2.1	Selected Data on Population – Brazil	19
Table 3.2.2	Selected Data on Population– Russia	20
Table 3.2.3	Selected Data on Population – India	21
Table 3.2.4	Selected Data on Population – China	22
Table 3.2.5	Selected Data on Population – South Africa	23
	Explanatory Notes	24
Graph 3.2(a)	Natural Increase Rate of Population	25
Graph 3.2(b)	Infant Mortality Rate	26

Chapter Four: Economically Active Population

Table 4.1	Summary of Economically Active Population	29
Table 4.2.1	Selected Data on Economically Active Population – Brazil	30
Table 4.2.2	Selected Data on Economically Active Population – Russia	31
Table 4.2.3	Selected Data on Economically Active Population – India	32
Table 4.2.4	Selected Data on Economically Active Population – China	33
Table 4.2.5	Selected Data on Economically Active Population – South Africa	34
	Explanatory Notes	35

Chapter Five: National Accounts

Table 5.1	Summary of National Accounts	39
Table 5.2.1	Selected Data on National Accounts – Brazil	41
Table 5.2.2	Selected Data on National Accounts – Russia	42
Table 5.2.3	Selected Data on National Accounts – India	43
Table 5.2.4	Selected Data on National Accounts – China	44

Footnotes:

(P) Preliminary data

1 Unemployment Rate in Urban Area

2 The data of India are by fiscal years which are from April 1 of the current year through March 31 of the next year. Includes all type of iron ore.

Monthly per capita consumer expenditure based on "last 365 days" reference period.

3 In million tonnes of standard fuel (we mean under the standard fuel the natural fuels-oil, coal, gas, product etc. Which are recalculated for their own corresponding caloric coal equivalent)

4 Gini is computed based on expenditure per capita excluding taxes.

Specific Footnotes and Sources of data may be seen from the respective Chapters of the Indicators.

- 1 Population data for Brazil relates to Year 2012. Data derived from Adjusted Population Projection of Brazil by Sex and Age for the Period 1980-2050 – Review 2008, using the structures of the National Household Sample Survey for the period 2001-2009. Population data for Russia, China AND South Africa relates to Year 2010

Russia

* 2012 year.

India

- 2 Based on Census 2011 as on 1st March

China

- 3 Data of 2012. Data for mid-year population and population density of China in 2012 are estimated data.

Table 2.2.1: World Heritage Sites and major Landmark of Brazil

World Heritage Sites	Major Landmarks
1. Historic Town of Ouro Preto	1. Corcovado (Christ the Redeemer)
2. Historic Centre of the Town of Olinda	2. Sugarloaf Mountain (Pão de Açúcar)
3. Jesuit Missions of the Guaranis: Ruins of Sao Miguel das Missoes (Brazil)	3. Copacabana Beach
4. Iguazu National Park	4. Iguazu Falls
5. Brasilia	5. Pantanal Conservation Area

Table 2.2.3: World Heritage Sites and major Landmark of India

World Heritage Sites	Major Landmarks
1. TajMahal	1. The Golden Temple
2. QutbMinar	2. Sun Temple
3. Buddhist Monuments at Sanchi	3. HawaMahal
4. Group of Monuments Mahabalipuram	4. Ajanta caves
5. Group of Monuments at Pattadakal	5. Lotus Temple

Table 2.2.4: World Heritage Sites and major Landmark of China

World Heritage Sites	Major Landmarks
1. The Great Wall	1. Tian An Men Rostrum
2. Imperial Palaces of the Ming and Qing Dynasties in Beijing and Shenyang	2. The Altar of Prayer for Good Harvests of the Temple of Heaven
3. Mogao Caves	3. The Potala Palace in Lhasa
4. Mausoleum of the First Qin Emperor	4. The Badaling Great Wall
5. Summer Palace, an Imperial Garden in Beijing	5. Monument for Liberation in Chongqing

Table 2.2.5: World Heritage Sites and major Landmark of South Africa

World Heritage Sites	Major Landmarks
Fossil Hominid Sites of Sterkfontein	Table Mountain
iSimangaliso Wetland Park	Drakensberg Mountains
Robben Island	Union Buildings
Umkhahlamba/Drakensberg Park	
Mapungubwe Cultural Landscape	
Cape Floral Region Protected Areas	
Vredefort Dome	
Richtersveldt Cultural and Botanical Landscape

Explanatory Notes:

General

In 1972, the General of UNESCO adopted a resolution with overwhelming enthusiasm creating thereby a 'Convention concerning the protection of the World Cultural and Natural Heritage'. The main objective were to define the World Heritage in both cultural and natural aspects: to enlist Sites and Monuments from the member countries which are of exceptional interest and universal value, the protection of which is the concern of all mankind; and to promote co-operation among all National and people to contribute for the protection of these universal treasures intact for future generations.

The list of recorded sites on the World Heritage now stands at 812 which include both cultural and natural wonders, and endowment that is shared by all mankind and the protection of which is the concern of the entire mankind .These include 628 cultural, 160 natural, 24 mixed properties in 137 state parties.

India is an active member State on the World Heritage from 1977 and has been working in close co-operation with other International agencies like ICOMOS (International Council on Monuments and Sites), IUCN (International Union for the Conservation of Nature and Natural Resources) and ICCROM (International Centre for the study of Preservation of Cultural Property).

India

There are 27 Heritage Properties in India out of which 22 are Cultural Properties and are National Properties.

Footnotes:**Brazil**

- 1 Data derived from Adjusted Population Projection of Brazil by Sex and Age for the Period 1980-2050 – Review 2008, using the structures of the National Household Sample Survey for the period 2001-2009. In the years 2001, 2002 and 2003 the rural area in the North Region of Brazil were not surveyed. For the years 2000 and 2010 the urban-rural structures were given by the own Censuses.
- 2 2000 Brazilian Demographic Census. Resident population on August 1st.
- 3 2010 Brazilian Demographic Censuses. Resident population on August 1st. Result released on November 29th, 2010. For the years 2001 to 2009 it was fitted a logistic function to the corresponding ratios between enumerated in 2000 and 2010 censuses and projected populations to the same years.

India

- 4 Information from 2001 to 2011 is based on Census as on 1st March while information 2002-2010 is based on Population Projections.

China**(p) Provisional data**

- 5 Data in 2000 and 2010 are estimated from the fifth and sixth National Population Census respectively. Data in 2005 are estimated from the National 1% Population Sample Survey. The other data are estimated from the annual national survey on population changes.
- 6 Year-end population.

South Africa

- 7 Population estimation series not active in 2000. Population figures cannot be verified. Population estimation series does not split population into rural/urban.

Explanatory Notes:

General Notes

- 1 Crude Birth rate: Number of Births per 1000 population in a given year. This definition excludes foetal deaths
- 2 Crude Death Rate: Number of Deaths per 1000 population in a given year.
- 3 Natural Increase In Population = Crude Birth Rate –Crude Death Rate
- 4 Total Fertility Rate (TFR): Average number of children that would be born to a woman if she experience the current fertility pattern throughout her reproductive span (15-49 year).
- 5 Expectation of live at birth: Average number of years' a new born child is expected to live undercurrent mortality conditions.
- 6 Infant Mortality Rate (IMR): Number of infants dying under one year of age in a year per 1000 live births of the same year.
- 7 Crude Divorce Rate refers to ratio of divorce couples to the annual average population for the reference year, the formula is:
$$\text{Crude divorce rate} = \frac{\text{Number of couples divorced for the reference year}}{\text{Annual Average population}} \times 1000\%$$
- 8 Dependency rate – number of people aged 0-15 and 60 and over to the population 15-59.
- 9 Census: A canvass of a given area, resulting in an enumeration of the entire population and often the compilation of other demographic, social and economic information pertaining to that population at a specific time.

Russia: The estimation of population size with account to the 2010 all-Russian population census results. Data for 2003-2010 will be revised due regard to the results of all-Russian population census 2010 in 2012.

Graph 3.1(a) Natural Increase Rate of Population

Crude Birth Rate: Number of Births per 1000 population in a given year.
Crude Death Rate: Number of Deaths per 1000 population in a given year.
Natural Increase Rate of Population = Crude Birth Rate – Crude Death rate.

Labour Force Survey (P0210) and Quarterly Labour Force Survey (P0211)

Footnote:

1 2000 data are for the September wave only (not annual figures) since the March wave was a pilot.

Explanatory Notes

General notes

- 1 Economically Active Population (Labour Force): Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. This is for a particular reference period.
- 2 Unemployment Rate (UR): UR is defined as the number of persons unemployed per 1000 in the labour force (which includes both employed and unemployed)
- 3 Workers (or employed): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reasons of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non farm activities were also considered as workers.
- 4 Activity status, Labour Force, Employment, Unemployment: It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during reference period:
 - (i) Working or being engaged in economic activity (work)
 - (ii) Being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and
 - (iii) Being not engaged in any economic activity (work) and also not available for (work)

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employed' and 'unemployed' respectively.

Brazil

Reference Week is the last complete week of September each year.

Work

It was considered as work in the exercise of economic activity:

- a) Occupation paid in cash, products, goods or benefits (housing, food, clothes etc) in the production of goods and services:
- b) Occupation paid in cash or benefits (housing, food, clothes etc) in domestic services.
- c) Occupation without pay in the production of goods and services, performed at least one hour per week
 - Helping a member of the household who had work as: employee in the production of primary goods (which includes the activities of agriculture, forestry, livestock, vegetable or mineral extraction, hunting, fishing and fish farming): or own account or employer in any activity.
 - Helping in a religious, charitable or cooperative institute or
 - As apprentice or trainee, or
- d) Occupation developed for at least one hour per week:
 - In the production of goods, of the branch that includes the activities of agriculture, forestry, livestock, vegetal extraction, fishing and fish farming, for own consumption or for at least one member of household consumption, or
 - Construction of buildings, private roads, wells and other improvements (except only repairs work) for their own use or for the use of at least one member of the household.

Employed Person who performed some work during all or part of the reference week. It is also included as employed persons who have not exercised their paid work during the reference week due to vacation, leave, strike etc.

Unemployed Person without work which had taken specific action to seek work (getting in touch with employers; enrolling or going in for official examination for a government job; registration at employment agency, union or similar body, placing or answering job advertisement; seeking assistance of relative, friend or colleague; taking an action to start business; etc.) in the reference week.

India

The National sample Survey office carries out survey on the subject of employment and labour force characteristics at the National and State levels.

Reference Period: July 2004-June 2005, July 2005-June 2006, July 2007-June 2008, July 2009-June 2010

1. Seeking or available for work (or unemployed): Person, who owing to lack of work, had not worked but either sought work through employment exchanges, interme diaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' (or unemployed)
2. Activity status, Labour Force, Employment, Unemployment: It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period

Usual Subsidiary Economic Activity Status A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of the survey of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic was pursued was the subsidiary economic activity status of that person.

Usual Activity Status Considering Principal and Subsidiary Status Taken Together The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as a worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

PS: Principal Status **SS:** Subsidiary Status

China

Employed Persons refer to persons aged 16 and over who are engaged in gainful employment and thus receive remuneration payment or earn business income. This indicator reflects the actual utilization of total labour force during a certain period of time and is often used for the research on China's economic situation and national power.

Registered Unemployed Person in Urban Areas refer to the persons with non-agricultural household registration at certain working ages (16 year old to retirement age), who are capable of working, unemployed and willing to work, and have been registered at the local employment service agencies to apply for a job.

Registered Unemployment Rate in Urban Area refers to the ratio of number of the registered unemployed persons to the sum of the number of persons employed in various units (minus the employed rural labour force, re-employed retirees, and Hong Kong, Macao, Taiwan or Foreign employees), laid-off staff and workers in urban units, owners of private enterprises in urban areas, employees of private enterprises in urban areas, employees of self-employed individuals in urban areas, and the registered unemployed persons in urban areas.

The annual average exchange rates used are available in Tables 14.2.1 and 15.1.

- 1 Data for 2010, 2011 and 2012 are derived from quarterly GDP results.
- 2 Data of 2010, 2011 and 2012 are preliminary estimation.

India

- 3 Data are by fiscal year which is from April 1 of the current year through March 31 of the next year. GDP is at Factor Cost at current price. GDP and per capita GDP (US\$) are converted using the annual average exchange rate.
- 4 Data for the year 2000-2001 to 2003-2004 relate to old base year 1999-2000 prices
- 5 Data for the year 2004-2005 and onwards relate to new base year 2004-2005 prices.

China

- 6 GDP and per Capita GDP in US dollars are converted using the annual average exchange rates
- 7 GDP is calculated at producer's price.
- 8 Data of 2012 are preliminary estimation.

Explanatory Notes:

General

National product by definition is a measure in monetary terms of the volume of all goods and services produced by an economy during a given period of time, accounted without duplication. The measure obviously has to be in value terms as the different units of production and different measures of services are not directly added. In the case of a closed economy the measure amounts to domestic product. (Gross Domestic Product)

Gross National Income (GNI)

The economy of India is not closed as there are transactions with rest of the world in the form of exports, imports, loans etc. This gives rise to the concept of national or domestic. Gross Domestic Product refers to production of all resident units within the borders of a country, which is not exactly same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad. Conversely, some production taking place within a country may be attributed to temporary and seasonal foreign labour.

$GNI = GDP + \text{compensation of employees and property income receivable from the rest of the world} - \text{compensation of employees and property income payable to the rest of the world}$

The household consumption expenditure referred to as private final consumption expenditure (PFCE) in National Accounts Statistics (NAS), consists of expenditure by households (including non-profit institutions) on non-durable consumer goods and services and all durable goods except land and buildings.

Government final consumption expenditure

Government final consumption expenditure comprises the compensation of employees and purchases of goods and services by the government including purchases abroad. Compensation of employees of general government consists of wages and salaries and social security contribution.

Primary Industry Agriculture, Forestry, Animal Husbandry and Fishery and Mining.

Secondary Industry Manufacturing, Electricity, gas and water and Construction.

Tertiary Industry The other industries of national economy.

Russia

Gross Domestic Product (GDP) at market prices is the final result of the production activity of all producer units within a country area. It may be estimated using three methods: production, use of incomes (or expenditure method) and GDP formation by income sources. GDP, measured by production method, is defined as a difference between total output of goods and services for the whole economy, on the one hand, and intermediate consumption, on the other, or otherwise as a sum of value added in the sectors of the economy. GDP, measured by the method of use of incomes, represents a sum of expenditures of all the institutional units – residents for final consumption, gross capital formation and net exports. GDP calculated on the basis of income sources reflects primary incomes accumulated in the process of production by all institutional units grouped by sectors of the economy.

Gross Capital Formation indicates net acquisition by resident units of goods and services produced in the current period or imported, but not consumed in that period. Gross capital formation includes gross fixed capital formation, changes in inventories, as well as net acquisition of valuables.

Net Exports of Goods and Services are calculated as a difference between exports and imports and include trade turnover of Russia with foreign countries.

China

Gross Domestic Product (GDP) refers to the final products at market prices produced by all resident units in a country (or a region) during a certain period of time. In the practice of national accounting, GDP is calculated from three approaches, namely production approach, income approach and expenditure approach, which reflect GDP and its composition from different angles.

Three Strata of Industry in China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery and services in support of these industries. Secondary industry refers to mining and quarrying, manufacturing, production and supply of electricity, water and gas, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

Indices of GDP measure the change of GDP at constant prices. GDP at constant prices converts GDP based on the current price into a value based on the price of the base period. When adjusted for price changes, the values of two different periods can be compared to reflect changes of both products and production activities.

GDP by Expenditure Approach refers to the method of measuring the final results of production activities of a country (region) during a given period from the perspective of final uses. It includes final consumption expenditure, gross capital formation and net export of goods and services. The formula for computation is:

$GDP \text{ by expenditure approach} = \text{final consumption expenditure} + \text{gross capital formation} + \text{net export of goods and services}$

Gross Fixed Capital Formation refers to the value of acquisitions less those disposals of fixed assets during a given period. Fixed

assets are the assets produced through production activities with unit value above a specified amount and which could be used for over one year. Natural assets are not included. Gross fixed capital formation can be categorized into total tangible fixed capital formation and total intangible fixed capital formation. Total tangible fixed capital formation includes the value of the construction projects and installation projects completed and the equipment, apparatus and instruments purchased (less those disposed) as well as the value of land improved, the value of draught animals, breeding stock and animals for milk, for wool and for recreational purposes and the newly increased forest with economic value. Total intangible fixed capital formation includes the prospecting of minerals and the acquisition of computer software minus the disposal of them.

Final Consumption Expenditure refers to the total expenditure of resident units for purchases of goods and services from both the domestic economic territory and abroad to meet the needs of material, cultural and spiritual life. It does not include the expenditure of non-resident units on consumption in the economic territory of the country. The final consumption expenditure is broken down into household consumption expenditure and government consumption expenditure.

Net Export of Goods and Services refers to the exports of goods and services subtracting the imports of goods and services. Exports include the value of various goods and services sold or gratuitously transferred by resident units to non-resident units. Imports include the value of various goods and services purchased or gratuitously acquired resident units from non-resident units. Because the provision of services and the use of them happen simultaneously, the acquisition of services by resident units from abroad is usually treated as import while the acquisition of services by non-resident units in this country is usually treated as export. The exports and imports of goods are calculated at FOB.

Changes in Inventories refer to the market value of the change in the physical volume of inventory of resident units during a given period, i.e. the difference between the values at the beginning and at the end of the period minus the gains due to the change in prices. The changes in inventories can have a positive or a negative value. A positive value indicates an increase in inventory while a negative value indicates a decrease in inventory. The inventory includes raw materials, fuels and reserve materials purchased by the production units as well as the inventory of finished products, semi-finished products and work-in-progress.

Final Consumption Rate refers to final consumption expenditures as percentage of gross domestic product by expenditure approach.

Gross Capital Formation Rate refers to gross capital formation as percentage of gross domestic product by expenditure approach.

- 7 Included under electricity and other fuels.

Explanatory Notes:

General

The retail price is defined as money cost to the consumer of a specified unit of sale which is inclusive of all rebates, discount etc.

Consumer Price Indices (CPI), the retail price indicates time fluctuations of prices on goods and services purchased by the consumers for non production consumption within a specified period of time. It measures a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing price changes in retail trade and service establishments and also in commodity, mixed and food market and as well as on data of actual structure of consumer expenditures of households for the previous year.

Producer Price Indices: It represent bulk transaction generally at the early stage of trading. The price pertaining to bulk transactions may have divergent nomenclatures e.g. farm harvest prices, wholesale prices, procurement prices, support prices, administered prices, import prices, forward prices etc. Wholesale price index relates to the transactions at the primary stage which broadly correspond to producer prices.

Brazil

The Brazilian Institute of Geography and Statistics (IBGE) is the government organisation responsible for the computation of the Extended National Consumer Price Index (IPCA), which is the official and main inflation indicator of the country. IPCA is used by the Central Bank of Brazil in order to monitor objectives set in the inflation goals system. It is released every month and refers to families in the urban localities of the areas, with monthly income, from any source, ranging from 1 (one) to 40 (forty) minimum salaries. The geography coverage of the index involves the biggest 11 areas of the country, which represent 32% of the Brazilian urban population.

Russia

CPI is computed for the urban population and it is diffused for the whole population.

Producer Price Indices (PPI) for Industrial Goods are compiled on the basis of recording prices for representative goods produced by 8 thousand basic (key) organisations covered by the survey. Average prices and price indices are calculated for more than 800 (since 2010 year-1000) representative goods. Producer prices are actual prices for produced goods provided for selling on the domestic market (except indirect taxes). PPI calculated for representative goods shall be gradually aggregated into indices of corresponding types, kinds, classes, divisions of economics activities. Data on the volume of production in value terms of the base period are being used as the weight factors.

India

Consumer Price Index Numbers for Industrial workers measure a change over time in prices of fixed basket of goods and services consumed by Industrial Workers. These index numbers are utilized for regulation of wages and dearness allowances of millions of employees and workers in the organised sector. It also serves as an indicator of retail prices in the country and is used for measuring inflation rates, formulation of wages and interest policies. The Labour Bureau, an attached office of the M/o Labour & Employment, has been compiling and disseminating Consumer Price Index for industrial worker since its inception in the year 1946.

This index series till 2005 was based on 1982=100. A new series on base: 2001=100 has been released w.e.f January, 2006 in respect of 78 important centres in which workers belonging to 7 sectors viz. Factories, Mines, Plantations, Railways, Public Motor Transport Undertaking, Electricity Generating and Distributing Establishments and Ports & Docks. The data on Consumer Expenditure have been obtained from an ad-hoc survey "family Income and Expenditure Survey" conducted during September 1999 to August 2000 in respect of 78 selected centers by the NSSO on behalf of Labour Bureau. The survey was conducted over a period of 12 months in each selected centre. These 78 centres were selected on the basis of their industrial importance in the country and distributed among different states in proportion to the Industrial employment in the State subject to a maximum allotment of 5 centres per state per sector. On the basis of the results thrown up by the survey, the weighing diagrams have been derived in respect of 78 constituent's centres All-India. The indices are compiled by using price data collected on monthly basis and house rent survey data on half yearly basis. The CPI (IW), numbers at centre and all India levels are released every month (the last working day of the following months).

Producer Price: The present data pertains to the Index Number of Wholesale Prices in India with base 1993=94=100. This series was introduced with effect from 1st April, 2000. The WPI commodity basket has three constituent commodity groups (a) primary articles, (b) fuel, power, light, and lubricants and (c) manufactured products, with respective weights of 22.02 percent, 14.23 percent and 63.75 percent. The (1993-94) series has 435 items for which there are 1918 quotations. All items having large transactions in the economy have been included in this series to extent feasible.

The existing series is based on ex-factory/ex-mine prices in respect of the manufactured items. In the case Agricultural commodities, however the prices as quoted in primary wholesale markets are used. The collection of price data is mostly through correspondence.

Some of the important sources for collection of price data are follows.

- (i) Directorate of Economics and Statistics, Ministry of Agriculture
- (ii) Agricultural marketing Departments of central and State Governments
- (iii) State Directorates of Economics and Statistics
- (iv) District Statistical Offices
- (v) Registrar of Cooperative Societies and other primary agencies to the State Government
- (vi) The non-official sources are the various Chambers of Commerce Trade Associations, leading manufacturers and business houses.

Index is compiled on the principle of weighted arithmetic mean according to the Laspeyre's formula, which has fixed base year weights operating through the entire life span of the series.

China

Consumer Price Indices reflect the trend and degree of changes in prices of consumer goods and services purchased by urban and rural households during a given period. They are obtained by combining consumer price indices of urban households and consumer price indices of rural household. The indices enable the observation and analysis of the degree of impact of the changes in the prices of retailed goods and services on the actual living expenses of urban and rural residents.

Producer Price Indices of Industrial Goods reflect the trend and degree of changes in general exfactory prices of all industrial goods during a given period, including sales of industrial goods by an industrial enterprise to all units outside the enterprise, as well as sales of consumer goods to residents. It can be used to analyze the impact of ex-factory prices on gross output value and value-added of the industrial sector.

Footnotes:**Brazil**

- 1 Excluding the information of the rural areas of the State of Rondonia, Acre, Amazonas, Roraima, Pará and Amapá.
- 2 The data for Brazil refer to vehicles per 100 persons.
- 3 Excluding rural population of the states of Rondônia, Acre, Amazonas, Roraima, Pará and Amapá.

Russia

- 3 All type TV Sets. Per 100 households.
- 4 Personal Passenger cars.
- 5 Estimates on the base of the data of the Federal Treasury. Since 2005 year including budgets of the state non-budget funds. Before 2011 year data on public expenditure on health include expenditure on physical culture and sport

India

- 6 Data are by fiscal year which is from April 1 of current year through March 31 of the next year.

China

- 7 Average annual wage of staff and workers refers to the average wage level in monetary terms per staff and worker during a year of time.
- 8 Government appropriation for education to GDP.
- 9 In rural household survey of China, cars refer to the living use, including vans.
- 10 Total Expenditure on health as percentage of GDP.
- 11 Gini coefficient based on per capita annual disposable income.

South Africa

- 10 Refer to proportion of households that owns a television set, regardless of display type.
- 12 GINI is per capita expenditure excluding taxes.

Footnotes:

- Fully or partially owned.
- Piped or tap water in the house or yard, for total population, not only cities.
- 1-4 rooms. Note: although data is available for 2002 to 2008, the question by which information regarding the number of rooms is gathered changed in 2009, making comparison unwise.
- Individuals over the age of 20 years who have not completed primary education (equivalent to grade 7 education)
- Excludes rental estimations for owner occupied dwelling units.
- Adjusted for CPI
- Per 1000 Uninsured population.

Explanatory Notes:

Brazil

Wage it was considered the monthly wage usually received in the reference month (September of each year)

- a) **Employees** the wage the gross monthly income that would normally be entitled to work the whole month. When the income was variable, the average monthly income for the month of reference of the survey year. It were not included 13th (14th and 15th etc.) and profit-sharing paid by the enterprise to their employees. Also the amount received in benefits (housing, food, clothing, transport, meal or food stamps etc.) was not included in the calculation of the income of the employees.
- b) **Employers and own account:** the wage was the withdrawal usually made monthly or, where the gains was variable, the average monthly withdrawal for the month of reference year. The withdrawal was the gain (gross income less expense incurred with the project, such as paying employees, raw materials, raw material, electricity, telephones etc.). It was not included the value of the production of the production for own consumption.

Russia

Growth Rate of Real Wages relative indicator is calculated by dividing the indices of accrued wage by consumer price indices for respective period of time. Average nominal accrued wage are compiled by dividing accrued wages fund of employees by average annual payroll number of employees. The accrued wages fund of employees includes sums of payments added to employed in the monetary and not monetary forms for fulfilled and unfinished time, the compensatory payments connected with working conditions, surcharges and extra charges, bonuses, occasional incentive payments and also payments of meal and residing, having regular character. Benefits granted to the employees from the state social extra-budget funds are not included in the wages fund.

Number of Physicians includes all medical doctors with the higher medical education engaged in the treatment and sanitary organisations, social security institutions, research institute, personnel training institutions, in the public health management bodies and orders

Hospital Beds are the beds equipped with the required appliances and ready to receive patients.

Area of Parks and Green Land includes area of the common using green plantations (parks, gardens, squares and parkways) forest parks and city gardens.

Gini Index characterizes the level of deviation of the actual distribution of the income of population from the line of the even distribution.

China

Government Appropriation for Education refers to state budgetary fund for education, taxes and fees collected by governments at all levels that are used for education purpose, education fund for enterprise- run schools, income from school –run enterprise, work-study programme and social services that are used for educational purpose.

Percentage of Urban Population with access to gas refers to the ratio of the urban population with access to gas to the total urban population at the end of the reference period.

Urban Green Areas per Capita refers to the ratio of the urban green area to the total urban population.

Area of Urban Green Areas refers to the total area occupied for green projects at the end of the reference period, including park green land, protection green land, green land attached to institutions and other green land.

Regular Institutions of Higher Education refer to educational establishments set up according to the government evaluation and approval procedures, recruiting graduates from senior secondary schools as the main target by National Matriculation TEST. They include full-time universities, colleges, institutions of higher professional education, institutions of vocational education, institutions of higher vocational education and other (non-university tertiary, branch schools and undergraduate classes), including total enrolment in full undergraduate courses and in specialized courses.

Regular Secondary Schools are classified into regular senior secondary schools and junior secondary school, including: Regular Senior Secondary School referring to education establishment providing senior secondary education service to graduates of junior secondary school; regular Junior Secondary School referring to education establishment providing fundamental secondary education service to graduates of primary school.

Vocational Secondary School include vocational junior secondary school and vocational senior secondary school, referring to education establishment ratified by education authority at county level or above to enrol graduates of primary school and junior secondary school and provide junior or senior vocational education service.

Primary Schools refer to education establishments ratified by education authority at county level or above to the children of school age and provide primary education services.

Special Schools refer to regular or vocational primary or secondary education institution enrolling children with physical or intellectual; disabilities and other special children and teenagers that have demand for special education

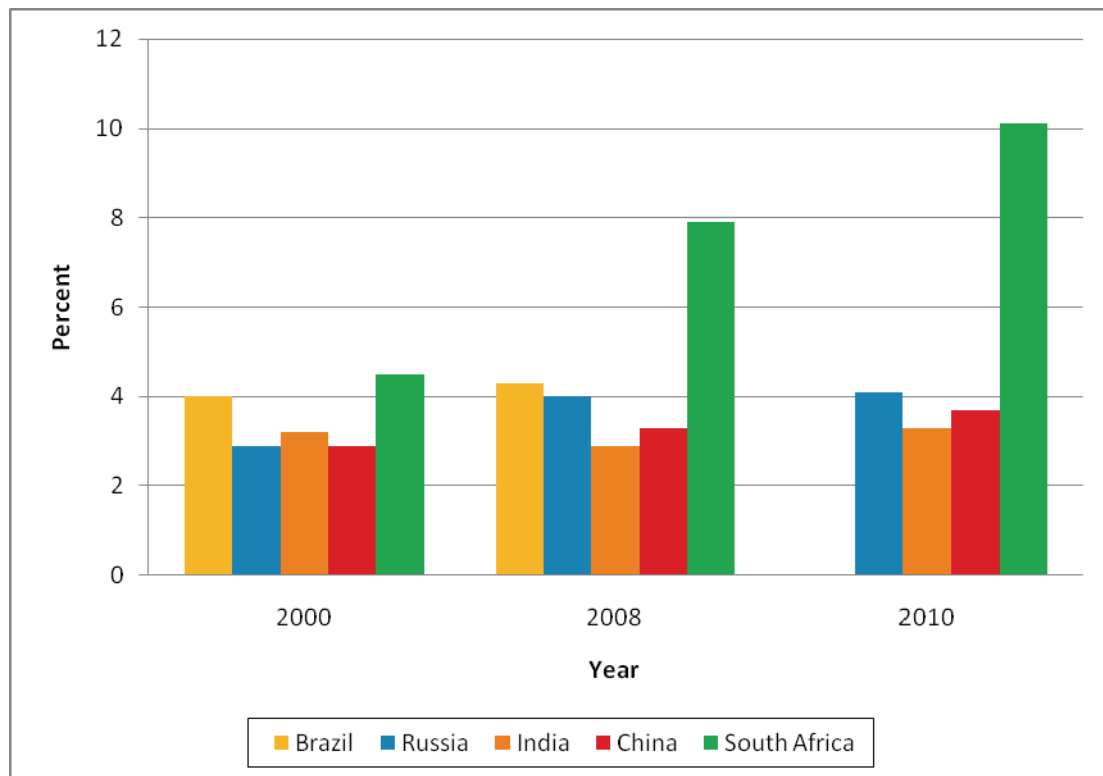

Preprimary Education Institution includes kindergarten and preschool class. Kindergarten enrolls three year old (and above) preschool children and provides care and education service. Establishment of kindergarten shall be approved by education at county level or town government, and shall be registered in file. In those regions without the resources of providing three year preschool education to preschool children, one year preschool class can be set up to provide one year preschool education service to preschool children.

Physicians refer to licenced (assistant) Doctors. Licenced assistant doctors refer to the medical workers who have obtained the licence of qualified (assistant) doctors and are employed in medical treatment, disease prevention or healthcare institutions, excluding the licensed (assistant) doctors engaged in management job. The classification of licensed (assistant) engaged in management job .The classification of licensed (assistant) doctors is clinician, Chinese medicine, dentist and public health.

Number of licensed (assistant) Doctors per 1000 population the formula is: Number of licensed (assistant) Doctors per 1000 population = (Number of licensed Doctors+Number of licenced Assistant Doctors)/population *1000. The population is the figure of household registration from the Ministry of Public Security.

Number of Beds of Hospitals and Health care per 1000 Population = (Number of beds of hospitals + Number of beds Health Care)/population *1000. The population is the figure of household registration from the Ministry of Public Security

Explanatory Notes:

China

Total Water Resources refer to total volume of water resources measured as run-off for surface water from rainfall and recharge for groundwater in a given area, excluding transit water.

Natural Reserves refer to certain areas of land, water or sea that are representative in natural ecological systems, or are natural habitats for rare or endangered wild animals or plants, or water conservation zones, or the location of important natural or historic.

Relics, which are demarked by law and put under special protection and management. Natural reserves are designated by the formal approval of government and above country level. Scenic spots and cultural preservation zones are not included.

Investment in the Treatment of Environment Pollution refers to the proportion of investment in fixed assets in the total investment in harnessing industrial pollution and in construction of urban environment infrastructural facilities. It includes investment in harnessing sources of industrial pollution, investment in the environment protection facilities designed concurrently with construction. Projects and investment in urban environment infrastructure facilities.

Russia

Freshwater Resources include internal renewable freshwater resources (river flows and groundwater from rainfall in the country).

Annual Fresher Water Withdrawals are water withdrawals, not counting losses from storage basins.

Statistics South Africa, 2012

Explanatory Notes:

India

Index of Industrial Production is a simple weighted arithmetic mean of production relatives, the weights being proportional to gross value of output as available from ASI factory sector. At the industry indicator levels, the weights were allocated in proportion to their gross value of output.

The new series of All India Index of Industrial Production (IIP) with base 2004-05 has a broader coverage of 682 items (clubbed in 399 item groups: Mining-1, Manufacturing – 397, Electricity – 1) comprising 61 from Mining & Quarrying, 620 from Manufacturing and 1 from Electricity Sector having the weight age of 14.16%, 75.53% and 10.32% respectively in the all-India IIP. National Industrial Classification (NIC)-2004 is being followed.

China

Industrial Production Index in China refer to the indices of the PPI-deflated value added of industry (% to the previous year) covering industrial enterprises above the designated size (industrial enterprises with annual revenue from principal business over 5 million yuan prior to 2011).

Production of Fertilizers is calculated on the basis of 100% effective content.

Sawnwood refers to manufactured woods using wood sawing machine or manual tools to process log into formation of wood of certain width and thickness of sectional dimensions along longitudinal direction.

Footnote:

1 Nuclear figure is equivalent to electricity produced from nuclear plants

Explanatory Notes:

China

Total Primary Energy Production refers to the total production of primary energy by all energy producing enterprises in the country in a given period of time. It is a comprehensive indicator to show the level, scale, composition and pace of development of energy production of the country. The production primary energy includes that of coal, crude oil, natural gas, hydro-power and electricity generated by nuclear energy and other means such as wind power and geothermal power. However, it does not include the production of fuels of low calorific value, bio-energy, solar energy and secondary energy converted from primary energy.

Total Consumption of Energy refers to the total consumption of energy of various kinds by the production sectors and the households in the country in a given period of time. It is a comprehensive indicator to show the scale, composition and pace of increase of energy consumption. Total energy consumption includes that of coal, crude oil and their products, natural gas and electricity. However, it does not include the consumption of fuel of low calorific value, bio-energy and solar energy. Total energy consumption can be divided into three parts: end use energy consumption; loss during the process of energy conversion; and energy loss.

Footnotes:

- 1 Data of indices of agricultural gross output are provisional for 2012 and prior to 2003; data are calculated at 1990 prices. The new classification for national standard of industry classification has been implemented since 2003 and the gross output value includes the service in support of agriculture, forestry, animal husbandry and fishery.
- 2 Ownership of tractor and harvester-thresher in agriculture at year-end includes large, medium and small-sized tractors; harvesters and threshers are not involved.

Footnote:

- 1 Data on commercial agriculture

Explanatory Notes:

General:

Cultivated Area: This Consists of net area sown and current fallows.

Average Yield of Crops: Average yields per hectare of principal crops have been obtained by dividing the total production by the corresponding total area under each crop.

China: Indices of agricultural gross output: The development rates of agricultural gross output value deflated by using producers prices indices.

- c) Transnet, 2010

Footnotes:

- 1 Passenger Rail Agency of South Africa.
- 2 Transit Pipelines.
- 3 These figures cover Metro rail only.
- 4 The Land Transport Survey is a monthly survey which covers passenger and freight transportation by rail and road in South Africa.

This survey is based on a sample drawn from the 2010 Business Sampling Frame (BSF) that contains businesses registered for value-added tax. This survey has replaced the Land Freight Survey which was discontinued in 2003, and was re-engineered from 2008.

- 5 The data for 2010 are preliminary.

Explanatory Notes:

Russia

Public Roads refer to the federal roads of federal property; regional and inter municipal roads of the property of constituent entities of the Russian Federation; local roads of the property municipalities as well as of property of settlements, municipal and city districts.

China

Length of Railways in Operation refers to the total length of the trunk line for passenger and freight transportation (including both full operation and temporary operation).

Length of Highways refers to the length of highways which are built in conformity with the grades specified by the highway engineering standard [Highways WTBZ-Technical Standard JTJ01-88] formulated by the Ministry of Transport, and have been formally checked and accepted by the departments of highways and put into use.

Length of Petroleum Pipelines refers to the actual transport distance of oil (or gas) products, which is in general calculated according to the length of single pipeline.

Freight Traffic (Passenger-traffic) refers to the sum of the product of the volume of transported cargo (passengers) multiplied by the transport distance.

Freight Traffic of Petroleum Pipelines refers to the total amount of oil (or gas) transported through petroleum pipelines.

Length of Domestic Regular Civil Aviation Routes refers to the total length of all domestic civil aviation routes during statistical periods.

Number of Regular Civil Aviation Airports Opened refers to the total number of areas assigned for civil aviation flights to do take-off, landing, taxiing, parking and other actions.

Ownership of Automobiles refers to the total number of vehicles that are registered and received vehicles license tags according to the Work Standard for Motor Vehicles Registration formulated by the Transport Management Office under the department of public security at the end of the reference period.

South Africa**Household based question**

- 11 Does the household have access to a telephone line in the dwelling or household?
- 12 Does the household have access to a cell phone in the dwelling or household?
- 13 Does the household have access to a computer in the dwelling or household? Question was only asked once, in 2005
- 14 Does the household have access to an internet connection in the dwelling or household? Question was asked in 2005, and then again in 2009, 2010.
- 15 Not access to outside sources, just whether they have access in the household.

Explanatory Notes:

China

Main Telephone Line refers to a main line which is a (fixed) telephone line connecting the subscriber's terminal equipment to the public switched network and which has a dedicated port in the telephone exchange equipment. The number of ISDN channels should be included. PHS subscribers should also be included.

Subscribers of Cellular Mobile Telephone refer to number of portable telephone users subscribing to a public mobile telephone service and have access to Public Switched Telephone Network (PSTN) using cellular technology. This includes analogue and digital cellular systems.

Data on Internet User refer to the estimated number of inhabitants aged 6 or above, and have connected with Internet at least once in the last 6 months.

Number of Daily Newspaper includes all kinds of newspaper, referring to those with CSSN (China standard Serial number).

- 2 Nominal result
- 3 Total tax revenue corresponds to the fiscal load.
- 4 The annual average exchange rates used is available in Tables 14.2.1 and 15.1

Russia

- 5 The calculation carried out on the basis of data of the Federal Treasury, 2012 - according to preliminary data.
- 6 The calculation according to the data of Bank of Russia.

India

- 7 Data is for fiscal year which is from April 1 of the year through March 31 of next year.
- 8 Revenue deficit (state+centre combined) & (Corporation tax + Income tax)/Total revenue receipt of Centre and state

China

- 9 M2 is calculated using the year-end exchange rates released by State Administration of Foreign Exchange.

South Africa

- 10 Fiscal year: year begins on 01 April to 31 March of the following year.
M2 comprises:
 - * notes and coins in circulation outside monetary sector.
 - * cheque and transmission deposits.
 - * other demand, short & medium term deposits up to 6 months.

Source:

South African Reserve Bank, 2011.

Footnotes:

Government finance in fiscal years; year begins on 01 April to 31 March of the following year.

- 1 No definition available for some of the tax categories. Therefore this value is the residual of all other taxes. Total tax revenue minus the detail of all available categories. This also includes the adjustments made for South African Customs Union transfers.
- 2 M3 is the broadly defined money supply aggregate officially used in South Africa.
- 3 The prime overdraft rate serves as a market reference or benchmark rate for interest rates, but does not determine interest rates.

Explanatory Notes:

Russia

Budget Revenues monetary funds coming to the budget, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources of financing the budget deficit.

Budget Expenditures monetary funds paid from the budget funds, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources financing the budget deficit.

Deposit Rate average rate on deposits of individuals in credit institutions (including OAO Sberbank of Russia) for up to 1 year.

Lending Rate average rate on loans to corporate customers in credit institutions (including Sberbank of Russia) up to 1 year.

Annual rates are calculated as the average of monthly data.

India

General government includes Central Government and State Government

Income Tax: Income Tax Act, 1961 imposes tax on the income of the individuals or Hindu undivided families or firms or co-operative societies (other than companies) and trust (identified as bodies of individuals associated of persons) or every artificial juridical person. The inclusion of a particular income in the total incomes of a person for income-tax in India is based on his residential status. There are three residential status, viz., (i) Resident & Ordinarily Residents (Resident) (ii) Resident but not Ordinary Resident and (iii) Non Residents. There are several steps involved in determining the residential status of a person. All residents are taxable for all their income, including income outside India. Non residents are taxable only for the income.

Money and quasi money comprise the sum of currency outside banks, demand deposits other than those of the central government, and the time, savings, and foreign currency deposits of resident sectors other than the central government. This definition of money supply is frequently called M2; it corresponds to lines 34 and 35 in the international Monetary Fund's (IMF) International Financial Statistics (IFS)

China

Revenue of Consolidated Budget refers to income for the government finance through participating in distribution of social products. It is the financial guarantee to ensure government functioning. The contents of government revenue have change several times.

Expenditure of Consolidated Budget refers to the distribution and use of the funds which the government finance was raised, so as to meet the needs of economic construction and various causes.

Share of Deficit/Surplus of General of General Government to GDP = (Revenue of consolidated budget – Expenditure of consolidated budget)/GDP

The Contents of Government Revenue include the following main items:

- a **Various Tax Revenues** including domestic value added tax (VAT), Domestic consumption tax, VAT and consumption tax rebate for exports, business tax, corporate income tax, individual income tax, resource tax, city maintenance and construct tax, house property tax, stamp tax, urban land use tax, land appreciation tax, tax on vehicles and boat operation, ship tonnage tax, vehicle purchase tax, tariffs, farm land occupation tax, deed tax, and tobacco leaf tax etc.
- b **Non –Tax Revenue** including special program receipts, charge of administrative and institutional units, penalty receipt and others non-tax receipts.

The contents of Government Expenditure include the following main items :

- a) Expenditure for general public service; b) Expenditure for foreign affairs; c) Expenditure for national defence; d) Expenditure for public security; e) Expenditure for education; f) Expenditure for science and technology; g) Expenditure for culture, sports and media; h) Expenditure for social safety net and employment effort; i) Expenditure for science and technology; j) Expenditure for environment protection; k) Expenditure for urban and rural community affairs; l) Expenditure for agriculture, forestry and water conservancy; m) Expenditure for transportation; n) Expenditure for industry, commerce and banking etc.

South Africa

M0 = Deposits of monetary institutions with the central bank and banknotes and coin in circulation outside the central bank.

M1 =Notes and coin in circulation plus cheque and transmission deposits and other demand deposits of domestic private sector with monetary institutions.

M2 = M1 plus other short-term deposits held by the domestic private sector.

M3 = M2 plus long-term deposits held by the domestic private sector.

South African Reserve Bank.

Footnotes:

- 1 Public customs figures adjusted for balance-of-payment purposes.
- 2 Commodity gold .Prior to 1981 net gold exports comprised net foreign sales of gold plus changes in gold holdings of the South African Reserve Bank and other banking institutions.
- 3 Investments by foreigners in undertakings in South Africa in which they have individual or collectively in the case of affiliated organisations or persons, at least 10 per cent of the voting rights.
- 4 Investments by South African residents in undertakings abroad in which they have at least ten per cent of the voting rights.
- 5 Transactions on the current, capital transfer and financial accounts.
- 6 Liabilities related to foreign reserves include all foreign liabilities of South African Reserve bank and short term foreign loans to the central government by international organisations.

Explanatory Notes:

Russia

Export of goods removal of goods from the Russian Federation customs territory without of a guarantee of back importation. Export includes the removal of domestic goods from the country and reexport of goods as well. The domestics include foreign manufactured goods imported into the country and greatly processed (changing after this their main qualitative and technical characteristics).

Reexports include goods imported before to the Russian Federation customs territory and which then were removed from the territory without a payment or with refund of payment sum of import customs duties, taxes and without applying to the goods of economic embargo and restrictions. Recording of the good exports is realized by FOB prices or border prices of the exporting country.

Import of goods importing of goods into the Russian Federation customs territory without of reexport obligation. Imports include the brought goods for consumption in the economy and good imported into the country territory in according to the reimport system. Re-exports include goods removed before from the Russian Federation customs territory and which then were imported into the territory without custom duties .taxes and without applying to the goods of economic embargo and restrictions. Recording of the good exports is realized by FOB prices or border prices of the importing country (CIF) i.e. with taking into account of insurance cost and charges of goods transportation to their frontier of the importing country.

India

Exports are credited to the country of final destination as declared by explorers in the shipping bill whether that country possesses a sea-port or not. The country of final destination is defined as that to which goods exported from India are intended to pass whether by sea and land or by sea only or by air without interruption of transit, save in the course of transshipment or transfer from one means of conveyance to another.

Imports are classified with reference to the countries whence they were consigned to India and not with reference to the countries whence they were shipped directly to India. The country of consignment is defined as that from which the goods have come whether by land or sea or by sea only or by air, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. Thus the countries where goods are consigned are not in all cases the countries of actual origin of goods produces in one country maybe purchased by a firm in another country and then dispatched after an interval to India.

The data for Imports, Exports and Re-exports given are according to the Indian Trade Classification (based on harmonized Commodity description and coding system).

External Debt to GDP includes Long term debts as Multilateral loans, bilateral loans, International Monetary Funds Trade Credit, External Commercial borrowings; non-Resident Indian deposits, Rupees debts and Short term deposit.

Under current account of the BoP, transactions are classified into merchandise (export and imports) and invisibles. Invisible transactions are further classified into three categories, namely a) Service- travel, transportation, insurance, Government not included elsewhere (GNIE) and miscellaneous (such as, communication, construction, financial, software, news agency, royalties, management and business services); b) Income; and c) Transfers (grants, gifts, remittances, etc.) which do not have any quid pro quo. Under the Capital Account, capital inflows can be classified by instrument (debt or equity) and maturity (short or long term). The main components of the capital account include foreign investment, loans and banking capital. Foreign investment, comprising Foreign Direct Investment consisting of Foreign Institutional Investors (FIIs) investment, American Depository Receipts, Global Depository receipts (ADRs/GDRs) represents non-debt liabilities, while loans external assistance, (external commercial borrowings and trade credit) and banking capital, including non-resident India (NRI) deposits are liabilities.

China

Foreign Trade Statistics and Coverage China's official external trade statistics is implemented by General Administration of Customs of the Peoples Republic of China. Its compiled from the declarations, which are made to the Customs by imports, exports or their agents and subject to verification by customs officers at the time of customs clearance. External Statistics comprise all merchandise passing through China's Customs territory (with the exceptions mentioned below). Including: goods from abroad entering customs warehouses, bonded areas or special economic zones (SEZ) and goods leaving abovementioned areas to abroad; goods for inward or outward processing or assembling and subsequent re-exportation or re-importation; goods on lease for on year or more; goods imported or exported by foreign-invested enterprises; international aid or donations, etc. Excluding: Customs statistics do not cover temporary imports or exports; goods on lease for less than one year; travellers' personal effects; ship's and aircraft bunkers and stores obtained abroad; monetary gold and coins being legal tender; goods in transit through China.

Import and Export Valuation Imports are valued on a CIF basis, which is based on the transaction value and all freight, insurance and other charges incurred before discharging the goods at the first port of entry of China .Exports are valued on a FOB basis, which is based on the transaction value at China's port of shipment equivalent of the actual price at which the goods are sold. The Statistical value is expressed in RMB and USD respectively. Any transaction value in terms of a currency other than RMB or USD shall be converted into RMB or USD at the exchange rate between issued by the State Administration of Foreign Exchange.

Trading Partner The country of origin is recorded for imports while the country of final destination for exports. The country of origin refers to the country or region where the import goods have been grown, mined or manufactured. If two or more countries (regions) were involved in the manufacture, the place where last substantial working or processing was carried out will be recorded as the country (region) of origin. However, commodities whose nature or state have not been substantially changed will not be considered as having been processed or remanufactured. In instance where the country of origin cannot be ascertained, the import will be recorded as

“country unknown”. The country of final destination refers to the country of origin or where the export goods are to be consumed, utilized or further processed or manufactured. In instance where the country of final destination cannot be ascertained, the exports will be credited the final country (region) dispatched to as known at the time of exportation.

Inflows of FDI refer to the investment inside China by foreign enterprises and economic organizations or individuals (including overseas Chinese, compatriots from Hong Kong, Macao and Taiwan and Chinese enterprises registered abroad), following the relevant policies and laws of China for the establishment of ventures exclusively with foreign own investment, Sino-foreign joint ventures and cooperative entrepreneurs with the profits gained from the investment and the fund that enterprise borrow from abroad in the total investment of projects which are approved by the relevant department of government.

Outflows of FDI refer to enterprises set up or brought by domestic investors in foreign countries and in Hong Kong, Macao and Taiwan, and the economic activities centering on operation and management of those enterprise are under the control of domestic investors.

The Balance of Payment (BOP) is a statement that summarizes economic transactions between residents and non-resident during a specific time period.

The International Investment Position (IIP) shows at a point in time the value of financial assets of an economy that are claims on non-resident or are gold bullion held as reserve assets; and the liabilities of an economy to non-residents.

Explanatory Notes:

General

Tourism, Rome 1963.

International Visitor: An international visitor is any person visiting the country on a foreign passport and the main purpose of visit is other than the exercise of an activity remunerated from within the country of establishments of residence in the country. This definition covers two segments of visitors: Tourists' and "Same Day Visitors".

India

A "**foreign tourist**" is a person visiting India on a foreign passport, staying at least twenty four hours in the country, the purpose of whose journey can be classified under one of the following headings:

- (i) Leisure (recreation, holiday, health, study, religion, and sport);
- (ii) Business, family, mission, meeting.

The following are not regarded as "foreign tourist;

- Persons arriving, with or without a contract, to take up an occupation or engage in activities remunerated from within the country;
- Persons coming to establish residence in the country;
- "Same Day Visitors" i.e. temporary visitors staying less than twenty four hours in the country (including travellers and cruises).

China

Foreign Tourist Arrival refer to visitor arrivals who come to China (mainland) for sight-seeing, vacation, visiting relatives, medical treatment, shopping, attending conference, or to engage in economic, cultural sports and religious activities. In compiling statistics, each time of entering China (mainland) is counted as one person – time.

ANNEXURE – I

ASPECTS OF THE BRAZILIAN NATIONAL STATISTICAL SYSTEM

1. ORGANIZATIONAL STRUCTURE OF THE IBGE

The Brazilian Institute of Geography and Statistics (IBGE) is ruled according to the Law n.º5.878, of May 11th 1973, and the Statute – Decree n.º3.740, of June 13th, 2003. It is linked to the Ministry of Planning, with the role of coordinating the Brazilian Statistical System and being the main producer of official statistics in Brazil.

The Brazilian official statistics are being produced by IBGE, Central Bank, ministries and statistical state agencies. IBGE is the official statistics office responsible for the production, analysis and dissemination of Statistical information (demographic, economic and social), as well as geographical, cartographic and geodetic information and those related to natural resources and environment.

IBGE besides its functions in the Statistical System is also the main producer of geo scientific information and has the role of coordinating the National Cartographic System. One of the main projects of the production of geo scientific information is the construction of the National Spatial Data Infrastructure – INDE. The purpose of the INDE is to catalogue, to integrate and harmonize geospatial data from Brazilian institutions, producers and sponsors of this kind of data, so that these data can be easily located, accessed and used for several uses and for any user who has Internet access.

IBGE is responsible for the construction, provision and operation of the Brazilian Geospatial Data Site-SIG Brazil, as well as for the management of the Brazilian Directorate of Geospatial Data-DBDG. It is also responsible to prepare the proposal for obtaining the necessary resources for the implementation and maintenance of INDE.

The programs carried out by IBGE are fundamental for both the government and the society. Several public policy actions and nationwide are based on the information produced by IBGE on the Brazilian reality.

In order to produce statistical and geo scientific information, IBGE is present countrywide, with units at headquarters, in Rio de Janeiro, and in state and municipal levels, with the following composition: Collegiate bodies of senior direction: Technical Council, Board of Trustees, Board of Directors; Channels of direct and immediate assistance to the President: Cabinet, Attorney General; Sectional bodies: Internal Audit, Executive Board; Specific individual organs. Directorate of Surveys, Directorate of Geosciences, Directorate of Informatics, Centre for Documentation and Information Dissemination, National School of Statistical Sciences, 27 State Units (26 state and Federal District), with 581 agencies to collect and disseminate data.

The production of statistics and geo scientific information is carried out by the Directorate of Geoscience and Directorate of Surveys.

These departments are supported by the Directorate of Informatics, which ensures the infrastructure of computer hardware and software and data communication. The Centre for Documentation and Information Dissemination is in charge of the dissemination policy for the results of all surveys carried out by the institution, publicizing them online, including micro data, free of charge.

The Executive Board is accountable for planning, budget and overall coordination of IBGE's work.

The Directorate of Surveys is responsible for the production of social, economic and demographic statistics as well as for the production of synthesis to the System of National Accounts and Social indicators. It is also responsible for coordinating National Statistical System, systematically calling meetings with users and other producers of statistical information.

The Directorate of Geosciences is responsible for the production of geographical, geodetic and cartographic information, as well as those related to environmental and natural resources. It also coordinates the fundamentals Geodetic and Basic Cartography plans.

IBGE maintains the National School of Statistical Sciences, which offers the following courses: Bachelor of Science degree in Statistics, Post Graduate Diploma in Environmental Analysis and Land Management, Masters in Population Studies and Social Research and training programs for IBGE technicians.

The units of IBGE at headquarters are responsible for the design of surveys, analysis of results and coordination of the teams working at the national level.

The units of IBGE located throughout the national territory are responsible for the collection, review and submission of primary statistical data to headquarters.

These units also conduct field activities related to geodesy and cartography.

2. WORK PROGRAM FOR THE PRODUCTION OF STATISTICS

In 2012, IBGE has updated its Strategic Plan in order to set goals and targets for the future years. Thus, the Strategic Plan is the main instrument of governance of the institution.

The program of work and its schedule are discussed by all technical and infrastructure areas before being consolidated into IBGE'S Strategic Plan. This is submitted to the Planning Board, composed by IBGE's President and directors, which evaluates and approves it.

IBGE's Strategic Plan subsidizes the preparation of the Federal Government Multi-year Plan (PPA, in Portuguese) for the same period. The PPA covers all areas of government and describes the main objectives and goals for various organisations and ministries.

The institutional goals to be met in a semester have been set at the beginning of each semester. Institutional goals encompass the full range of publications planned for the period. These goals are approved by the Board and broadly disseminated, both internally and on the internet. They are an item in the objective evaluation of the institution's performance in accomplishing its mission.

IBGE's work program is presented to the various Advisory Committee, which are composed of renowned members in the area, who discuss methodological issues and assist in setting priorities.

The Advisory Committees cover the following areas: Population Census, Agriculture Census; National Index of Consumer Prices; Mortality Statistics; Planning Control and Evaluation of Agricultural Statistics; Social Statistics: Brazilian Regional Accounts.

As the demands for information not included in the predetermined work program cannot be satisfied with the resources available, they are met through agreements with the concerned governmental entities, which fund additional surveys. Examples of additional surveys are those demanded by the Ministries of Health, Education and Social Development.

IBGE also cooperates with various ministries, such as the Ministry of Finance, and the central Bank for the preparation of National Accounts.

Annually, the Ministry of Labor provides IBGE with the Annual list of Social Information (RAIS), which consist of the set of administrative records used to update the Central Business Register (CEMPRE). This register is used to select the sample of enterprises for the Annual Economic Surveys, which has replaced the Economic Censuses since 1990's.

To set their long term lines of work, IBGE hold regular meetings with producers and users of social, economic and territorial information. These meetings aim at preparing the revision and expansion of the General Plan of Statistical and Geographical Information, based on mobilization and consultation to producers and users of information, including governmental institutions, survey institutes, NGOs, Scientific associations, as well as technicians and researchers interested in the production, dissemination and use of information.

This action resulted in the preparation of a diagnosis of the state of the art of production of information in the sphere of public services and the mapping of gaps, identifying opportunities for improvement and demands for new information.

The growing demand for socioeconomic and demographic information, as well as the inclusion of new issues, requires research in shorter time intervals.

One solution to fit the statistical offices to this new reality has been the adoption of models that address a systematic conception, with the production of integrated information sources and databases.

The Integrated System of Household Survey (SIPD) will integrate the existing household surveys (National Sample Survey of Household - PNAD, Monthly Employment Survey - PME, Household Budget Survey - POF, Urban Informal Economy Survey - ECINF) and meet new demands.

Being a new project, with proposals of significant dimension, planning SIPD requires intensive contact with users and producers of information. In this sense, the steps in the development of SIPD have been presented in seminars and conferences sponsored by IBGE.

The transparency of this process assures users the joint monitoring and evaluation of the paths taken in building this new project.

3. SOCIAL STATISTICS COMMITTEE

The Social Statistics Committee, which was established by Inter ministerial Decree n. °424, issued on December 6, 2007, is a forum for the discussion and evaluation of the demands of the Social Statistical System of the Country.

The following Ministries and Institutes are part of the Social Statistics Committee: Ministry of Social Development and the 'Fight against Hunger' Food Programme; Ministry of Education; Ministry of Planning, Budget and Management; Ministry of Social Welfare; Ministry of Health; Ministry of Labor and Employment; Institute of Applied Economic Research - IPEA; Ministry of Justice; National Institute of Educational Studies and Research Anisio Teixeira - INEP; and Brazilian Institute of Geography and Statistics - IBGE.

The Social Statistics Committee is composed of the Managerial Committee, which is responsible for setting guidelines for the work of the committee, and the Executive Group, responsible for implementing such guidelines.

The work of the Social Statistics Committee has been following the guidelines below since 2009: Draw up the inventory of social statistics, especially the official ones, updating them regularly; Ensure and improve the comparability and accessibility of information; Encourage the adoption of concepts, classifications and methods for processing, storing and presenting official statistical information; Fill in information gaps and expand the integration of data sources; Organise the demand for information and coordinate their production and use; Regulate and facilitate access by various government agencies to existing databases, ensuring transparency, visibility and secrecy; Undertake actions in order to allow visibility to the work developed by the Committee; and Adopt the Fundamentals Principles of Official Statistics.

The Executive Group has carried out intensive work, such as the identification of data bases of several agencies, the preparation for standardized procedures for the project Metadata Bank at IBGE.

One of the main goals of the committee is to integrate the various database of social information derived from surveys and administrative records, in order to promote the effective coordination and governance of the national statistical system.

4. MUNICIPAL COMMISSIONS ON GEOGRAPHY AND STATISTICS

IBGE invests in strengthening the principle of transparency, allowing society to know and follow the development of its activities.

In this context, IBGE has expanded the operation area of the old Municipal Census Committees, which used to be created to function only when censuses were being carried out.

Municipal Commissions on Geography and Statistics (CMGE's, in Portuguese) have been created, from 2010 Brazilian Census, in order to broaden participation of local communities in the processes and dissemination of the studies, surveys and general maps developed by the institution.

The CMGEs include the participation of representatives from IBGE, as well as executive, legislative and judicial representatives of municipalities and representatives of other local civic organisations.

5. TECHNICAL COOPERATION

The following nationwide technical cooperation may be highlighted: Ministry of Health; Ministry of Education; Ministry of Cities; Ministry of Agrarian Development; Ministry of Aquaculture and Fishing; Special Secretariat of Policies for Women at the Presidency of the Republic; Ministry of Social Development and the "Fight Against Hunger" Food Program; Special Secretariat for Human Rights at the Presidency of the Republic; Ministry of Culture; National Justice Council (CNJ).

With regard to international technical cooperation agreements, the following work may be highlighted: Specialized Meeting on Statistics of MERCOSUR – the Cooperation Project in Statistics towards the integration MERCOSUR and the strengthening of its national and regional institutions through the development, improvement, harmonization and integration of the production and dissemination of statistics; The technical assistance from the Australian Bureau of Statistics (ABS) within the project for the review of the Production Process of Economic Statistics.

In the period of 2010-2013, IBGE has been conducting international technical cooperation agreement on technology and methodology on population and agricultural censuses; social, demographic and economic statistics with many countries.

6. INTERACTION WITH THE INTERNATIONAL COMMUNITY

IBGE has extended its participation in the international Statistical community with United Nations Statistics Division - UNSD, the Statistical Conference of the Americas - SCA, the Conference of European Statistics - CES, the Organisation for Economic Cooperation and Development - OECD, the World Tourism Organisation - WTO, the International Labour Organisation - ILO, the Community of Portuguese Speaking Countries - CPLP, BRICS, among others.

7. COURSES AND CONFERENCES FOR THE PRESS AND GENERAL USERS

In recent years, IBGE has expanded the role of communication and the relationship with the press, as an alternative way of publicizing its work and building its image and credibility before the public.

In press conferences, the release is available for participants at the beginning of the event. At the same time, indicators and commentary on survey results are published at the IBGE's website.

Besides structural surveys, IBGE monthly publishes about ten conjuncture surveys. Thus approximately 100 press conferences are held at IBGE a year.

The publication of the so-called conjuncture surveys is regulated by Decree n. 355, issued on November 5, 2007, and signed by the Ministry of Planning.

According to the decree, survey results must be sent to government officials at 7 a.m., i.e., two hours in advance of public access to the data, which happens at 9 a.m.

As to access to information, IBGE releases, on this website, the list of state official who have the precedence over the public, a fact that ensures the transparency of the procedure.

Qualifying journalist is essential to improve the reports they write on IBGE surveys. In recent years, the Coordination of Social Communication (CCS) has organised several courses for journalists. Courses on more complex information were held (e.g. National account and census) as well as training for the use of digital tools that allow quick access to statistical information.

8. ACCESS TO THE INTERNET AND OTHER ACCESS

IBGE provides several ways for accessing the information it produces, so that the public is better served: publications (books and periodicals) accompanied by CD-ROMs; free telephone consultation; a Central Library, located at the Centre for Documentation and Information Dissemination in Rio de Janeiro; a connection with the Department of Documentation and Information Dissemination at the IBGE State Units, located in all Brazilian state capitals.

IBGE provides electronic products and services that are the main media through which information such as: specific files with data on population, economy, cartography, geodesy, natural resources and environment in free access in the website (<http://www.ibge.gov.br>).

Besides the electronic publications the IBGE web page has two important databases to stand out: Aggregated Statistical Tables (SIDRA in Portuguese) - Database with information grouped in territorial level that allows the users to construct their own tables according and compare data to selected information; and Statistical Multidimensional Database (BME in Portuguese) – Database with micro data information that allows users to construct tables according to selected information and confidentiality constraints. This one requires Internet subscription.

ANNEXURE – II

A BRIEF OVERVIEW OF THE RUSSIAN STATISTICAL SYSTEM

Federal State Statistics Service (Rosstat) is the federal authority which is responsible for the development of the official statistics on social, economic, demographic, ecological and other social processes in the Russian Federation.

State statistics in the Russian Federation is based on the principals of centralized work. The main task of the state statistics is to provide timely reporting of full and objective information on the socio-economic development of Russia, its regions and economic sectors to the public authorities at all levels, media, scientific community, commercial structures, population and international organisation in order to achieve this objective. Federal plan of statistical works is being developed; it defines the main directions of statistical monitoring of socio-economic and demographical processes in the; it is also formed by the Rosstat on the interdepartmental basic and adopted by the Government of the Russian Federation.

Rosstat main functions:

- Submits in accordance with the current procedure the official statistical information to the President of the Russian Federation, the Government of the Russian Federation Assembly of the Russian Federation, other bodies of state power, the local self-government bodies, mass media, organisations and citizens, and also to international organisations;
- Devises and approves in accordance with the current procedure within its jurisdiction the official statistical methodology to conduct the federal statistical observations and to form the official statistical information and ensures that the specified methodology complies with international standards and the principles of statistics;
- Approves the forms of federal statistical observation and instructions on their completion upon the proposal of the subjects of the official statistical accounting, unless the contrary is established by federal laws;
- Coordinates activities in the sphere of official statistical accounting when preparing the federal plan of statistical works, formulating the proposals on its actualization, and also approving the forms of the federal statistical observation and instructions on their completion;
- Carries out the preparation, methodological support, federal statistical observations in the respective sphere of activity and the processing of data received as a result of observations for the purpose of forming official statistical information;
- Devises and keeps in accordance with the current procedure the all-Russia classifications of technical, economic and social information in the respective sphere of activity;
- Ensures within its jurisdiction the relevant conditions of protection and defense of the information received during the process of the Services activity and constituting a service, bank, tax and commercial secret and other confidential information;
- Provides users with official statistical and other information in accordance with the current procedure and on the basis of agreements for rendering information services;
- Fulfillment of obligations arising from membership of the Russian Federation in the international organisations; research and summarizing of international experience in statistics.

Statistical System: principles of organisation

The state statistic system is a network of hierarchically and functionally interrelated organisation that collect, process and disseminate statistics, characterizing rates and proportions of socio-economic and demographic development of the country and its place in the Modernworld.

The system is formed in accordance with the administrative territorial division of the country in order to ensure provision of full and objective statistical information on socio-economic development of the Russian Federation, its regions, industries and economic sectors to the public authorities and all levels of government, the media, scientific community, commercial structures public and international organisations.

The system includes two organisational levels: federal, represented by Rosstat Head quarter, and regional level, represented by Rosstat regional offices.

Federal level of the state statistics

Federal level of the state statistics includes: Federal State Statistics Service (Rosstat) Headquarter, Main computing centre, Scientific Research Institute for problems of socio-economic statistics, Scientific Research and Design and Technology Institute of Statistical information, Information and Publishing center "Statistics of Russia "

Regional level of state statistics

Russian Federation is divided into 82 constituted entities (regions). In each constituent entity (republic, oblast, autonomous area, territory) Rosstat regional office.

Rosstat regional offices ensure collection, pre-processing of statistics in each region; information providing to the republic, provincial and regional authorities and other interested users.

Legal Basis of the official Statistics Activities

Federal State Statistical Service activity is based on the Constitution of the Russian Federation, federal constitutional laws, federal laws, decrees of the President of the Russian Federation and the Government of the Russian, international treaties of the Russian Federation.

The basis of the statistical activity in Russia is the federal law "On official statistical accounting and the system of the state statistics in the Russian Federation" that was signed by the President of the Russian Federation in the 2007. Carrying out of such significant statistical events as population census and agricultural census is based on relevant federal laws.

In order to provide Rosstat with all necessary information from respondents aiming to shape government information resources, the Government of the Russian Federation issued "Regulation on conditions of obligatory provision of primary statistical data and administrative data to the institutions of official statistical accounting".

Emerging challenges

It is essential for effective country's socio-economic development, governance and regulation to receive timely and provide analysis of complete, reliable, scientifically accurate official statistical information on social, economic, demographic, ecological and other public process in the Russian Federation.

Now a day's Russian statistics is being developed under conditions of significant socio-economic changes, administrative reform, budgetary process reformation, transition to the international standards of financial data reporting. This transition defines the search and implementation problem of principally new approaches to official statistics as well as creation of flexible system of information and statistical support, responding to changes occurring in the society.

In mid-term perspective Federal task program "Development of the state statistics in Russia 2007-2011" is designed.

This program aims at creation of a unified system of information statistical support to government bodies by integration of information statistical resources in the scale of the whole country. The system will allow to receive in time reliable and comprehensive indicators of macroeconomic statistics for effective decision-making and forecasts in all spheres of national economy.

Development of the statistical system are realized on the basis of further technological modernization, implementation of new planning and managing methods, retaining and efficiency improvement of human resources in the state statistics.

The principal aspect of Russian statistics modernization is higher transparency of statistical methodology, definition of forms and methods for realization of broad access to official statistics for all interested users.

ANNEXURE – III

A BRIEF OVERVIEW OF THE INDIAN STATISTICAL SYSTEM

India has a federal structure of Government and the Indian Statistical System Functions within the overall administrative set up of the country. The division of responsibility for administration between the Union Government and the State Governments is on the basis of three-fold classification of all subjects, namely, the Union List, the State List, and the Concurrent List. The Concurrent list represents the subjects where both the Union and State Governments can operate, and it includes the subject Statistics. There is a further division of responsibility, by subjects or groups of subjects, among the different Ministries/Departments of the Union Government and among the Departments of State Government, on the basis of their administrative functions.

The Indian Statistical System, therefore, may be treated as both decentralized and centralized system. For example, the large-scale statistical operations conducted all over the country like Population Census, Economics Census, Agricultural Census and Livestock Census, as well as nation-wide sample surveys including the Annual Survey of Industries and the Socio-Economic surveys are the responsibility of central agencies. Similarly, compilation of national accounts, preparation of all-India Prices and Industrial production indices are also Central activities. In the case of States, the State statistical organisations collect and generate data on a number of variables. The Central Government acts as the coordinating agency for presentation of statistics on an all-India basis even in fields where the States have primary authority and responsibility for collection of statistics. The State Directorates of Economics and Statistics (DEs) carry out the responsibility of coordination of all statistical activities at the State level and keeping liaison with the Ministry of Statistics and Programme Implementation (MOSPI) for the purpose of maintaining uniformity and consistency in the data produced and consolidated at different levels.

Statistical System at the Centre

The Ministry of Statistics and Programme Implementation (MOSPI) is the nodal agency for planning and facilitating the integrated development of the Statistical system in the country including laying down norms and standards in the field of official statistics, evolving concepts and definitions, suggesting methodologies of data collection processing and dissemination of results. The Ministry has two wings viz. National Statistical Organisation (NSO), commonly called 'Statistics Wing' and the 'Programme Implementation (PI) Wing'. The NSO consists of the Central Statistics Office (CSO) including Computer Centre and the National Sample Survey Office (NSSO). The Programme Implementation Wing has three divisions viz. Twenty Point Programme Division, Infrastructure Monitoring Division, and Member of Parliament Local Area Development Division. In addition to a number of publications brought out by the MOSPI, both NSO and PI wing generate a lot of statistical information which is used by policy planners, researchers and other users. The MOSPI also has an autonomous Organisation viz. the Indian Statistical Institute (ISI) which is a premier statistical institute of international repute.

Besides the NSO, most of the line Ministries/Departments in the Government of India dealing with different subjects such as Agriculture, Water, Health, Rural development sectors etc. have statistical establishment to perform statistical activities for the respective Ministry/ Department, and which are generally headed by senior level statistical functionaries to facilitate proper coordination with NSO. Most of these departments bring out respective statistical data/publications.

Central Statistics Office (CSO)

CSO is headed by a Director General with the headquarters located in New Delhi. It consists of five major Divisions viz National Accounts Division (NAD), Economic Statistics Division (ESD), Social Statistics Division (SSD) Training Division and Coordination and Publication Division (CAP). In addition, CSO has a premier training institute called National Academy of Statistical Administration (NASA) located near Delhi which has been conducting national/international statistical training programmes for last three years.

The Central Statistical Office is responsible for coordination of statistical activities in the country, and evolving and maintaining statistical standard. Its activities mainly include National Income Accounting; conduct of Economic Census and its follow up surveys, processing of data collected through Annual Survey of Industries and preparation of Reports compilation of Index of Industrial Production, as well as Consumer price Indices, Gender Statistics, and imparting training on Official Statistics. CSO brings out a number of publications periodically including Statistical Year Book, Monthly Abstract of Statistics, India in figures, Energy Statistics, Infrastructure statistics, Environment Statistics etc. besides disseminating various statistical data to various national and international agencies. The other activities include preparation of Five Year Plan and Annual Plans in respect of statistical matters, holding conferences with the Central and State statistical agencies, revision of National Industrial Classification, preparation and implementation of Strategic Plans to make available data on key parameters, to improve the quality and reliability of existing data sets, to make available new data sets on emerging fields to meet increasing data demands, and, to reduce time lag in dissemination of data.

The Computer Centre under CSO, handles the data processing jobs of the MOSPI, provides training to statistical personnel on software, maintains the MOSPI's website (www.mospi.gov.in) and the National Data Warehouse of Official Statistics.

National Sample Survey Office (NSSO)

The NSSO functions under the overall direction of National Statistical Commission with requisite independence and autonomy in the matter of collection, processing and publication of NSS data. The NSSO is headed by the Director General and Chief Executive Officer (DG & CEO), who is also the Member-Secretary of the Steering Committee.

The National Simple Survey Office (NSSO) conducts large scale sample surveys including socio-economic surveys, Annual Survey of Industries, collection of price data for rural and urban sectors etc. besides carrying out sample checks on area enumeration and crop estimation surveys and prepares the urban frames useful in drawing of urban samples. The major activities of the NSSO pertain to Survey Design, Field Operations, Processing of NSSO data and Publication NSSO Reports.

Statistical System in the States

The Directorates of Economic and Statistics (DESS) in the States/UTs act as the nodal agencies for coordination of all statistical activities in the States/UTs.

While most of the States/UTs have been formally declared by the State Governments as the Nodal Agencies on all statistical activities, the remaining few though not yet formally declared, continue to act as coordinating agency on statistical matters in the States /UT. Most of the States/UTs have District Statistical Offices (DSOs) which act as the field offices of the DESS for collection and compilation of statistical data for the districts. The DESS perform almost the same functions in the States/UTs as the NSO at the centre viz. bring out some key statistics, coordination with the Central and State Statistical agencies, dissemination of statistics, etc.

Legal Support for Collection of Data

Data collection in India has been largely based on a voluntary response except for the statutory support provided through the erstwhile "Collection of Statistics Act, 1953" to collect industrial data. This Act has since been amended as the new 'Collection of Statistics Act 2008 which is much more comprehensive to enable collection of various socio-economic data.' The collection of Statistics Act 2008 'is administered by the Ministry of Statistics and Programme Implementation while another Act viz. Census Act 1948 is administered by the Office of the Registrar General Of India under the Ministry of Home Affairs, to collect population and other demographic data. Besides the two important Acts, there are a number of other Acts, Rules and Procedures being administered by concerned subject Ministries/ Departments, to collect statutory administrative returns which help in generating different subject related data.

Emerging challenges

The Indian Statistical system has played an important role in facilitating informed decision-making, and greatly contributed in planned social and economic development in the country. A large variety of data is produced by the statistical system and extensive statistical data base have been created which help in meeting the data requirements of not only the internal agencies but also the international agencies besides a large number of other users such as researchers. The system is undergoing steady transformation to meet ever increasing information needs following challenges arising out of the globalization and liberalization of economy. It involves many significant structural and operational changes in the statistical system both at the Centre and in the State. It includes constitution of National Statistical Commission (NSC) to revamp the statistical system in the country with a view to improving the credibility, timeliness and adequacy of data. A comprehensive India Statistical Strengthening Project (ISSP) has been initiated with the collaboration of the World Bank to strengthen the statistical system in the states, in addition to an extensive programme undertaken to strengthen statistical capacity and infrastructure at sub-state level.

Further, keeping in view the need to modernize the statistical system, there is an increasing thrust on deploying latest information and communication technology in data collection, data management and data dissemination for improving efficiency of statistical operations and activities. For example, e-collection of industrial and price data has been in operation already and e-system for the dissemination of various data including e-publication initiated to facilitate wider and speedier access of such data. Steps are also being taken to accelerate e-governance to engage citizen's directly in the process of data sector reforms. Indeed, the official statistical system is relentlessly gearing up to meet growing aspiration of different stakeholders in the emerging fast-changing environment by providing requisite data as reliably and timely as possible besides undertaking appropriate measures to upgrade statistical skills and capacity through elaborate training programmes and promoting coordination between Central and State statistical agencies.

ANNEXURE IV

A BRIEF INTRODUCTION OF THE STATISTICAL SYSTEM OF CHINA

Since its establishment, National Statistical System of the People's Republic of China has been developed and improved during the 60-year process of reform and adjustment to meet the demands for the new conditions and situation. The *Statistical Law of the People's Republic of China* stipulates that the State shall establish a centralized and unified statistical system, with a statistical administrative structure under unified leadership and with each level assuming responsibility for its own work.

The government statistical system comprises the government comprehensive statistical system and the government departmental statistical system. The government comprehensive statistical system is consisted of the statistical institutions established through a top-to-down model and relevant statistical staff from all the administrative levels. National Bureau of Statistics of China is established under the State Council, independent statistical institutions are established in local governments at and above the county level, and governments of townships and towns are staffed with full-time or part-time statisticians, who are responsible for the specific coordination and administration of the statistical work in their respective administrative areas. The government comprehensive statistical system adopts the management model as "unified leadership and decentralized administration".

I. Government Comprehensive Statistical System

1) National Bureau of Statistics of China

As an organ directly under the State Council, the National Bureau of Statistics of China (NBS) is responsible for directing and coordinating the statistical work throughout the country and national economic accounts. In the entire national statistical system, NBS is a main provider of national statistical data and a coordinator of the government departmental statistics and local statistics. Pursuant to the *Statistics Law of the People's Republic of China*, the main function of NBS is to be responsible for organizing, directing and coordinating the statistical work throughout the country, to formulate statistical policy and planning, basic national statistical system and unified statistical standards, approve the statistical standards of departments, draw up a plan or scheme for important general surveys of the national conditions and strength jointly with the departments concerned, organize and conduct the important general surveys of the national conditions and strength such as Population Census, Economic Census and Agricultural Census, organize and conduct the statistical survey of key industries of the economy, collect, aggregate, collate and provide the statistical data related to the surveys, and synthetically collate and provide the basic national statistical data, and to check, administer and publish the basic national statistical data and publish periodically the statistical data related to national economy and social development, and to administer the departmental and local statistical survey programs by law.

NBS has, divided by professional and function, set up 18 administrative units at departmental level, 2 institutions operating as administrative units, 10 institutions (in Beijing) and China Statistics Press directly under NBS. According to the needs of its work, NBS establishes Survey Offices in each province (municipality, autonomous region) and a survey team in each city (prefecture, autonomous prefecture and league) and in one-third of counties (cities at county level, districts and banners), which are as agent organs of NBS and vertically administrated under NBS, and are mainly responsible for the surveys of key statistical data required for the macroeconomic control and national accounts assigned by NBS mainly through sampling surveys.

2) Local Bureau of Statistics

Independent statistical institutions are established in local governments at and above the county level, and statistical stations are established or statisticians are staffed in the people's governments of townships and towns, who are responsible for carrying out their tasks of State statistical surveys and for organizing, guiding and coordinating the statistical work in their respective administrative areas. The statistical institutions of local governments at various levels are subordinated to the dual leadership of the governments at their level and the statistical institutions at higher level, in terms of statistical work, mainly under the leadership of the statistical institutions at higher level.

II. Departmental Statistical System

The ministries of the State Council and departments of local governments at various government levels do, according to the needs of their statistical work, establish statistical institutions and staffed with statisticians, forming a departmental statistical system. The main function of departmental statistical system is to organize and coordinate the statistical work within the departments, to execute the tasks of State and local statistical surveys, to draw up and carry out statistical survey plans within the departments and to collect, compile and provide statistical data, to make statistical analysis and exercise statistical supervision over the implementation of plans of the departments and of the enterprises or institutions under their jurisdiction. As a main system of statistical work, the national statistical system has the power to direct and coordinate the statistical work in the departmental statistical system.

III. Statistical Laws and Regulations

Whether statistical institutions or statistical set-ups in enterprises and institutions, must comply with the national statistical laws and regulations and conduct statistical surveys according to the statistical indicator systems and statistical survey methodologies formulated by NBS.

Statistical legal system in China comprises the statistics law ("*Statistics Law of the People's Republic of China*"), administrative regulations (including Regulations for Census and Regulations for Customs Statistics), administrative rules, regulatory documents (including the Interim Measures for Survey Programs of Departmental Statistics, the Measures for Administration on Foreign-Related Surveys and the Measures for Administration on Approval of Statistical Surveys) and local statistical regulations and rules. Pursuant to the *Statistics Law of the People's Republic of China*, State statistical survey programs are worked out by NBS, or jointly with the relevant ministry or ministries of the State Council, and are submitted to the State Council for documentation, but important programs shall be reported to the State Council for examination and approval. Statistical survey programs of departments are worked out by the relevant ministries or departments of the State Council and are reported to the statistical institution at the same level for the documentation or examination and approval. Local statistical survey programs are worked out by statistical institutions of local governments at and above the county level, or by statistical institutions of local people's governments at and above the county level jointly with the relevant department or departments, and shall all be reported to the statistical institution at the higher level for the documentation or examination and approval. In drawing up a plan for statistical survey programs, it is necessary to draw up simultaneously appropriate statistical survey system, which shall be reported for examination and approval or for the documentation. A statistical survey system shall stipulate survey objective, scope and coverage, methods, respondents, organization, forms or questionnaires, and submission and release of statistical data. A statistical survey shall be organized and conducted under a statistical survey system approved. Any change of the contents of statistical survey system shall be submitted to the original examination and approval authority for approval, or to the original registration authority for the documentation.

IV. Statistical Survey

NBS collects statistical data mainly through periodical censuses and current statistical surveys, and sorts out statistical data through ad hoc surveys, typical surveys and administrative registry records. At present, the important general surveys of the national conditions and strength by NBS include Population Census, Agricultural Census and Economic Census, and 47 current statistical surveys, including national accounts, agriculture, industry, energy, investment, construction, trade and external economy, services, urban and rural households, price, society and science and technology, labor force, wages and salaries, are organized and conducted. These surveys cover main aspects of economy, society, population, environment and resources. The contents of both the censuses and surveys basically cover all the aspects concerning with economy, society, population, environment and resources.

The government departmental statistics involve traffic, tourism, finance, banking, import and export in customs, utilization of foreign capital, culture, education, health, science and technology, registry of permanent residence, social development, etc.

V. Release and Provision of Statistical Information

In order to provide the official statistics and products on China to the whole society and international community more in quantity, shorter in time lag, and better in quality, NBS releases statistical survey data and supplies with value added products via statistical processing through various channels and in various ways. For the time being, a system of regular releases of statistical information has been established, including various well arranged types, such as, internet release, press conference, public data bank and publications, i.e., mainly varieties of yearbooks. In recent years, as the information technology moves forward, NBS has newly developed a series of visual products over the cell phones, such as "Statistics in China", "China in Figures", etc. which enable the release and provision of statistical data and products more efficiently, more frequently and richer in content. In addition, the statistical institutions in 31 provinces, autonomous regions and municipalities, as well as many cities and counties have also formed their own relevant regular patterns for timely data release, which forms a hierarchical and widely covered layout for statistical data release and provision in China.

VI. The Main Targets and Latest Development of China's Statistics

The transformation of Chinese economy to the market system is under way with rapid and profound development, which has posed higher requirements on the China's statistical system. As to these all new requirements, the Chinese national statistical system is making its great efforts to enhance the statistical capacity, improve statistics quality and the credibility of official statistics, and to mend the pace of modern service-oriented statistics. Since 2012, in order to reform the statistical production modes, NBS has implemented the Four Major Projects on industrial enterprises above designated size, wholesale and retail and catering businesses above designated size, qualified construction enterprises and real estate development enterprises. Up to now, a true and complete, timely updated business registry of establishments has taken into shape; a standardized system of integrated questionnaires for business surveys has been worked out; a comparatively convenient and applicable data collection and processing software has been developed; a comparatively safe and efficient online reporting system for business statistics has been set up and used all over China. The successful implementation of the Four Major Projects symbolized the profound reform of the statistical production modes, and initially realized the whole processes from program design, task deployment, to data collection, processing, transmission, storage, processing for analysis electronically, efficiently and by intranet in our

statistical work. In these four areas, the design of the survey programs and the task deployment are unified, the data collection and data sharing are monitored at various levels. The coverage of the Four Major Programmes will be continuously expanded, the service functions of the direct online reporting system will be actively developed, and a modernized service-oriented statistical system for users, for local statistical grassroots, and for survey respondents will be constructed in the national Statistical system of China.

ANNEXURE V

STATISTICAL SYSTEM OF SOUTH AFRICA

The South African Statistical system is nearly 100 years old, but has only served the needs of all its peoples for a relatively short period. The advent in 1994 of the democratic dispensation provided the production of statistics with two organisational model options for transformation. The first model was to centralise the production of most of the statistics into a single agency, the National Statistical Office (NSO) which was the then Central Statistical Service (CSS). The CSS was later transformed into Statistics South Africa (Stats SA) consisting of a head office and branches in the provinces, and much later on regional offices were established at sub-provincial level. The minority of the statistics excluded from centralisation were largely of a financial nature such as the balance of payments. These would be generated by the relevant agencies including the South African Reserve Bank (SARB) and the National Treasury (NT). Indeed the feeling that centralisation was the way to go was prevalent both within Stats SA and in other organs of state. The second model was to decentralise the production of most of the statistics whereby the various organs of state would produce statistics on the basis of their specialist subject areas. Naturally statistics-producing organs of state would constitute a statistical production system which would require coordination. The model ultimately adopted was a product of an evolutionary process. Statistical production faced four major pressures which overlapped in some areas. First was ideological transformation from a focus on "own affairs" of the apartheid political dispensation to a focus on integration of the total population and geography of the new state. This translated into transformation of the demographics of the CSS, integration of the Bantustan statistics offices into the CSS, and establishment of provincial CSS offices to facilitate data collection by head office. Second was the data gap facing the new government with regard to policy and programme development. Alleviation of poverty and inequality, especially service delivery, and the provision of developmental opportunities was unquestionably urgent. This provided the imperative for the 1996 census of population and housing. Third was the rationalisation of the statistical series produced so they could be relevant to the aspirations of the citizenry. The rationalisation included the introduction of the production of social statistics in addition to the existing economic statistics. Fourth was the drive to improve the quality of the statistics produced by the NSO.

Although they are still around at different levels of intensity, the pressures mentioned above were most intense during, and coincided with, the tenure (1995-99) of the first head of the CSS which later became Stats SA. During this period the transformation model of statistical production was the centralise done. However, overtime it had become increasingly clear that Stats SA had very limited capacity to cater for most statistical needs of users. In the same breath the potential of other organs of state for filling the gap between what Stats SA produced and what users needed was recognised. Acknowledgement of the current Statistics Act (No. 6 of 1999). The Act specifically provided for Statistician –General as executive head of Stats SA as well as coordinator of statistics produced by other organs of state. It was a landmark marking the production of statistics in the country because it defined a new direction for the strategic and work programmes of Stats SA as well as defining the role of other organs of state in the production of statistics. Incidentally the Act coincided with the change of name of the NSO from CSS to Stats SA.

In 2000 a new head took over the reins at Stats SA and immediately embarked on a new vision for statistical production in the country. Although the new vision was as yet to be formally defined, it was hinged on coordination of statistical production. A National Statistics Systems Division (NSSD) was established at Stats SA to tease out the coordination process. The NSS concept became a Cabinet Lekgotla of January 2002. Although the SANSS was included in the Programmes OF Action (POA) of the government, for the next eight years or so it lacked prominence especially at Stats SA for three main reasons. First was the relatively perennial capacity constraint. Second and most significant was the continued pressure to get Stats SA as an entity to work more effectively and efficiently with particular regard to the quality of its own products. The third was the challenge of change management.

It was not until 2009 that the NSS concept influenced the strategic direction of Stats SA. Since then the department's five-year strategic plan and the annual work programme have undergone a strategic shift that emphasises implementation of statistical coordination as mandated by the Statistics Act [3, 4]. As its new vision and mission indicate, the department has assumed a leadership position by partnering with other organs of state to advance statistical development in the country. The shift has been widening of statistical production beyond the product of Stats SA to setting up a system to support other organs of state to produce statistics of good quality. The objectives of the shift are to expand the production of statistics in order to increase the supply of official statistics and to address the gap in statistical quality. Of the six strategic objectives of Stats SA, three directly address statistical coordination. The first objective is "to expand the information base by increasing its depth, breadth and geographic spread". The strategy is to translate the government's 12 priority development outcomes identified in the Cabinet Lekgotla of 20-22 January 2010 [5] into Stats SA '10 statistical themes that constitute the universe of statistical production [3:30] (see Table 1). Strategic focus areas include health, education, safety and security, sustainable resource management, rural development, food security and land reform. The second objective is "to enhance public confidence and trust in statistics". Focus areas for this objective include developing a quality management system for the SANSS, setting standards for the SANSS, assessing statistics for quality and certifying them official where applicable, and development and maintenance of dwelling and business frames for standardising data collection areas to enhance data comparability. The third objective is "to lead the development and coordination of statistical production within the SANSS". This is where the SANSS performs a transformation function of the fragmented statistical system to an integrated one focused on the production of official statistics.
